Suppose that you have backed up the data in a TiDB cluster of an earlier version of v6.0.0, and you want to restore this data to a TiDB cluster of v6.0.0 or later versions. In this situation, you need to manually check whether the value of `new_collations_enabled_on_first_bootstrap` is consistent between the upstream and downstream clusters:

- If the value is consistent, you can add `--check-requirements=false` to the restore command to skip this configuration check.
- If the value is inconsistent, and you forcibly perform the restore, BR reports a data validation error.

15.11.5.3 Why does an error occur when I restore placement rules to a cluster?

Before v6.0.0, BR does not support placement rules. Starting from v6.0.0, BR supports placement rules and introduces a command-line option `--with-tidb-placement-mode=strict/ignore` to control the backup and restore mode of placement rules. With the default value `strict`, BR imports and validates placement rules, but ignores all placement rules when the value is `ignore`.

15.11.6 Data restore issues

15.11.6.1 What should I do to handle the `Io(Os...)` error?

Almost all of these problems are system call errors that occur when TiKV writes data to the disk, for example, `Io(Os {code: 13, kind: PermissionDenied...})` or `Io(Os {code: 2, kind: NotFound...})`.

To address such problems, first check the mounting method and the file system of the backup directory, and try to back up data to another folder or another hard disk.

For example, you might encounter the `Code: 22(invalid argument)` error when backing up data to the network disk built by `samba`.

15.11.6.2 What should I do to handle the `rpc error: code = Unavailable desc =... error occurred` in restore?

This error might occur when the capacity of the cluster to restore is insufficient. You can further confirm the cause by checking the monitoring metrics of this cluster or the TiKV log.

To handle this issue, you can try to scale out the cluster resources, reduce the concurrency during restore, and enable the `RATE_LIMIT` option.

15.11.6.3 What should I do if the restore fails with the error message `the entry too large, the max entry size is 6291456, the size of data is 7690800`?

You can try to reduce the number of tables to be created in a batch by setting `--ddl-batch-size` to `128` or a smaller value.

When using BR to restore the backup data with the value of `--ddl-batch-size` greater than `1`, TiDB writes a DDL job of table creation to the DDL jobs queue that is maintained by TiKV. At this time, the total size of all tables schema sent by TiDB at one time should not exceed 6 MB, because the maximum value of job messages is `6 MB` by default (it is **not recommended** to modify this value. For details, see `txn-entry-size-limit` and `raft-entry-max-size`). Therefore, if you set `--ddl-batch-size` to an excessively large value, the schema size of the tables sent by TiDB in a batch at one time exceeds the specified value, which causes BR to report the `entry too large, the max entry size is 6291456, the size of data is 7690800` error.

15.11.6.4 Where are the backed up files stored when I use `local` storage?

> **Note:**
>
> If no Network File System (NFS) is mounted to a BR or TiKV node, or if you use external storage that supports Amazon S3, GCS, or Azure Blob Storage protocols, the data backed up by BR is generated at each TiKV node.**Note that this is not the recommended way to deploy BR**, because the backup data are scattered in the local file system of each node. Collecting the backup data might result in data redundancy and operation and maintenance problems. Meanwhile, if you restore data directly before collecting the backup data, you will encounter the `SST file not found` error.

When you use local storage, `backupmeta` is generated on the node where BR is running, and backup files are generated on the Leader nodes of each Region.

15.11.6.5 What should I do if the error message `could not read local://...:download sst failed` is returned during data restore?

When you restore data, each node must have access to **all** backup files (SST files). By default, if `local` storage is used, you cannot restore data because the backup files are scattered among different nodes. Therefore, you have to copy the backup file of each TiKV node to the other TiKV nodes. **It is recommended that you store backup data to Amazon S3, Google Cloud Storage (GCS), Azure Blob Storage, or NFS**.

15.11.6.6 What should I do to handle the `Permission denied` or `No such file or directory` error, even if I have tried to run `br` using root in vain?

You need to confirm whether TiKV has access to the backup directory. To back up data, confirm whether TiKV has the write permission. To restore data, confirm whether it has the read permission.

During the backup operation, if the storage medium is the local disk or a network file system (NFS), make sure that the user to start `br` and the user to start TiKV are consistent (if `br` and TiKV are on different machines, the users' UIDs must be consistent). Otherwise, the `Permission denied` issue might occur.

Running `br` as the `root` user might fail due to the disk permission, because the backup files (SST files) are saved by TiKV.

> **Note:**
>
> You might encounter the same problem during data restore. When the SST files are read for the first time, the read permission is verified. The execution duration of DDL suggests that there might be a long interval between checking the permission and running `br`. You might receive the error message `Permission denied` after waiting for a long time.

Therefore, it is recommended to check the permission before data restore according to the following steps:

1. Run the Linux command for process query:

```
ps aux | grep tikv-server
```

   The output is as follows:

```
tidb_ouo 9235 10.9 3.8 2019248 622776 ?  Ssl  08:28  1:12 bin/tikv-
    ↪ server --addr 0.0.0.0:20162 --advertise-addr 172.16.6.118:20162
    ↪ --status-addr 0.0.0.0:20188 --advertise-status-addr
    ↪ 172.16.6.118:20188 --pd 172.16.6.118:2379 --data-dir /home/user1/
    ↪ tidb-data/tikv-20162 --config conf/tikv.toml --log-file /home/
    ↪ user1/tidb-deploy/tikv-20162/log/tikv.log
tidb_ouo 9236 9.8  3.8 2048940 631136 ?  Ssl  08:28  1:05 bin/tikv-
    ↪ server --addr 0.0.0.0:20161 --advertise-addr 172.16.6.118:20161
    ↪ --status-addr 0.0.0.0:20189 --advertise-status-addr
    ↪ 172.16.6.118:20189 --pd 172.16.6.118:2379 --data-dir /home/user1/
    ↪ tidb-data/tikv-20161 --config conf/tikv.toml --log-file /home/
    ↪ user1/tidb-deploy/tikv-20161/log/tikv.log
```

Or you can run the following command:

```
ps aux | grep tikv-server | awk '{print $1}'
```

The output is as follows:

```
tidb_ouo
tidb_ouo
```

2. Query the startup information of the cluster using the `tiup` command:

```
tiup cluster list
```

The output is as follows:

```
[root@Copy-of-VM-EE-CentOS76-v1 br]# tiup cluster list
Starting component `cluster`: /root/.tiup/components/cluster/v1.5.2/
    ↪ tiup-cluster list
Name         User     Version Path
    ↪                                        PrivateKey
----         ----     ------- ----
    ↪                                        ----------
tidb_cluster tidb_ouo v5.0.2 /root/.tiup/storage/cluster/clusters/
    ↪ tidb_cluster /root/.tiup/storage/cluster/clusters/tidb_cluster/
    ↪ ssh/id_rsa
```

3. Check the permission for the backup directory. For example, `backup` is for backup data storage:

```
ls -al backup
```

The output is as follows:

```
[root@Copy-of-VM-EE-CentOS76-v1 user1]# ls -al backup
total 0
drwxr-xr-x 2 root root 6 Jun 28 17:48 .
drwxr-xr-x 11 root root 310 Jul 4 10:35 ..
```

From the output of step 2, you can find that the `tikv-server` instance is started by the user `tidb_ouo`. But the user `tidb_ouo` does not have the write permission for `backup`. Therefore, the backup fails.

15.11.6.7 Why are tables in the `mysql` schema not restored?

Starting from BR v5.1.0, when you perform a full backup, BR backs up the **tables in the `mysql` schema**. Before BR v6.2.0, under default configuration, BR only restores user data, but does not restore tables in the **`mysql` schema**.

To restore a table created by the user in the `mysql` schema (not system tables), you can explicitly include the table using table filters. The following example shows how to restore the `mysql.usertable` table when BR performs a normal restore.

```
br restore full -f '*.*' -f '!mysql.*' -f 'mysql.usertable' -s
    ↪ $external_storage_url --with-sys-table
```

In the preceding command,

- `-f '*.*'` is used to override the default rules
- `-f '!mysql.*'` instructs BR not to restore tables in `mysql` unless otherwise stated.
- `-f 'mysql.usertable'` indicates that `mysql.usertable` should be restored.

If you only need to restore `mysql.usertable`, run the following command:

```
br restore full -f 'mysql.usertable' -s $external_storage_url --with-sys-
    ↪ table
```

Note that even if you configures table filter, **BR does not restore the following system tables**:

- Statistics tables (`mysql.stat_*`)
- System variable tables (`mysql.tidb`, `mysql.global_variables`)
- Other system tables

15.11.7 Other things you may want to know about backup and restore

15.11.7.1 What is the size of the backup data? Are there replicas of the backup?

During data backup, backup files are generated on the Leader nodes of each Region. The size of the backup is equal to the data size, with no redundant replicas. Therefore, the total data size is approximately the total number of TiKV data divided by the number of replicas.

However, if you want to restore data from local storage, the number of replicas is equal to that of the TiKV nodes, because each TiKV must have access to all backup files.

15.11.7.2 Why is the disk usage shown on the monitoring node inconsistent after backup or restore using BR?

This inconsistency is caused by the fact that the data compression rate used in backup is different from the default rate used in restore. If the checksum succeeds, you can ignore this issue.

15.11.7.3 After BR restores the backup data, do I need to execute the `ANALYZE` statement on the table to update the statistics of TiDB on the tables and indexes?

BR does not back up statistics (except in v4.0.9). Therefore, after restoring the backup data, you need to manually execute `ANALYZE TABLE` or wait for TiDB to automatically execute `ANALYZE`.

In v4.0.9, BR backs up statistics by default, which consumes too much memory. To ensure that the backup process goes well, the backup for statistics is disabled by default starting from v4.0.10.

If you do not execute `ANALYZE` on the table, TiDB will fail to select the optimal execution plan due to inaccurate statistics. If query performance is not a key concern, you can ignore `ANALYZE`.

15.11.7.4 Can I start multiple restore tasks at the same time to restore the data of a single cluster?

It is strongly not recommended to start multiple restore tasks at the same time to restore the data of a single cluster for the following reasons:

- When BR restores data, it modifies some global configurations of PD. Therefore, if you start multiple restore tasks for data restore at the same time, these configurations might be mistakenly overwritten and cause abnormal cluster status.
- BR consumes a lot of cluster resources to restore data, so in fact, running restore tasks in parallel improves the restore speed only to a limited extent.
- There has been no test for running multiple restore tasks in parallel for data restore, so it is not guaranteed to succeed.

15.11.7.5 Does BR back up the `SHARD_ROW_ID_BITS` and `PRE_SPLIT_REGIONS` information of a table? Does the restored table have multiple Regions?

Yes. BR backs up the `SHARD_ROW_ID_BITS` and `PRE_SPLIT_REGIONS` information of a table. The data of the restored table is also split into multiple Regions.

16 Release Notes

16.1 TiDB Release Notes

16.1.1 6.4

- 6.4.0-DMR: 2022-11-17

16.1.2 6.3

- 6.3.0-DMR: 2022-09-30

16.1.3 6.2

- 6.2.0-DMR: 2022-08-23

16.2 TiDB Release Timeline

This document shows all the released TiDB versions in reverse chronological order.

Version	Release Date
6.1.5	2023-02-28

Version	Release Date
6.1.4	2023-02-08
5.1.5	2022-12-28
6.1.3	2022-12-05
5.3.4	2022-11-24
6.4.0-DMR	2022-11-17
6.1.2	2022-10-24
5.4.3	2022-10-13
6.3.0-DMR	2022-09-30
5.3.3	2022-09-14
6.1.1	2022-09-01
6.2.0-DMR	2022-08-23
5.4.2	2022-07-08
5.3.2	2022-06-29
6.1.0	2022-06-13
5.4.1	2022-05-13
5.2.4	2022-04-26
6.0.0-DMR	2022-04-07
5.3.1	2022-03-03
5.1.4	2022-02-22
5.4.0	2022-02-15
5.0.6	2021-12-31
4.0.16	2021-12-17
5.1.3	2021-12-03
5.0.5	2021-12-03
5.2.3	2021-12-03
5.3.0	2021-11-30
5.2.2	2021-10-29
5.1.2	2021-09-27
5.0.4	2021-09-27
4.0.15	2021-09-27
5.2.1	2021-09-09
5.2.0	2021-08-27
5.1.1	2021-07-30
4.0.14	2021-07-27
5.0.3	2021-07-02
5.1.0	2021-06-24
5.0.2	2021-06-10
4.0.13	2021-05-28
5.0.1	2021-04-24
5.0.0	2021-04-07
4.0.12	2021-04-02
4.0.11	2021-02-26
4.0.10	2021-01-15

Version	Release Date
5.0.0-rc	2021-01-12
3.0.20	2020-12-25

16.3 TiDB Versioning

It is recommended to always upgrade to the latest patch release of your release series.

TiDB offers two release series:

- Long-Term Support Releases
- Development Milestone Releases (introduced in TiDB v6.0.0)

To learn about the support policy for major releases of TiDB, see TiDB Release Support Policy.

16.3.1 Release versioning

TiDB versioning has the form of `X.Y.Z`. `X.Y` represents a release series.

- Since TiDB 1.0, `X` increments every year. Each `X` release introduces new features and improvements.
- `Y` increments from 0. Each `Y` release introduces new features and improvements.

- In the first release of a release series, `Z` is set to 0 by default. For patch releases, `Z` increments from 1.

For the versioning system of TiDB v5.0.0 and earlier versions, refer to Historical versioning.

16.3.2 Long-Term Support releases

Long-Term Support (LTS) versions are released approximately every six months and introduce new features, improvements, bug fixes and security vulnerability fixes.

LTS releases are versioned as `X.Y.Z`. `Z` defaults to 0.

Example versions:

- 6.1.0
- 5.4.0

During the lifecycle of LTS, patch releases are made available on demand. Patch releases contain bug fixes and security vulnerability fixes, and do not introduce new features.

Patch releases are versioned as `X.Y.Z`. `X.Y` is consistent with the corresponding LTS versioning. The patch number `Z` increments from 1.

Example version:

- 6.1.1

v5.1.0, v5.2.0, v5.3.0, v5.4.0 were released only two months after their preceding releases, but all four releases are LTS and provide patch releases.

16.3.3 Development Milestone Releases

Development Milestone Releases (DMR) are released approximately every two months that do not contain LTS. DMR versions introduce new features, improvements and bug fixes. TiDB does not provide patch releases based on DMR, and any related bugs are fixed in the subsequent release series.

DMRs are versioned as `X.Y.Z`. `Z` defaults to 0. A `-DMR` suffix is appended to the version number.

Example version:

- 6.0.0-DMR

16.3.4 Versioning of TiDB ecosystem tools

Some TiDB tools are released together with the TiDB server and use the same version numbering system, such as TiDB Lightning. Some TiDB tools are released separately from the TiDB server and use their own version numbering system, such as TiUP and TiDB Operator.

16.3.5 Historical versioning (deprecated)

16.3.5.1 General Availability releases

General Availability (GA) releases are stable versions of the current release series of TiDB. GA versions are released after Release Candidate (RC) versions. GA can be used in production environments.

Example versions:

- 1.0
- 2.1 GA
- 5.0 GA

16.3.5.2 Release Candidate releases

Release Candidate (RC) releases introduce new features and improvements. RC versions are significantly more stable than Beta versions. RC can be used for early testing, but are not suitable for production.

Example versions:

- RC1
- 2.0-RC1
- 3.0.0-rc.1

16.3.5.3 Beta releases

Beta releases introduces new features and improvements. Beta versions are greatly improved over Alpha versions and have eliminated critical bugs, but still contain some bugs. Beta releases are available for users to test the latest features.

Example versions:

- 1.1 Beta
- 2.1 Beta
- 4.0.0-beta.1

16.3.5.4 Alpha releases

Alpha releases are internal releases for testing and introduce new features and improvements. Alpha releases are the initial versions of the current release series. Alpha releases might have some bugs and are available for users to test the latest features.

Example version:

- 1.1 Alpha

16.4 TiDB Installation Packages

Before deploying TiUP offline, you need to download the binary packages of TiDB at the official download page.

TiDB binary packages are available in amd64 and arm64 architectures. In either architecture, TiDB provides two binary packages: `TiDB-community-server` and `TiDB-community-toolkit`.

The `TiDB-community-server` package contains the following contents.

Content	Change history
tidb-{version}-linux-{arch}.tar.gz	
tikv-{version}-linux-{arch}.tar.gz	
tiflash-{version}-linux-{arch}.tar.gz	
pd-{version}-linux-{arch}.tar.gz	
ctl-{version}-linux-{arch}.tar.gz	
grafana-{version}-linux-{arch}.tar.gz	
alertmanager-{version}-linux-{arch}.tar.gz	
blackbox_exporter-{version}-linux-{arch}.tar.gz	
prometheus-{version}-linux-{arch}.tar.gz	
node_exporter-{version}-linux-{arch}.tar.gz	
tiup-linux-{arch}.tar.gz	
tiup-{version}-linux-{arch}.tar.gz	
local_install.sh	
cluster-{version}-linux-{arch}.tar.gz	
insight-{version}-linux-{arch}.tar.gz	
diag-{version}-linux-{arch}.tar.gz	New in v6.0.0
influxdb-{version}-linux-{arch}.tar.gz	
playground-{version}-linux-{arch}.tar.gz	

Note:

`{version}` depends on the version of the component or server you are in-

stalling. `{arch}` depends on the architecture of the system, which can be `amd64` or `arm64`.

The `TiDB-community-toolkit` package contains the following contents.

Content	Change history
tikv-importer-{version}-linux-{arch}.tar.gz	
pd-recover-{version}-linux-{arch}.tar.gz	
etcdctl	New in v6.0.0
tiup-linux-{arch}.tar.gz

16.5 v6.4

16.5.1 TiDB 6.4.0 Release Notes

Release date: November 17, 2022

TiDB version: 6.4.0-DMR

Quick access: Quick start | Installation packages

In v6.4.0-DMR, the key new features and improvements are as follows:

- Support restoring a cluster to a specific point in time by using `FLASHBACK CLUSTER TO TIMESTAMP` (experimental).
- Support tracking the global memory usage of TiDB instances (experimental).
- Be compatible with the Linear Hash partitioning syntax.
- Support a high-performance and globally monotonic `AUTO_INCREMENT` (experimental).
- Support range selection of array data in the JSON type.
- Accelerate fault recovery in extreme situations such as disk failures and stuck I/O.
- Add the dynamic planning algorithm to determine table join order.
- Introduce a new optimizer hint `NO_DECORRELATE` to control whether to perform decorrelation for correlated subqueries.
- The cluster diagnostics feature becomes GA.
- TiFlash supports the SM4 algorithm for encryption at rest.
- Support using a SQL statement to compact TiFlash replicas of specified partitions in a table immediately.
- Support backing up a TiDB cluster using EBS volume snapshots.
- DM supports writing upstream data source information to the extended columns of the downstream merged table.

16.5.1.1 New features

16.5.1.1.1 SQL

- Support using a SQL statement to compact TiFlash replicas of specified partitions in a table immediately #5315 @hehechen

  Since v6.2.0, TiDB has supported the feature of compacting physical data immediately on a full-table replica of TiFlash. You can choose the right time to manually execute SQL statements to immediately compact the physical data in TiFlash, which helps to reduce storage space and improve query performance. In v6.4.0, we refine the granularity of TiFlash replica data to be compacted and support compacting TiFlash replicas of specified partitions in a table immediately.

  By executing the SQL statement `ALTER TABLE table_name COMPACT [PARTITION ↪ PartitionNameList] [engine_type REPLICA]`, you can immediately compact TiFlash replicas of specified partitions in a table.

  For more information, see User document.

- Support restoring a cluster to a specific point in time by using `FLASHBACK CLUSTER TO ↪ TIMESTAMP` (experimental) #37197 #13303 @Defined2014 @bb7133 @JmPotato @Connor1996 @HuSharp @CalvinNeo

  You can use the `FLASHBACK CLUSTER TO TIMESTAMP` syntax to restore a cluster to a specific point in time quickly within the Garbage Collection (GC) lifetime. This feature helps you to easily and quickly undo DML misoperations. For example, you can use this syntax to restore the original cluster in minutes after mistakenly executing `DELETE` without a `WHERE` clause. This feature does not rely on database backups and supports rolling back data at different time points to determine the exact time when data changes. Note that `FLASHBACK CLUSTER TO TIMESTAMP` cannot replace database backups.

  Before executing `FLASHBACK CLUSTER TO TIMESTAMP`, you need to pause PITR and replication tasks running on such tools as TiCDC and restart them after the `FLASHBACK` is completed. Otherwise, replication tasks might fail.

  For more information, see User document.

- Support restoring a deleted database by using `FLASHBACK DATABASE` #20463 @erwadba

  By using `FLASHBACK DATABASE`, you can restore a database and its data deleted by `DROP` within the garbage collection (GC) life time. This feature does not depend on any external tools. You can quickly restore data and metadata using SQL statements.

  For more information, see User document.

16.5.1.1.2 Security

- TiFlash supports the SM4 algorithm for encryption at rest #5953 @lidezhu

  Add the SM4 algorithm for TiFlash encryption at rest. When you configure encryption at rest, you can enable the SM4 encryption capacity by setting the value of the

`data-encryption-method` configuration to `sm4-ctr` in the `tiflash-learner.toml` configuration file.

For more information, see User document.

16.5.1.1.3 Observability

- Cluster diagnostics becomes GA #1438 @Hawkson-jee

  The cluster diagnostics feature in TiDB Dashboard diagnoses the problems that might exist in a cluster within a specified time range, and summarizes the diagnostic results and the cluster-related load monitoring information into a diagnostic report. This diagnostic report is in the form of a web page. You can browse the page offline and circulate this page link after saving the page from a browser.

  With the diagnostic reports, you can quickly understand the basic health information of the cluster, including the load, component status, time consumption, and configurations. If the cluster has some common problems, you can locate the causes in the result of the built-in automatic diagnosis in the diagnostic information section.

16.5.1.1.4 Performance

- Introduce the concurrency adaptive mechanism for coprocessor tasks #37724 @you06

  As the number of coprocessor tasks increases, based on TiKV's processing speed, TiDB automatically increases concurrency (adjust the value of `tidb_distsql_scan_concurrency` ↪) to reduce the coprocessor task queue and thus reduce latency.

- Add the dynamic planning algorithm to determine table join order #37825 @winoros

  In earlier versions, TiDB uses the greedy algorithm to determine the join order of tables. In v6.4.0, the TiDB optimizer introduces the dynamic planning algorithm. The dynamic planning algorithm can enumerate more possible join orders than the greedy algorithm, so it increases the possibility to find a better execution plan and improves SQL execution efficiency in some scenarios.

  Because the dynamic programming algorithm consumes more time, the selection of the TiDB Join Reorder algorithms is controlled by the `tidb_opt_join_reorder_threshold` ↪ variable. If the number of nodes participating in Join Reorder is greater than this threshold, TiDB uses the greedy algorithm. Otherwise, TiDB uses the dynamic programming algorithm.

  For more information, see User document.

- The prefix index supports filtering null values. #21145 @xuyifangreeneyes

  This feature is an optimization for the prefix index. When a column in a table has a prefix index, the `IS NULL` or `IS NOT NULL` condition of the column in the SQL statement can be directly filtered by the prefix, which avoids table lookup in this case and improves the performance of the SQL execution.

  For more information, see User document.

- Enhance the TiDB chunk reuse mechanism #38606 @keeplearning20221

  In earlier versions, TiDB only reuses chunks in the `writechunk` function. TiDB v6.4.0 extends the chunk reuse mechanism to operators in Executor. By reusing chunks, TiDB does not need to frequently request memory release and SQL queries are executed more efficiently in some scenarios. You can use the system variable `tidb_enable_reuse_chunk` to control whether to reuse chunk objects, which is enabled by default.

  For more information, see User document.

- Introduce a new optimizer hint `NO_DECORRELATE` to control whether to perform decorrelation for correlated subqueries #37789 @time-and-fate

  By default, TiDB always tries to rewrite correlated subqueries to perform decorrelation, which usually improves execution efficiency. However, in some scenarios, decorrelation reduces the execution efficiency. In v6.4.0, TiDB introduces the optimizer hint `NO_DECORRELATE` to tell the optimizer not to perform decorrelation for specified query blocks to improve query performance in some scenarios.

  For more information, see User document.

- Improve the performance of statistics collection on partitioned tables #37977 @Yisaer

  In v6.4.0, TiDB optimizes the strategy of collecting statistics on partitioned tables. You can use the system variable `tidb_auto_analyze_partition_batch_size` to set the concurrency of collecting statistics on partitioned tables in parallel to speed up the collection and shorten the analysis time.

16.5.1.1.5 Stability

- Accelerate fault recovery in extreme situations such as disk failures and stuck I/O #13648 @LykxSassinator

  For enterprise users, database availability is one of the most important metrics. While in complex hardware environments, how to quickly detect and recover from failures has always been one of the challenges of database availability. In v6.4.0, TiDB fully optimizes the state detection mechanism of TiKV nodes. Even in extreme situations such as disk failures and stuck I/O, TiDB can still report node state quickly and use the active wake-up mechanism to launch Leader election in advance, which accelerates cluster self-healing. Through this optimization, TiDB can shorten the cluster recovery time by about 50% in the case of disk failures.

- Global control on TiDB memory usage #37816 @wshwsh12

  In v6.4.0, TiDB introduces global control of memory usage as an experimental feature that tracks the global memory usage of TiDB instances. You can use the system variable `tidb_server_memory_limit` to set the upper limit for the global memory usage. When the memory usage reaches the threshold, TiDB tries to reclaim and release more free memory. When the memory usage exceeds the threshold, TiDB

identifies and cancels the SQL operation that has the highest memory usage to avoid system issues caused by excessive memory usage.

When the memory consumption of TiDB instances has potential risks, TiDB will collect diagnostic information in advance and write it to the specified directory to facilitate the issue diagnosis. At the same time, TiDB provides system table views `INFORMATION_SCHEMA.MEMORY_USAGE` and `INFORMATION_SCHEMA.MEMORY_USAGE_OPS_HISTORY` that show the memory usage and operation history to help you better understand the memory usage.

Global memory control is a milestone in TiDB memory management. It introduces a global view for instances and adopts systematic management for memory, which can greatly enhance database stability and service availability in more key scenarios.

For more information, see User document.

- Control the memory usage of the range-building optimizer #37176 @xuyifangreeneyes

  In v6.4.0, the system variable `tidb_opt_range_max_size` is introduced to limit the maximum memory usage of the optimizer that builds ranges. When the memory usage exceeds the limit, the optimizer will build more coarse-grained ranges instead of more exact ranges to reduce memory consumption. If a SQL statement has many `IN` conditions, this optimization can significantly reduce the memory usage of compiling and ensure system stability.

  For more information, see User document.

- Support synchronously loading statistics (GA) #37434 @chrysan

  TiDB v6.4.0 enables the synchronously loading statistics feature by default. This feature allows TiDB to synchronously load large-sized statistics (such as histograms, TopN, and Count-Min Sketch statistics) into memory when you execute SQL statements, which improves the completeness of statistics for SQL optimization.

  For more information, see User document.

- Reduce the impact of batch write requests on the response time of lightweight transactional writes #13313 @glorv

  The business logic of some systems requires periodic batch DML tasks, but processing these batch write tasks increases the latency of online transactions. In v6.3.0, TiKV optimizes the scheduling of read requests in hybrid workload scenarios, so you can enable the `readpool.unified.auto-adjust-pool-size` configuration item to have TiKV automatically adjust the size of the UnifyReadPool thread pool for all read requests. In v6.4.0, TiKV can dynamically identify and prioritize write requests as well, and control the maximum bytes that the Apply thread can write for one FSM (Finite-state Machine) in one round of poll, thus reducing the impact of batch write requests on the response time of transactional writes.

16.5.1.1.6 Ease of use

- TiKV API V2 becomes generally available (GA) #11745 @pingyu

  Before v6.1.0, TiKV only provides basic Key Value read and write capability because it only stores the raw data passed in by the client. In addition, due to different coding methods and unscoped data ranges, TiDB, Transactional KV, and RawKV cannot be used at the same time in the same TiKV cluster; instead, multiple clusters are needed in this case, thus increasing machine and deployment costs.

  TiKV API V2 provides a new RawKV storage format and access interface, which delivers the following benefits:

  - Store data in MVCC with the change timestamp of the data recorded, based on which Change Data Capture (CDC) is implemented. This feature is experimental and is detailed in TiKV-CDC.
  - Data is scoped according to different usage and API V2 supports co-existence of TiDB, Transactional KV, and RawKV applications in a single cluster.
  - Reserve the Key Space field to support features such as multi-tenancy.

To enable TiKV API V2, set `api-version = 2` in the `[storage]` section of the TiKV configuration file.

For more information, see User document.

- Improve the accuracy of TiFlash data replication progress #4902 @hehechen

  In TiDB, the `PROGRESS` field of the `INFORMATION_SCHEMA.TIFLASH_REPLICA` table is used to indicate the progress of data replication from the corresponding tables in TiKV to the TiFlash replicas. In earlier TiDB versions, the `PROCESS` field only provides the progress of data replication during the creation of the TiFlash replicas. After a TiFlash replica is created, if new data is imported to a corresponding table in TiKV, this field will not be updated to show the replication progress from TiKV to TiFlash for the new data.

  In v6.4.0, TiDB improves the update mechanism of data replication progress for TiFlash replicas. After a TiFlash replica is created, if new data is imported to a corresponding table in TiKV, the `PROGRESS` value in the `INFORMATION_SCHEMA.TIFLASH_REPLICA` table will be updated to show the actual replication progress from TiKV to TiFlash for the new data. With this improvement, you can easily view the actual progress of TiFlash data replication.

  For more information, see User document.

16.5.1.1.7 MySQL compatibility

- Be compatible with the Linear Hash partitioning syntax #38450 @mjonss

  In the earlier version, TiDB has supported the Hash, Range, and List partitioning. Starting from v6.4.0, TiDB can also be compatible with the syntaxt of MySQL Linear Hash partitioning.

  In TiDB, you can execute the existing DDL statements of your MySQL Linear Hash partitions directly, and TiDB will create the corresponding Hash partition tables (note that there is no Linear Hash partition inside TiDB). You can also execute the existing DML statements of your MySQL Linear Hash partitions directly, and TiDB will return the query result of the corresponding TiDB Hash partitions normally. This feature ensures the TiDB syntax compatibility with MySQL Linear Hash partitions and facilitates seamless migration from MySQL-based applications to TiDB.

  If the number of partitions is a power of 2, the rows in a TiDB Hash partitioned table are distributed the same as that in the MySQL Linear Hash partitioned table. Otherwise, the distribution of these rows in TiDB is different from MySQL.

  For more information, see User document.

- Support a high-performance and globally monotonic `AUTO_INCREMENT` (experimental) #38442 @tiancaiamao

  TiDB v6.4.0 introduces the `AUTO_INCREMENT` MySQL compatibility mode. This mode introduces a centralized auto-increment ID allocating service that ensures IDs monotonically increase on all TiDB instances. This feature makes it easier to sort query results by auto-increment IDs. To use the MySQL compatibility mode, you need to set `AUTO_ID_CACHE` to `1` when creating a table. The following is an example:

  ```
  CREATE TABLE t (a INT AUTO_INCREMENT PRIMARY KEY) AUTO_ID_CACHE = 1;
  ```

  For more information, see User document.

- Support range selection of array data in the JSON type #13644 @YangKeao

  Starting from v6.4.0, you can use the MySQL-compatible range selection syntax in TiDB.

  - With the keyword `to`, you can specify the start and end positions of array elements and select elements of a continuous range in an array. With `0`, you can specify the position of the first element in an array. For example, using `$[0 to 2]`, you can select the first three elements of an array.
  - With the keyword `last`, you can specify the position of the last element in an array, which allows you to set the position from right to left. For example, using `$[last-2 to last]`, you can select the last three elements of an array.

This feature simplifies the process of writing SQL statements, further improves the JSON type compatibility, and reduces the difficulty of migrating MySQL applications to TiDB.

- Support adding additional descriptions for database users #38172 @CbcWestwolf

  In TiDB v6.4, you can use the `CREATE USER` or `ALTER USER` to add additional descriptions for database users. TiDB provides two description formats. You can add a text comment using `COMMENT` and add a set of structured attributes in JSON format using `ATTRIBUTE`.

  In addition, TiDB v6.4.0 adds the `USER_ATTRIBUTES` table, where you can view the information of user comments and user attributes.

```
CREATE USER 'newuser1'@'%' COMMENT 'This user is created only for test'
    ↪ ;
CREATE USER 'newuser2'@'%' ATTRIBUTE '{"email": "user@pingcap.com"}';
SELECT * FROM INFORMATION_SCHEMA.USER_ATTRIBUTES;
```

```
+--
    ↪ ---------+------+-------------------------------------------------------+
    ↪
| USER     | HOST | ATTRIBUTE                                             |
+--
    ↪ ---------+------+-------------------------------------------------------+
    ↪
| newuser1 | %    | {"comment": "This user is created only for test"} |
| newuser1 | %    | {"email": "user@pingcap.com"}                     |
+--
    ↪ ---------+------+-------------------------------------------------------+
    ↪
2 rows in set (0.00 sec)
```

  This feature improves TiDB compatibility with MySQL syntax and makes it easier to integrate TiDB into tools or platforms in the MySQL ecosystem.

16.5.1.1.8 Backup and restore

- Support backing up a TiDB cluster using EBS volume snapshots #33849 @fengou1

  If your TiDB cluster is deployed on EKS and uses AWS EBS volumes, and you have the following requirements when backing up TiDB cluster data, you can use TiDB Operator to back up the data by volume snapshots and metadata to AWS S3:

  - Minimize the impact of backup, for example, to keep the impact on QPS and transaction latency less than 5%, and to occupy no cluster CPU and memory.
  - Back up and restore data in a short time. For example, finish backup within 1 hour and restore data in 2 hours.

For more information, see User document.

16.5.1.1.9 Data migration

- DM supports writing upstream data source information to the extended columns of the downstream merged table #37797 @lichunzhu

  When merging sharded schemas and tables from upstream to TiDB, you can manually add several fields (extended columns) in the target table and specify their values when configuring the DM task. For example, if you specify the names of the upstream sharded schema and table for the extended columns, the data written to the downstream by DM will include the schema name and table name. When the downstream data looks unusual, you can use this feature to quickly locate the data source information in the target table, such as the schema name and table name.

  For more information, see Extract table, schema, and source information and write into the merged table.

- DM optimizes the pre-check mechanism by changing some mandatory check items to optional ones #7333 @lichunzhu

  To run a data migration task smoothly, DM triggers a precheck automatically at the start of the task and returns the check results. DM starts the migration only after the precheck is passed.

  In v6.4.0, DM changes the following three check items from mandatory to optional, which improves the pass rate of the pre-check:

  - Check whether the upstream tables use character sets that are incompatible with TiDB.
  - Check whether the upstream tables have primary key constraints or unique key constraints
  - Check whether the database ID `server_id` for the upstream database has been specified in the primary-secondary configuration.

- DM supports configuring binlog position and GTID as optional parameters for incremental migration tasks #7393 @GMHDBJD

  Since v6.4.0, you can perform incremental migration directly without specifying the binlog position or GTID. DM automatically obtains the binlog files generated after the task starts from upstream and migrates these incremental data to the downstream. This relieves users from laborious understanding and complicated configuration.

  For more information, see DM Advanced Task Configuration File.

- DM adds more status indicators for migration tasks #7343 @okJiang

  In v6.4.0, DM adds more performance and progress indicators for migration tasks, which helps you understand the migration performance and progress more intuitively and provides you with a reference for troubleshooting.

  - Add status indicators (in bytes/s) showing data importing and exporting performance.

- Rename the performance indicator for writing data to the downstream database from TPS to RPS (in rows/s).
- Add progress indicators showing the data export progress of DM full migration tasks.

For more information about these indicators, see Query Task Status in TiDB Data Migration.

16.5.1.1.10 TiDB data share subscription

- TiCDC supports replicating data to Kafka of the `3.2.0` version #7191 @3AceShowHand

  From v6.4.0, TiCDC supports replicating data to Kafka of the `3.2.0` version and earlier.

16.5.1.2 Compatibility changes

16.5.1.2.1 System variables

Variable name	Change type	Description

Variable name	Change type	Description

tidb_constraint_check_in_place_pessimistic ↪	Modified	Removes the GLOBAL scope and allows you to modify the default value using the pessimistic ↪ - ↪ txn ↪ . ↪ constraint ↪ - ↪ check ↪ -in ↪ - ↪ place ↪ - ↪ pessimistic ↪ configuration item. This variable controls when TiDB checks the unique constraints in pessimistic trans-ac-

Variable name	Change type	Description
tidb_ddl_flashback_concurrency ↪	Modified	Takes effect starting from v6.4.0 and controls the concurrency of FLASHBACK ↪ ↪ CLUSTER ↪ TO ↪ ↪ TIMESTAMP ↪ . The default value is 64.

Variable name	Change type	Description
`tidb_enable_clustered_index` ↪	Modified	Changes the default value from `INT_ONLY` ↪ to `ON`, meaning that primary keys are created as clustered indexes by default.

Variable name	Change type	Description
tidb_enable_paging ↪	Modified	Changes the default value from OFF to ON, meaning that the method of paging to send coprocessor requests is used by default.
tidb_enable_prepared_plan_cache ↪	Modified	Adds the SESSION scope. This variable controls whether to enable Prepared Plan Cache.

Variable name	Change type	Description
`tidb_memory_usage_alarm_ratio` ↪	Modified	Changes the default value from `0.8` to `0.7`. This variable controls the memory usage ratio that triggers the tidb-server memory alarm.

Variable name	Change type	Description
`tidb_opt_agg_push_down` ↪	Modified	Adds the GLOBAL scope. This variable controls whether the optimizer executes the optimization operation of pushing down the aggregate function to the position before Join, Projection, and UnionAll.

Variable name	Change type	Description
`tidb_prepared_plan_cache_size` ↪	Modified	Adds the SESSION scope. This variable controls the maximum number of plans that can be cached in a session.

Variable name	Change type	Description
`tidb_stats_load_sync_wait` ↪	Modified	Changes the default value from `0` to `100`, meaning that the SQL execution can wait for at most 100 milliseconds by default to synchronously load complete column statistics.

Variable name	Change type	Description
tidb_stats_load_pseudo_timeout ↪	Modified	Changes the default value from OFF to ON, meaning that the SQL optimization gets back to using pseudo statistics after reaching the timeout of synchronously loading complete column statistics.

Variable name	Change type	Description
`last_sql_used_cached_chunk` ↪	Newly added	Shows whether the previous statement uses a cached chunk object (chunk allocation). This variable is read-only and the default value is `OFF`.

Variable name	Change type	Description
tidb_auto_analyze_partition_batch_size ↪	Newly added	Specifies the number of partitions that TiDB can automatically analyzes at a time when analyzing a partitioned table (which means automatically collecting statistics on a partitioned table). The default value is 1.

Variable name	Change type	Description
tidb_enable_external_ts_read ↪	Newly added	Controls whether TiDB reads data with the timestamp specified by tidb_external_ts ↪ . The default value is OFF.
tidb_enable_gogc_tuner ↪	Newly added	Controls whether to enable GOGC Tuner. The default value is ON.

Variable name	Change type	Description
`tidb_enable_reuse_chunk` ↪	Newly added	Controls whether TiDB enables chunk objects cache. The default value is `ON`, meaning that TiDB prefers to use the cached chunk object and only requests from the system if the requested object is not in the cache. If the value is `OFF`, TiDB requests chunk objects from the system directly.

Variable name	Change type	Description
tidb_enable_prepared_plan_cache_memory_monitor ↪	Newly added	Controls whether to count the memory consumed by the execution plans cached in the Prepared Plan Cache. The default value is `ON`.

Variable name	Change type	Description
`tidb_external_ts` ↪	Newly added	The default value is `0`. If `tidb_enable_external_ts_read` ↪ is set to `ON`, TiDB reads data with the timestamp specified by this variable.

Variable name	Change type	Description
tidb_gogc_memory_threshold ↪	Newly added	Specifies the maximum memory threshold for tuning GOGC. When the memory exceeds this threshold, GOGC Tuner stops working. The default value is 0.6.

Variable name	Change type	Description
`tidb_memory_usage_alarm_keep_record_num` ↪	Newly added	When the tidb-server memory usage exceeds the memory alarm threshold and triggers an alarm, TiDB only retains the status files generated during the recent 5 alarms by default. You can adjust this number with this variable.

Variable name	Change type	Description
`tidb_opt_prefix_index_single_scan` ↪	Newly added	Controls whether the TiDB optimizer pushes down some filter conditions to the prefix index to avoid unnecessary table lookup and to improve query performance. The default value is `ON`.

Variable name	Change type	Description
`tidb_opt_range_max_size` ↪	Newly added	Specifies the upper limit of memory usage for the optimizer to construct a scan range. The default value is `67108864` ↪ (64 MiB).

Variable name	Change type	Description
`tidb_server_memory_limit` ↪	Newly added	Controls the upper limit of memory usage for the optimizer to build scan ranges (experimental). The default value is `0`, meaning that there is no memory limit.

Variable name	Change type	Description
tidb_server_memory_limit_gc_trigger ↪	Newly added	Controls the threshold at which TiDB tries to trigger GC (experimental). The default value is 70%.

Variable name	Change type	Description
tidb_server_memory_limit_sess_min_size ↪	Newly added	After you enable the memory limit, TiDB will terminate the SQL statement with the highest memory usage on the current instance. This variable specifies the minimum memory usage of the SQL statement to be terminated. The default value is 134217728 ↪

Variable name	Change type	Description

16.5.1.2.2 Configuration file parameters

Configuration file	Configuration parameter	Change type	Description
TiDB	`tidb_memory_usage_alarm_ratio`	Deleted	This configuration item is no longer effective.
TiDB	`memory-usage-alarm-ratio`	Deleted	Replaced by the system variable `tidb_memory_usage_alarm_ratio`. If this configuration item has been configured in a TiDB version earlier than v6.4.0, it will not take effect after the upgrade.

Configuration file	Configuration parameter	Change type	Description
TiDB	pessimistic-txn.constraint-check-in-pessimistic	Newly added	Controls the default value of the system variable tidb_constraint_check_in_place_pessimistic. The default value is true.
TiDB	tidb-max-reuse-chunk	Newly added	Controls the maximum cached chunk objects of chunk allocation. The default value is 64.
TiDB	tidb-max-reuse-column	Newly added	Controls the maximum cached column objects of chunk allocation. The default value is 256.

Configuration file	Configuration parameter	Change type	Description
TiKV	`cdc.raw-min-ts-outlier-threshold`	Deprecated	This configuration item is no longer effective.
TiKV	`causal-ts.alloc-ahead-buffer`	Newly added	The pre-allocated TSO cache size (in duration). The default value is `3s`.
TiKV	`causal-ts.renew-batch-max-size`	Newly added	Controls the maximum number of TSOs in a timestamp request. The default value is `8192`.

Configuration file	Configuration parameter	Change type	Description
TiKV	`raftstore` ↪ `.` ↪ `apply` ↪ `-` ↪ `yield` ↪ `-` ↪ `write` ↪ `-` ↪ `size`	Newly added	Controls the maximum number of bytes that the Apply thread can write for one FSM (Finite-state Machine) in one round of poll. The default value is `32KiB`. This is a soft limit.

Configuration file	Configuration parameter	Change type	Description
PD	`tso-update-physical-interval`	Newly added	Takes effect starting from v6.4.0 and controls the interval at which PD updates the physical time of TSO. The default value is `50ms`.
TiFlash	`data-encryption-method`	Modified	Introduces a new value option `sm4-ctr`. When this configuration item is set to `sm4-ctr`, data is encrypted using SM4 before being stored.

Configuration file	Configuration parameter	Change type	Description
DM	routes. ↪ route ↪ - ↪ rule ↪ -1. ↪ extract ↪ - ↪ table ↪	Newly added	Optional. Used in the sharding scenario for extracting the source information of sharded tables. The extracted information will be written to the merged table in the downstream to identify the data source. If this parameter is configured, you need to manually create a merged table in the downstream in advance.

Configuration file	Configuration parameter	Change type	Description
DM	routes. ↪ route ↪ - ↪ rule ↪ -1. ↪ extract ↪ - ↪ schema ↪	Newly added	Optional. Used in the sharding scenario for extracting the source information of sharded schemas. The extracted information will be written to the merged table in the downstream to identify the data source. If this parameter is configured, you need to manually create a merged table in the downstream in advance.

Configuration file	Configuration parameter	Change type	Description
DM	routes. ↪ route ↪ - ↪ rule ↪ -1. ↪ extract ↪ - ↪ source ↪	Newly added	Optional. Used in the sharding scenario for extracting the source instance information. The extracted information will be written to the merged table in the downstream to identify the data source. If this parameter is configured, you need to manually create a merged table in the downstream in advance.

Configuration file	Configuration parameter	Change type	Description
TiCDC	`transaction` ↪ `-` ↪ `atomicity` ↪	Modified	Changes the default value from `table` to `none`. This change helps reduce replication latency and OOM risks. In addition, TiCDC now only splits a few transactions (the size of a single transaction exceeds 1024 rows), instead of all transactions.

16.5.1.2.3 Others

- Starting from v6.4.0, the `mysql.user` table adds two new columns: `User_attributes` and `Token_issuer`. If you restore system tables in the `mysql` schema from backup data

of earlier TiDB versions to TiDB v6.4.0, BR will report the `column count mismatch` ↪ error for the `mysql.user` table. If you do not restore system tables in the `mysql` schema, this error will not be reported.

- For files whose names match the format of Dumpling exported files but end with uncompressed formats (such as `test-schema-create.sql.origin` and `test.table` ↪ `-schema.sql.origin`), the way how TiDB Lightning handles them is changed. Before v6.4.0, if the files to be imported include such files, TiDB Lightning skips importing such files. Starting from v6.4.0, TiDB Lightning assumes that such files use unsupported compression formats, so the import task will fail.
- Starting with v6.4.0, only the changefeed with the `SYSTEM_VARIABLES_ADMIN` or `SUPER` privilege can use the TiCDC Syncpoint feature.

16.5.1.3 Improvements

- TiDB
  - Allow modifying the noop variable `lc_messages` #38231 @djshow832
  - Support the `AUTO_RANDOM` column as the first column of the clustered composite index #38572 @tangenta
  - Use pessimistic transactions in internal transaction retry to avoid retry failure and reduce time consumption #38136 @jackysp
- TiKV
  - Add a new configuration item `apply-yield-write-size` to control the maximum number of bytes that the Apply thread can write for one Finite-state Machine in one round of poll, and relieve Raftstore congestion when the Apply thread writes a large volume of data #13313 @glorv
  - Warm up the entry cache before migrating the leader of Region to avoid QPS jitter during the leader transfer process #13060 @cosven
  - Support pushing down the `json_constains` operator to Coprocessor #13592 @lizhenhuan
  - Add the asynchronous function for `CausalTsProvider` to improve the flush performance in some scenarios #13428 @zeminzhou
- PD
  - The v2 algorithm of the hot Region scheduler becomes GA. In some scenarios, the v2 algorithm can achieve better balancing in both configured dimensions and reduce invalid scheduling #5021 @HundunDM
  - Optimize the timeout mechanism of operator step to avoid premature timeout #5596 @bufferflies
  - Improve the performance of the scheduler in large clusters #5473 @bufferflies
  - Support using external timestamp which is not provided by PD #5637 @lhy1024

- TiFlash
  - Refactor the TiFlash MPP error handling logic to further improve the stability of MPP #5095 @windtalker
  - Optimize the sorting of the TiFlash computation process, and optimize the key handling for Join and Aggregation #5294 @solotzg
  - Optimize the memory usage for decoding and remove redundant transfer columns to improve Join performance #6157 @yibin87
- Tools
  - TiDB Dashboard
    - Support displaying TiFlash metrics on the Monitoring page and optimize the presentation of metrics on that page #1440 @YiniXu9506
    - Show the number of rows for results in the Slow Query list and SQL Statement list #1443 @baurine
    - Optimize the Dashboard to not report the Alertmanager errors when Alertmanager does not exist #1444 @baurine
  - Backup & Restore (BR)
    - Improve the mechanism for loading the metadata. The metadata is loaded into memory only when necessary, which significantly reduces the memory usage during PITR #38404 @YuJuncen
  - TiCDC
    - Support replicating the exchange partition DDL statements #639 @asddongmen
    - Improve non-batch sending performance for the MQ sink module #7353 @hi-rustin
    - Improve performance of TiCDC puller when a table has a large number of Regions #7078 #7281 @sdojjy
    - Support reading historical data in the downstream TiDB by using the `tidb_enable_external_ts_read` variable when Syncpoint is enabled #7419 @asddongmen
    - Enable transaction split and disable safeMode by default to improve the replication stability #7505 @asddongmen
  - TiDB Data Migration (DM)
    - Remove the useless `operate-source update` command from dmctl #7246 @buchuitoudegou
    - Fix the issue that DM full import fails if the upstream database uses DDL statements that are incompatible with TiDB. You can create the schema of target tables in TiDB manually in advance using DDL statements supported by TiDB to ensure successful import #37984 @lance6716
  - TiDB Lightning
    - Optimize the file scanning logic to accelerate the scan of schema files #38598 @dsdashun

16.5.1.4 Bug fixes

- TiDB
  - Fix the potential issue of index inconsistency that occurs after you create a new index #38165 @tangenta
  - Fix a permission issue of the `INFORMATION_SCHEMA.TIKV_REGION_STATUS` table #38407 @CbcWestwolf
  - Fix the issue that the `grantor` field is missing in the `mysql.tables_priv` table #38293 @CbcWestwolf
  - Fix the issue that the join result of common table expressions might be wrong #38170 @wjhuang2016
  - Fix the issue that the union result of common table expressions might be wrong #37928 @YangKeao
  - Fix the issue that the information in the **transaction region num** monitoring panel is incorrect #38139 @jackysp
  - Fix the issue that the system variable `tidb_constraint_check_in_place_pessimistic` ↪ might affect internal transactions. The variable scope is modified to SESSION. #38766 @ekexium
  - Fix the issue that conditions in a query are mistakenly pushed down to projections #35623 @Reminiscent
  - Fix the issue that the wrong `isNullRejected` check results for `AND` and `OR` cause wrong query results #38304 @Yisaer
  - Fix the issue that `ORDER BY` in `GROUP_CONCAT` is not considered when the outer join is eliminated, which causes wrong query results #18216 @winoros
  - Fix the issue of the wrong query result that occurs when the mistakenly pushed-down conditions are discarded by Join Reorder #38736 @winoros
- TiKV
  - Fix the issue that TiDB fails to start on Gitpod when there are multiple `cgroup` and `mountinfo` records #13660 @tabokie
  - Fix the wrong expression of a TiKV metric `tikv_gc_compaction_filtered` #13537 @Defined2014
  - Fix the performance issue caused by the abnormal `delete_files_in_range` #13534 @tabokie
  - Fix abnormal Region competition caused by expired lease during snapshot acquisition #13553 @SpadeA-Tang
  - Fix errors occurred when `FLASHBACK` fails in the first batch #13672 #13704 #13723 @HuSharp
- PD
  - Fix inaccurate Stream timeout and accelerate leader switchover #5207 @CabinfeverB

- TiFlash
  - Fix the OOM issue due to oversized WAL files that occurs when PageStorage GC does not clear the Page deletion marker properly #6163 @JaySon-Huang
- Tools
  - TiDB Dashboard
    * Fix the TiDB OOM issue when querying execution plans of certain complex SQL statements #1386 @baurine
    * Fix the issue that the Top SQL switch might not take effect when NgMonitoring loses the connection to the PD nodes #164 @zhongzc
  - Backup & Restore (BR)
    * Fix the restoration failure issue caused by PD leader switch during the restoration process #36910 @MoCuishle28
    * Fix the issue that the log backup task cannot be paused #38250 @joccau
    * Fix the issue that when BR deletes log backup data, it mistakenly deletes data that should not be deleted #38939 @Leavrth
    * Fix the issue that BR fails to delete data when deleting the log backup data stored in Azure Blob Storage or Google Cloud Storage for the first time #38229 @Leavrth
  - TiCDC
    * Fix the issue that `sasl-password` in the `changefeed query` result is not masked #7182 @dveeden
    * Fix the issue that TiCDC might become unavailable when too many operations in an etcd transaction are committed #7131 @asddongmen
    * Fix the issue that redo logs might be deleted incorrectly #6413 @asddongmen
    * Fix performance regression when replicating wide tables in Kafka Sink V2 #7344 @hi-rustin
    * Fix the issue that checkpoint ts might be advanced incorrectly #7274 @hi-rustin
    * Fix the issue that too many logs are printed due to improper log level of the mounter module #7235 @hi-rustin
    * Fix the issue that a TiCDC cluster might have two owners #4051 @asddongmen
  - TiDB Data Migration (DM)
    * Fix the issue that DM WebUI generates the wrong `allow-list` parameter #7096 @zoubingwu
    * Fix the issue that a DM-worker has a certain probability of triggering data race when it starts or stops #6401 @liumengya94
    * Fix the issue that when DM replicates an `UPDATE` or `DELETE` statement but the corresponding row data does not exist, DM silently ignores the event #6383 @GMHDBJD

    * Fix the issue that the `secondsBehindMaster` field is not displayed after you run the `query-status` command #7189 @GMHDBJD
    * Fix the issue that updating the checkpoint may trigger a large transaction #5010 @lance6716
    * Fix the issue that in full task mode, when a task enters the sync stage and fails immediately, DM may lose upstream table schema information #7159 @lance6716
    * Fix the issue that deadlock may be triggered when the consistency check is enabled #7241 @buchuitoudegou
    * Fix the issue that task precheck requires the `SELECT` privilege for the `INFORMATION_SCHEMA` table #7317 @lance6716
    * Fix the issue that an empty TLS configuration causes an error #7384 @liumengya94

  – TiDB Lightning

    * Fix the import performance degradation when importing the Apache Parquet files to the target tables that contain the string type columns in the`binary` encoding format #38351 @dsdashun

  – TiDB Dumpling

    * Fix the issue that Dumpling might time out when exporting a lot of tables #36549 @lance6716
    * Fix lock errors reported when consistency lock is enabled but the upstream has no target table #38683 @lance6716

16.6 v6.3

16.6.1 TiDB 6.3.0 Release Notes

Release date: September 30, 2022

TiDB version: 6.3.0-DMR

Quick access: Quick start | Installation packages

In v6.3.0-DMR, the key new features and improvements are as follows:

- TiKV supports encryption at rest using the SM4 algorithm.
- TiDB supports authentication using the SM3 algorithm.
- The `CREATE USER` and `ALTER USER` statements support the `ACCOUNT LOCK/UNLOCK` option.
- JSON data type and functions become generally available (GA).
- TiDB supports null-aware anti join.
- TiDB provides execution time metrics at a finer granularity.
- A new syntactic sugar is added to simplify Range partition definitions.
- Range COLUMNS partitioning supports defining multiple columns.
- The performance of adding indexes is tripled.
- Reduce the impact of resource-consuming queries on the response time of lightweight queries by more than 50%.

16.6.1.1 New features

16.6.1.1.1 SQL

- Add a new syntactic sugar (Range INTERVAL partitioning) to simplify Range partition definitions (experimental) #35683 @mjonss

  TiDB provides INTERVAL partitioning as a new way of defining Range partitions. You do not need to enumerate all partitions, which drastically reduces the length of Range partitioning DDL statements. The syntax is equivalent to that of the original Range partitioning.

- Range COLUMNS partitioning supports defining multiple columns #36636 @mjonss

  TiDB supports PARTITION BY RANGE COLUMNS (column_list). `column_list` is no longer limited to a single column. The basic feature is the same as MySQL.

- EXCHANGE PARTITION becomes GA #35996 @ymkzpx

- Support pushdown of two more window functions to TiFlash #5579 @SeaRise

  - `LEAD()`
  - `LAG()`

- Provide lightweight metadata lock to improve the DML success rate during DDL change (experimental) #37275 @wjhuang2016

  TiDB uses the online asynchronous schema change algorithm to support changing metadata objects. When a transaction is executed, it obtains the corresponding metadata snapshot at the transaction start. If the metadata is changed during a transaction, to ensure data consistency, TiDB returns an `Information schema is changed` error and the transaction fails to commit. To solve the problem, TiDB v6.3.0 introduces metadata lock into the online DDL algorithm. To avoid DML errors whenever possible, TiDB coordinates the priority of DMLs and DDLs during table metadata change, and makes executing DDLs wait for the DMLs with old metadata to commit.

- Improve the performance of adding indexes and reduce its impact on DML transactions (experimental) #35983 @benjamin2037

  To improve the speed of backfilling when creating an index, TiDB v6.3.0 accelerates the `ADD INDEX` and `CREATE INDEX` DDL operations when the `tidb_ddl_enable_fast_reorg` ↪ system variable is enabled. When the feature is enabled, the performance of adding indexes is about tripled.

16.6.1.1.2 Security

- TiKV supports the SM4 algorithm for encryption at rest #13041 @jiayang-zheng

  Add the SM4 algorithm for TiKV encryption at rest. When you configure encryption at rest, you can enable the SM4 encryption capacity by setting the value of the `data-` ↪ `encryption-method` configuration to `sm4-ctr`.

- TiDB supports authentication with the SM3 algorithm #36192 @CbcWestwolf

  TiDB adds an authentication plugin `tidb_sm3_password` based on the SM3 algorithm. When this plugin is enabled, the user password is encrypted and validated using the SM3 algorithm.

- TiDB JDBC supports authentication with the SM3 algorithm #25 @lastincisor

  Authenticating the user password needs client-side support. Now because JDBC supports the SM3 algorithm, you can connect to TiDB using SM3 authentication via TiDB-JDBC.

16.6.1.1.3 Observability

- TiDB provides fine-grained metrics of SQL query execution time #34106 @cfzjywxk

  TiDB v6.3.0 provides fine-grained data metrics for detailed observation of execution time. Through the complete and segmented metrics, you can clearly understand the main time consumption of SQL queries, and then quickly find key problems and save time in troubleshooting.

- Enhanced output for slow logs and `TRACE` statements #34106 @cfzjywxk

  TiDB v6.3.0 enhances the output of slow logs and `TRACE`. You can observe the full-link duration of SQL queries from TiDB parsing to KV RocksDB writing to disk, which further enhances the diagnostic capabilities.

- TiDB Dashboard provides deadlock history information #34106 @cfzjywxk

  From v6.3.0, TiDB Dashboard provides deadlock history. If you check the slow log in TiDB Dashboard and find the lock waiting time of some SQL statements to be excessively long, you can check the deadlock history to locate the root cause, which makes your diagnosis easier.

16.6.1.1.4 Performance

- TiFlash changes the way of using FastScan (experimental) #5252 @hongyunyan

  In v6.2.0, TiFlash introduces the FastScan feature, which brings expected performance improvements but lacks flexibility in use. Therefore, in v6.3.0, TiFlash changes the way of using FastScan: the `ALTER TABLE ... SET TIFLASH MODE ...` syntax to enable or disable FastScan is deprecated. Instead, you can use the system variable `tiflash_fastscan` to easily control whether to enable FastScan.

  When you upgrade from v6.2.0 to v6.3.0, all FastScan settings in v6.2.0 will become invalid, but will not affect the normal reading of data. You need to set the variable `tiflash_fastscan`. When you upgrade from v6.2.0 or an earlier version to v6.3.0, the FastScan feature is not enabled by default for all sessions to keep data consistency.

- TiFlash optimizes data scanning performance in scenarios of multiple concurrency tasks #5376 @JinheLin

  TiFlash reduces duplicate reads of the same data by combining read operations of the same data. It optimizes the resource overhead and improves the performance of data scanning in the case of concurrent tasks. For multiple concurrent tasks, it avoids the situation where each task needs to read the same data separately, and avoids the possibility of multiple reads of the same data at the same time.

  This feature is experimental in v6.2.0, and becomes GA in v6.3.0.

- TiFlash improves performance of data replication #5237 @breezewish

  TiFlash uses the Raft protocol for data replication from TiKV. Prior to v6.3.0, it often took a long time to replicate large amounts of replica data. TiDB v6.3.0 optimizes the TiFlash data replication mechanism and significantly improves the replication speed. When you use BR to recover data, use TiDB Lightning to import data, or add new TiFlash replicas, the TiFlash replicas can be replicated more quickly. You can query with TiFlash in a more timely manner. In addition, TiFlash replicas will also reach a secure and balanced state faster when you scale up, scale down, or modify the number of TiFlash replicas.

- TiFlash supports three-stage aggregation of individual `COUNT(DISTINCT)` #37202 @fixdb

  TiFlash supports rewriting queries containing only one `COUNT(DISTINCT)` into a three-stage aggregation. This improves concurrency and performance.

- TiKV supports log recycling #214 @LykxSassinator

  TiKV supports recycling log files in Raft Engine. This reduces the long tail latency in network disks during Raft log appending and improves performance under write workloads.

- TiDB supports null-aware anti join #37525 @Arenatlx

  TiDB v6.3.0 introduces a new join type Null-aware anti join (NAAJ). NAAJ can be aware of whether the collection is empty or `NULL` when processing collection operations. This optimizes the execution efficiency of operations such as `IN` and `= ANY` and improves SQL performance.

- Add optimizer hints to control the build end of Hash Join #35439 @Reminiscent

  In v6.3.0, the TiDB optimizer introduces 2 hints, `HASH_JOIN_BUILD()` and `HASH_JOIN_PROBE()`, to specify the Hash Join, its probe end, and its build end. When the optimizer fails to select the optimal execution plan, you can use these hints to intervene with the plan.

- Support session-level common table expressions (CTE) inline #36514 @elsa0520

  TiDB v6.2.0 introduced the `MERGE` hint in optimizers to allow CTE inline, so that the consumers of a CTE query result can execute it in parallel in TiFlash. In v6.3.0, a session variable `tidb_opt_force_inline_cte` is introduced to allow CTE inline in sessions. This can greatly improve the ease of use.

16.6.1.1.5 Transactions

- Support deferring checks of unique constraints in pessimistic transactions #36579 @ekexium

  You can use the `tidb_constraint_check_in_place_pessimistic` system variable to control when TiDB checks unique constraints in pessimistic transactions. This variable is disabled by default. When the variable is enabled (set to `ON`), TiDB will defer locking operations and unique constraint checks in pessimistic transactions until necessary, thus improving the performance of bulk DML operations.

- Optimize the way of fetching TSO in the Read-Committed isolation level #36812 @TonsnakeLin

  In the Read-Committed isolation level, the system variable `tidb_rc_write_check_ts` is introduced to control how TSO is fetched. In the case of Plan Cache hit, TiDB improves the execution efficiency of batch DML statements by reducing the frequency of fetching TSO, and reduces the execution time of running tasks in batch.

16.6.1.1.6 Stability

- Reduce the impact of resource-consuming queries on the response time of lightweight queries #13313 @glorv

  When resource-consuming queries and lightweight queries are executed at the same time, the response time of lightweight queries is affected. In this case, to ensure the quality of transactional services, lightweight queries are expected to be processed by TiDB first. In v6.3.0, TiKV optimizes the scheduling mechanism of read requests, so that the execution time of resource-consuming queries in each round can meet expectations. This drastically reduces the impact of resource-consuming queries on the response time of lightweight queries and reduces P99 latency by more than 50% for mixed workload scenarios.

- Modify the default policy of loading statistics when statistics become outdated #27601 @xuyifangreeneyes

  In v5.3.0, TiDB introduced the system variable `tidb_enable_pseudo_for_outdated_stats` ↪ to control how the optimizer behaves when the statistics become outdated. The default value is `ON`, which means keeping the behavior of the old version: When the statistics on objects that are involved in a SQL statement are outdated, the optimizer considers that statistics (other than the total number of rows on the table) are no longer reliable and uses pseudo statistics instead. After tests and analyses of actual user scenarios, the default value of `tidb_enable_pseudo_for_outdated_stats` is changed to `OFF` since v6.3.0. Even if the statistics become outdated, the optimizer will still use the statistics on the table, which makes the execution plan more stable.

- Disabling Titan becomes GA @tabokie

  You can disable Titan for online TiKV nodes.

- Use `static` partition pruning when GlobalStats are not ready #37535 @Yisaer

  When `dynamic pruning` is enabled, the optimizer selects execution plans based on GlobalStats. Before GlobalStats are fully collected, using pseudo statistics might cause performance regression. In v6.3.0, this issue is addressed by maintaining the `static` mode if you enable dynamic pruning before GlobalStats are collected. TiDB remains in the `static` mode until GlobalStats are collected. This ensures performance stability when you change the partition pruning settings.

16.6.1.1.7 Ease of use

- Address the conflict between SQL-based data Placement Rules and TiFlash replicas #37171 @lcwangchao

  TiDB v6.0.0 provides SQL-based data Placement Rules. But this feature conflicts with TiFlash replicas due to implementation issues. TiDB v6.3.0 optimizes the implementation mechanisms, and resolves the conflict between SQL-based data Placement Rules and TiFlash.

16.6.1.1.8 MySQL compatibility

- Improve MySQL 8.0 compatibility by adding support for four regular expression functions: `REGEXP_INSTR()`, `REGEXP_LIKE()`, `REGEXP_REPLACE()`, and `REGEXP_SUBSTR()` #23881 @windtalker

  For more details about the compatibility with MySQL, see Regular expression compatibility with MySQL.

- The `CREATE USER` and `ALTER USER` statements support the `ACCOUNT LOCK/UNLOCK` option #37051 @CbcWestwolf

  When you create a user using the `CREATE USER` statement, you can specify whether the created user is locked using the `ACCOUNT LOCK/UNLOCK` option. A locked user cannot log in to the database.

  You can modify the lock state of an existing user using the `ACCOUNT LOCK/UNLOCK` option in the `ALTER USER` statement.

- JSON data type and JSON functions become GA #36993 @xiongjiwei

  JSON is a popular data format adopted by a large number of programs. TiDB has introduced the JSON support as an experimental feature since an earlier version, compatible with MySQL's JSON data type and some JSON functions.

  In TiDB v6.3.0, the JSON data type and functions become GA, which enriches TiDB's data types, supports using JSON functions in expression indexes and generated-columns, and further improves TiDB's compatibility with MySQL.

16.6.1.1.9 Backup and restore

- PITR supports GCS and Azure Blob Storage as backup storages @joccau

  If your TiDB cluster is deployed on GCP or Azure, you can use the PITR feature after upgrading your cluster to v6.3.0.

- BR supports AWS S3 Object Lock #13442 @3pointer

  You can protect backup data on AWS from being tampered with or deleted by enabling S3 Object Lock.

16.6.1.1.10 Data migration

- TiDB Lightning supports importing Parquet files exported by Apache Hive into TiDB #37536 @buchuitoudegou

- DM adds a new configuration item `safe-mode-duration` #6224 @okJiang

  This configuration item is added to the task configuration file. You can adjust the automatic safe mode duration after DM exits abnormally. The default value is 60 seconds. If `safe-mode-duration` is set to `"0s"`, an error is reported when DM tries to enter safe mode after an abnormal restart.

16.6.1.1.11 TiDB data share subscription

- TiCDC supports a deployment topology that can replicate data from multiple geo-distributed data sources #5301 @sdojjy

  To support replicating data from a single TiDB cluster to multiple geo-distributed data systems, starting from v6.3.0, you can deploy TiCDC in multiple IDCs to replicate data for each IDC. This feature helps deliver the capability of geo-distributed data replication and deployment topology.

- TiCDC supports keeping the snapshots consistent between the upstream and the downstream (sync point) #6977 @asddongmen

  In the scenarios of data replication for disaster recovery, TiCDC supports periodically maintaining a downstream data snapshot so that the downstream snapshot is consistent with the upstream snapshot. With this feature, TiCDC can better support the scenarios where reads and writes are separate, and help you lower the cost.

- TiCDC supports graceful upgrade #4757 @overvenus @3AceShowHand

  When TiCDC is deployed using TiUP (>=v1.11.0) or TiDB Operator (>=v1.3.8), you can gracefully upgrade the TiCDC cluster. During the upgrade, data replication latency is kept as low as 30 seconds. This improves stability, empowering TiCDC to better support latency-sensitive applications.

16.6.1.2 Compatibility changes

16.6.1.2.1 System variables

Variable name	Change type	Description
default_authentication_plugin ↪	Modified	Adds a new option tidb_sm3_password ↪ . When this variable is set to tidb_sm3_password ↪ , SM3 is used as the encryption algorithm.

Variable name	Change type	Description
sql_require_primary_key ↪	Newly added	Controls whether to enforce the requirement that a table has a primary key. After this variable is enabled, attempting to create or alter a table without a primary key will produce an er-

Variable name	Change type	Description
tidb_adaptive_closest_read_threshold	Newly added	Controls the threshold at which the TiDB server prefers to send read requests to the replica in the same region as the TiDB server when tidb_replica_read is set to closest-adaptive.

Variable name	Change type	Description
tidb_constraint_check_in_place_pessimistic ↪	Newly added	Controls when TiDB checks unique constraints in pessimistic transactions.

Variable name	Change type	Description
tidb_ddl_disk_quota	Newly added	Takes effect only when tidb_ddl_enable_fast_reorg is enabled. It sets the usage limit of local storage during backfilling when creating an index.

Variable name	Change type	Description
tidb_ddl_enable_fast_reorg	Newly added	Controls whether to enable the acceleration of `ADD INDEX` and `CREATE INDEX` DDL operations to improve the speed of backfilling when creating an index.

Variable name	Change type	Description
`tidb_ddl_flashback_concurrency`	Newly added	Controls the concurrency of `flashback cluster`. The feature controlled by this variable is not fully functional in TiDB v6.3.0. Do not change the default value.

Variable name	Change type	Description
tidb_enable_exchange_partition ↪	Deprecated in v7.4.0	Controls whether to enable the exchange ↪ ↪ partitions ↪ ↪ with ↪ ↪ tables ↪ feature. The default value is ON, that is, exchange ↪ ↪ partitions ↪ ↪ with ↪ ↪ tables ↪ is enabled by default.

Variable name	Change type	Description
tidb_enable_foreign_key	Newly added	Controls whether to enable the FOREIGN KEY feature. The feature controlled by this variable is not fully functional in TiDB v6.3.0. Do not change the default value.

Variable name	Change type	Description
tidb_enable_general_plan_cache	Newly added	Controls whether to enable the General Plan Cache feature. The feature controlled by this variable is not fully functional in TiDB v6.3.0. Do not change the default value.

Variable name	Change type	Description
tidb_enable_metadata_lock ↪	Newly added	Specifies whether to enable the Metadata lock feature.

Variable name	Change type	Description
tidb_enable_null_aware_anti_join	Newly added	Controls whether TiDB applies Null-Aware Hash Join when Anti Join is generated by subqueries led by special set operators `NOT IN` and `!= ALL`.

Variable name	Change type	Description
tidb_enable_pseudo_for_outdated_stats ↪	Modified	Controls the behavior of the optimizer on using statistics of a table when the statistics are outdated. The default value changes from `ON` to `OFF`, which means the optimizer still keeps using the statistics of the

Variable name	Change type	Description
tidb_enable_tmp_storage_on_oom ↪	Modified	Controls whether to enable the dynamic memory control feature for the operator that reads data. When this variable is set to ON, the memory usage might not be under the control of tidb_mem_quota_query ↪ .
4098		There-

Variable name	Change type	Description
tidb_enable_tiflash_read_for_write_stmt ↪	Newly added	Controls whether read requests in SQL write statements are pushed down to TiFlash. The feature controlled by this variable is not fully functional in TiDB v6.3.0. Do not change the default value.

Variable name	Change type	Description
tidb_enable_gen_col_substitute	Newly added	Controls whether to replace expressions with generated columns in an unsafe way.

Variable name	Change type	Description
tidb_general_plan_cache_size ↪	Newly added	Controls the maximum number of execution plans that can be cached by General Plan Cache. The feature controlled by this variable is not fully functional in TiDB v6.3.0. Do not change the default value.

Variable name	Change type	Description
tidb_last_plan_replayer_token	Newly added	Read-only and used to obtain the result of the last `PLAN REPLAYER DUMP` execution in the current session.

Variable name	Change type	Description
tidb_min_paging_size	Newly added	This variable is used to set the minimum number of rows during the coprocessor paging request process.

Variable name	Change type	Description
tidb_opt_force_inline_cte ↪	Newly added	Controls whether common table expressions (CTEs) in the entire session are inlined or not. The default value is `OFF`, which means that inlining CTE is not enforced by default.

Variable name	Change type	Description
tidb_opt_three_stage_distinct_agg	Newly added	Specifies whether to rewrite a `COUNT ( DISTINCT )` aggregation into a three-stage aggregation in MPP mode. The default value is `ON`.

Variable name	Change type	Description
tidb_partition_prune_mode ↪	Modified	Specifies whether to enable dynamic pruning. Since v6.3.0, the default value changes to `dynamic` ↪ .

Variable name	Change type	Description
tidb_rc_read_check_ts ↪	Modified	Used for optimizing the timestamp acquisition, which is suitable for scenarios with read-committed isolation level where read-write conflicts are rare. This feature is oriented to specific service workloads

Variable name	Change type	Description	
tidb_rc_write_check_ts ↪	Newly added	Used for optimizing the acquisition of timestamps and is suitable for scenarios with few pointwrite conflicts in RC isolation level of pessimistic transactions. Enabling this variable can avoid the	4108

Variable name	Change type	Description
tiflash_fastscan	Newly added	Controls whether to enable FastScan. If FastScan is enabled (set to ON), TiFlash provides more efficient query performance, but does not guarantee the accuracy of the query results or data consistency.

Variable name	Change type	Description

16.6.1.2.2 Configuration file parameters

Configuration file	Configuration	Change type	Description
TiDB	`temp-dir`	Newly added	Specifies the file system location used by TiDB to store temporary data. If a feature requires local storage in TiDB nodes, TiDB stores the corresponding temporary data in this location.

Configuration file	Configuration	Change type	Description
TiKV	`auto-adjust-pool-size`	Newly added	Controls whether to automatically adjust the thread pool size. When it is enabled, the read performance of TiKV is optimized by automatically adjusting the UnifyReadPool thread pool size based

Configuration file	Configuration	Change type	Description
TiKV	`data-encryption-method`	Modified	Introduces a new value option `sm4`, When this configuration item is set to `sm4`, data is encrypted using SM4 before being stored.

Configuration file	Configuration	Change type	Description
TiKV	`enable-log-recycle`	Newly added	Determines whether to recycle stale log files in Raft Engine. When it is enabled, logically purged log files will be reserved for recycling. This reduces the long tail latency on write workloads. This config-

Configuration file	Configuration	Change type	Description
TiKV	`format_version`	Newly added	Specifies the version of log files in Raft Engine. The default log file version is `1` for TiKV earlier than v6.3.0. The log files can be read by TiKV >= v6.1.0. The default log file version is `2` for TiKV v6.3.0 and

Configuration file	Configuration	Change type	Description
TiKV	`log-backup.enable`	Modification	Since v6.3.0, the default value changes from `false` to `true`.
TiKV	`log-backup.max-flush-interval`	Modification	Since v6.3.0, the default value changes from `5min` to `3min`.

Configuration file	Configuration	Change type	Description
PD	enable-diagnostic	Newly added	Controls whether to enable the diagnostic feature. The default value is `false` ↪ .

Configuration file	Configuration	Change type	Description
TiFlash	`dt_enable_read_thread`	Deprecated	Since v6.3.0, this configuration item is deprecated. The thread pool is used to handle read requests from the storage engine by default and cannot be disabled.

Configuration file	Configuration	Change type	Description
DM	`safe-mode-duration`	Newly added	Specifies the duration of the automatic safe mode.
TiCDC	`enable-sync-point`	Newly added	Specifies whether to enable the Sync-point feature.
TiCDC	`sync-point-interval`	Newly added	Specifies the interval at which Sync-point aligns the upstream and downstream snapshots.

Configuration file	Configuration	Change type	Description
TiCDC	`sync-point-retention`	Newly added	Specifies how long the data is retained by Sync-point in the down-stream table. When this du-ra-tion is ex-ceeded, the data is cleaned up.

Configuration file	Configuration	Change type	Description
TiCDC	`sink` ↪ `-` ↪ `uri` ↪ `.` ↪ `memory` ↪	Deprecated	The `memory` ↪ sorting is deprecated. It is not recommended to use it in any situation. You can use the `unified` ↪ sorting instead.

16.6.1.2.3 Others

- Log backup supports GCS and Azure Blob Storage as backup storage.
- Log backup is now compatible with the `exchange partition` DDL.
- The SQL statement `ALTER TABLE ...SET TiFLASH MODE ...` previously used for enabling fastscan is deprecated, and replaced by the system variable `tiflash_fastscan`. When you upgrade from v6.2.0 to v6.3.0, all FastScan settings in v6.2.0 will become

invalid, but will not affect the normal reading of data. In this case, you need to configure the variable `tiflash_fastscan` to enable or disable FastScan. When you upgrade from an earlier version to v6.3.0, the FastScan feature is not enabled by default for all sessions to keep data consistent.

- To deploy TiFlash under the Linux AMD64 architecture, the CPU must support the AVX2 instruction set. Ensure that `cat /proc/cpuinfo | grep avx2` has output. To deploy TiFlash under the Linux ARM64 architecture, the CPU must support the ARMv8 instruction set architecture. Ensure that `cat /proc/cpuinfo | grep 'crc32' | grep 'asimd'` has output. By using the instruction set extensions, TiFlash's vectorization engine can deliver better performance.
- The minimum version of HAProxy that works with TiDB is now v1.5. HAProxy versions between v1.5 and v2.1 now require the `post-41` configuration option to be set in `mysql-check`. It is recommended to use HAProxy v2.2 or newer.

16.6.1.3 Removed feature

Since v6.3.0, TiCDC no longer supports configuring Pulsar sink. kop provided by StreamNative can be used as an alternative.

16.6.1.4 Improvements

- TiDB
  - TiDB is now case-insensitive to the target table name when checking the table existence #34610 @tiancaiamao
  - Improve MySQL compatibility by adding a parsing check when setting the value of `init_connect` #35324 @CbcWestwolf
  - Improve the log warning generated for new connections #34964 @xiongjiwei
  - Optimize the HTTP API for querying DDL history jobs, and add support for the `start_job_id` parameter #35838 @tiancaiamao
  - Report errors when the JSON path has wrong syntax #22525 #34959 @xiongjiwei
  - Improve the performance of Join operations by fixing a false sharing issue #37641 @gengliqi
  - Support exporting the execution plan information of multiple SQL statements at a time using `PLAN REPLAYER`, which makes troubleshooting more efficient #37798 @Yisaer
- TiKV
  - Support configuring the `unreachable_backoff` item to avoid Raftstore broadcasting too many messages after one peer becomes unreachable #13054 @5kbpers
  - Improve the fault tolerance of TSO service #12794 @pingyu
  - Support dynamically modifying the number of sub-compaction operations performed concurrently in RocksDB (`rocksdb.max-sub-compactions`) #13145 @ethercflow

  - Optimize the performance of merging empty Regions #12421 @tabokie
  - Support more regular expression functions #13483 @gengliqi
  - Support automatically adjusting the thread pool size based on the CPU usage #13313 @glorv

- PD

  - Improve the query of the TiKV IO MBps metric in TiDB Dashboard #5366 @YiniXu9506
  - Modify the URL in TiDB Dashboard from `metrics` to `monitoring` #5366 @YiniXu9506

- TiFlash

  - Support pushing down the `elt` function to TiFlash #5104 @Willendless
  - Support pushing down the `leftShift` function to TiFlash #5099 @AnnieoftheStars
  - Support pushing down the `castTimeAsDuration` function to TiFlash #5306 @AntiTopQuark
  - Support pushing down the `HexIntArg/HexStrArg` function to TiFlash #5107 @YangKeao
  - Refactor TiFlash's interpreter, and support the new interpreter Planner #4739 @SeaRise
  - Improve the accuracy of memory tracker in TiFlash #5609 @bestwoody
  - Improve the performance of string columns with the `UTF8_BIN/ASCII_BIN/LATIN1_BIN/UTF8MB4_BIN` collations #5294 @solotzg
  - Calculate the I/O throughput in background in ReadLimiter #5401, #5091 @Lloyd-Pottiger

- Tools

  - Backup & Restore (BR)
    * PITR can merge small files generated in log backup, which greatly reduces the number of backup files #13232 @Leavrth
    * PITR supports automatically configuring the number of TiFlash replicas based on the upstream cluster configuration after the restoration #37208 @YuJuncen
  - TiCDC
    * Improve TiCDC's compatibility with the concurrent DDL framework introduced in the upstream TiDB #6506 @lance6716
    * Support logging `start ts` of DML statements when MySQL sink gets an error #6460 @overvenus
    * Enhance the `api/v1/health` API to return a more accurate health state of a TiCDC cluster #4757 @overvenus
    * Implement MQ sink and MySQL sink in the asynchronous mode to improve the sink throughput #5928 @hicqu @hi-rustin

    * Delete the deprecated pulsar sink #7087 @hi-rustin
    * Improve replication performance by discarding DDL statements that are irrelevant to a changefeed #6447 @asddongmen
  - TiDB Data Migration (DM)
    * Improve compatibility with MySQL 8.0 as data source #6448 @lance6716
    * Optimize DDL by executing DDL asynchronously when encounter "invalid connection" #4689 @lyzx2001
  - TiDB Lightning
    * Add query parameters for S3 external storage URL to support accessing the S3 data in another account by assuming a given role #36891 @dsdashun

16.6.1.5 Bug fixes

- TiDB
  - Fix the issue that the privilege check is skipped for `PREPARE` statements #35784 @lcwangchao
  - Fix the issue that the system variable `tidb_enable_noop_variable` can be set to `WARN` #36647 @lcwangchao
  - Fix the issue that when an expression index is defined, the `ORDINAL_POSITION` column of the `INFORMAITON_SCHEMA.COLUMNS` table might be incorrect #31200 @bb7133
  - Fix the issue that TiDB does not report an error when the timestamp is larger than `MAXINT32` #31585 @bb7133
  - Fix the issue that TiDB server cannot be started when the enterprise plugin is used #37319 @xhebox
  - Fix the incorrect output of `SHOW CREATE PLACEMENT POLICY` #37526 @xhebox
  - Fix the unexpected `EXCHANGE PARTITION` behaviors with temporary tables #37201 @lcwangchao
  - Fix the issue that querying `INFORMATION_SCHEMA.TIKV_REGION_STATUS` returns an incorrect result @zimulala
  - Fix the issue that the `EXPLAIN` query on views does not check privileges #34326 @hawkingrei
  - Fix the issue that JSON `null` cannot be updated to `NULL` #37852 @YangKeao
  - Fix the issue that `row_count` of DDL jobs is inaccurate #25968 @Defined2014
  - Fix the issue that `FLASHBACK TABLE` does not work properly #37386 @tiancaiamao
  - Fix the issue of failing to handle `prepared` statement flags in the typical MySQL protocol #36731 @dveeden
  - Fix the issue of incorrect TiDB status that might appear on startup in some extreme cases #36791 @xhebox
  - Fix the issue that `INFORMATION_SCHEMA.VARIABLES_INFO` does not comply with security enhanced mode (SEM) #37586 @CbcWestwolf

  - Fix the issue that casting string to string goes wrong in queries with `UNION` #31678 @cbcwestwolf
  - Fix the wrong result that occurs when enabling dynamic mode in partitioned tables for TiFlash #37254 @wshwsh12
  - Fix the issue that the cast and comparison between binary strings and JSON in TiDB are incompatible with MySQL #31918 #25053 @YangKeao
  - Fix the issue that `JSON_OBJECTAGG` and `JSON_ARRAYAGG` in TiDB are not compatible with MySQL on binary values #25053 @YangKeao
  - Fix the issue that the comparison between JSON opaque values causes panic #37315 @YangKeao
  - Fix the issue that the single precision float cannot be used in JSON aggregation funtions #37287 @YangKeao
  - Fix the issue that the `UNION` operator might return unexpected empty result #36903 @tiancaiamao
  - Fix the issue that the result of the `castRealAsTime` expression is inconsistent with MySQL #37462 @mengxin9014
  - Fix the issue that pessimistic DML operations lock non-unique index keys #36235 @ekexium
  - Fix the issue that `auto-commit` change affects transaction commit behaviours #36581 @cfzjywxk
  - Fix the issue that the `EXPLAIN ANALYZE` statement with DML executors might return result before the transaction commit finishes #37373 @cfzjywxk
  - Fix the issue that the UPDATE statements incorrectly eliminate the projection in some cases, which causes the `Can't find column` error #37568 @AilinKid
  - Fix the issue that the Join Reorder operation will mistakenly push down its Outer Join condition #37238 @AilinKid
  - Fix the issue that the `IN` and `NOT IN` subqueries in some patterns report the `Can't find column` error #37032 @AilinKid
  - Fix the issue that `Can't find column` is reported if an `UPDATE` statement contains common table expressions (CTE) #35758 @AilinKid
  - Fix incorrect `PromQL` #35856 @Defined2014

- TiKV

  - Fix the issue that PD does not reconnect to TiKV after the Region heartbeat is interrupted #12934 @bufferflies
  - Fix the issue that Regions might be overlapped if Raftstore is busy #13160 @5kbpers
  - Fix the issue that the PD client might cause deadlocks #13191 @bufferflies #12933 @BurtonQin
  - Fix the issue that TiKV might panic when encryption is disabled #13081 @jiayang-zheng
  - Fix the wrong expression of `Unified Read Pool CPU` in Dashboard #13086 @glorv

  - Fix the issue that the TiKV service is unavailable for several minutes when a TiKV instance is in an isolated network environment #12966 @cosven
  - Fix the issue that TiKV mistakenly reports a `PessimisticLockNotFound` error #13425 @sticnarf
  - Fix the issue that PITR might cause data loss in some situations #13281 @YuJuncen
  - Fix the issue that causes checkpoint not advanced when there are some long pessimistic transactions #13304 @YuJuncen
  - Fix the issue that TiKV does not distinguish the datetime type (`DATETIME`, `DATE`, `TIMESTAMP` and `TIME`) and `STRING` type in JSON #13417 @YangKeao
  - Fix incompatibility with MySQL of comparison between JSON bool and other JSON value #13386 #37481 @YangKeao

- PD

  - Fix PD panics caused by the issue that gRPC handles errors inappropriately when `enable-forwarding` is enabled #5373 @bufferflies
  - Fix the issue that unhealthy Region might cause PD panic #5491 @nolouch
  - Fix the issue that the TiFlash learner replica might not be created #5401 @HunDunDM

- TiFlash

  - Fix the issue that a window function might cause TiFlash to crash when the query is canceled #5814 @SeaRise
  - Fix the issue that wrong data input for `CAST(value AS DATETIME)` causing high TiFlash sys CPU #5097 @xzhangxian1008
  - Fix the issue that the result of `CAST(Real/Decimal AS time)` is inconsistent with MySQL #3779 @mengxin9014
  - Fix the issue that some obsolete data in storage cannot be deleted #5570 @JaySon-Huang
  - Fix the issue that page GC might block creating tables #5697 @JaySon-Huang
  - Fix the panic that occurs after creating the primary index with a column containing the `NULL` value #5859 @JaySon-Huang

- Tools

  - Backup & Restore (BR)

    * Fix the issue that might cause the information of the checkpoint being stale #36423 @YuJuncen
    * Fix the issue that the regions are not balanced because the concurrency is set too large during the restoration #37549 @3pointer
    * Fix the issue that might cause log backup checkpoint TS stuck when TiCDC exists in the cluster #37822 @YuJuncen

    * Fix the issue that might lead to backup and restoration failure if special characters exist in the authorization key of external storage #37469 [@MoCuishle28](https://github.com/MoCuishle28)

  - TiCDC
    * Fix the issue that TiCDC returns an inaccurate error for a wrong PD address with a grpc service #6458 @crelax
    * Fix the issue that the `cdc cause cli changefeed list` command does not return failed changefeeds #6334 @asddongmen
    * Fix the issue that TiCDC is unavailable when changefeed initialization fails #6859 @asddongmen
  - TiDB Binlog
    * Fix the issue that Drainer cannot send requests correctly to Pump when compressor is set to gzip #1152 @lichunzhu
  - TiDB Data Migration (DM)
    * Fix the issue that DM reports the `Specified key was too long` error #5315 @lance6716
    * Fix goroutine leak when relay meets an error #6193 @lance6716
    * Fix the issue that when `collation_compatible` is set to `"strict"`, DM might generate SQL with duplicated collations #6832 @lance6716
    * Reduce the appearance of the warning message "found error when get time-zone from binlog status_vars" in DM-worker log #6628 @lyzx2001
    * Fix the issue that latin1 data might be corrupted during replication #7028 @lance6716
  - TiDB Lightning
    * Fix the issue that TiDB Lightning does not support columns starting with slash, number, or non-ascii characters in Parquet files #36980 @D3Hunter

16.6.1.6 Contributors

We would like to thank the following contributors from the TiDB community:

- @An-DJ
- @AnnieoftheStars
- @AntiTopQuark
- @blacktear23

16.7 v6.2

16.7.1 TiDB 6.2.0 Release Notes

Release date: August 23, 2022

TiDB version: 6.2.0-DMR

> **Note:**
>
> The TiDB 6.2.0-DMR documentation has been archived. PingCAP encourages you to use the latest LTS version of the TiDB database.

In v6.2.0-DMR, the key new features and improvements are as follows:

- TiDB Dashboard supports visual execution plans, allowing more intuitive display of execution plans.
- Add a Monitoring page in TiDB Dashboard to make the performance analysis and tuning more efficient.
- The Lock View of TiDB feature supports showing the waiting information of optimistic transactions, facilitating quick locating of lock conflicts.
- TiFlash supports a newer version of storage format, enhancing stability and performance.
- The Fine Grained Shuffle feature allows parallel execution of window functions in multiple threads.
- A new concurrent DDL framework: Less DDL statements blocked and higher execution efficiency.
- TiKV supports automatically tuning the CPU usage, thus ensuring stable and efficient database operations.
- Point-in-time recovery (PITR) is introduced to restore a snapshot of a TiDB cluster to a new cluster from any given time point in the past.
- TiDB Lightning supports pausing the scheduling on the table level in the physical import mode, instead of on the cluster level.
- BR supports restoring user and privilege data, making backup and restore smoother.

- TiCDC unlocks more data replication scenarios by supporting filtering specific types of DDL events.
- The `SAVEPOINT` mechanism is supported, with which you can flexibly control the rollback points within a transaction.
- TiDB supports adding, dropping, and modifying multiple columns or indexes with only one `ALTER TABLE` statement.
- Cross-cluster RawKV replication is now supported.

16.7.1.1 New features

16.7.1.1.1 SQL

- The physical data compaction feature is GA

  The TiFlash backend automatically compacts physical data based on specific conditions to reduce the backlog of useless data and optimize the data storage structure.

  There is often a certain amount of useless data in TiFlash tables before data compaction is automatically triggered. This feature lets you choose the right timing and manually execute SQL statements to immediately compact the physical data in TiFlash, thus reducing storage space usage and improving query performance. This feature is experimental in TiDB v6.1, and now is in General Availability (GA) in TiDB v6.2.0.

  User document #4145 @breezewish

16.7.1.1.2 Observability

- Split TiDB Dashboard from PD

  TiDB Dashboard is moved from PD to the monitoring node. This reduces the impact of TiDB Dashboard on PD and makes PD more stable.

  @Hawkson-jee

- TiDB Dashboard adds a Monitoring page

  The new Monitoring page shows key indicators required for performance tuning, based on which you can analyze and tune performance with reference to Performance tuning by database time.

  Specifically, you can analyze user response time and database time from a global and top-down perspective, to confirm whether the bottleneck in user response time is caused by database issues. If the bottleneck is in the database, you can use the database time overview and SQL latency breakdowns to identify the bottleneck and tune performance.

  User document #1381 @YiniXu9506

- TiDB Dashboard supports visual execution plans

  TiDB Dashboard provides visual execution plans and basic diagnosis service through the SQL Statements and Monitoring pages. This feature offers a fresh new perspective for you to identify each step of a query plan. Therefore, you can learn all traces of query execution plans more intuitively.

  This feature is particularly useful when you are trying to learn the execution of complex and large queries. Meanwhile, for each query execution plan, TiDB Dashboard automatically analyzes the execution details, spots potential problems, and provides optimization suggestions to reduce the time required for executing specific query plans.

  User document #1224 @time-and-fate

- Lock View supports showing the waiting information of optimistic transactions

  Too many lock conflicts might cause serious performance problems, and detecting the lock conflicts is a necessary way to troubleshoot such problems. Before v6.2.0, TiDB supported viewing the lock conflict relationships using the `INFORMATION_SCHEMA.DATA_LOCK_WAITS` system view, but it does not show the waiting information of optimistic transactions. TiDB v6.2.0 extends the `DATA_LOCK_WAITS` view and lists the optimistic transactions blocked by pessimistic locks in the view. This feature helps users detect lock conflicts quickly, and provides a basis for improving the application, thus reducing the frequency of lock conflicts and improving the overall performance.

  User document #34609 @longfangsong

16.7.1.1.3 Performance

- Improve the `LEADING` optimizer hint to support outer join ordering

  In v6.1.0, the optimizer hint `LEADING` was introduced to modify the join order of tables. But this hint was not applicable to queries that contain outer joins. For more information, see `LEADING` document. In v6.2.0, TiDB lifts this restriction. In a query that contains outer join, now you can use this hint to specify the join order of tables to get better SQL execution performance and to avoid the sudden change of execution plans.

  User document #29932 @Reminiscent

- Add a new optimizer `SEMI_JOIN_REWRITE` to improve the performance of `EXISTS` queries

  In some scenarios, queries with `EXISTS` cannot have the optimal execution plan and might be executed for too long. In v6.2.0, the optimizer adds rewriting rules for such scenarios, and you can use `SEMI_JOIN_REWRITE` in queries to forcibly make the optimizer rewrite the query and get better query performance.

  User document #35323 @winoros

- Add a new optimizer hint `MERGE` to improve the performance of analytical queries

  Common table expression (CTE) is an effective way to simplify the query logic. It is widely used to write complex queries. Before v6.2.0, CTE cannot be automatically expanded in TiFlash environments, which, to some extent, limits the execution efficiency of MPP. In v6.2.0, a MySQL-compatible optimizer hint `MERGE` is introduced. With this hint, the optimizer now allows CTE inlines to be expanded, so that the consumers of the CTE query results can concurrently execute the query in TiFlash, which improves the performance of some analytical queries.

  User document #36122 @dayicklp

- Optimize the performance of aggregation operations in some analytical scenarios

  When you use TiFlash to perform aggregation operations on a column in an OLAP scenario, if serious data skew exists due to uneven distribution of the aggregated column, and if the aggregated column has many different values, the execution efficiency of `COUNT(DISTINCT)` queries on the column is low. In v6.2.0, new rewriting rules are introduced to improve the performance of `COUNT(DISTINCT)` queries on a single column.

  User document #36169 @fixdb

- TiDB supports concurrent DDL operations

  TiDB v6.2.0 introduces a new concurrent DDL framework, which enables DDL statements to be concurrently executed on different table objects and fixes the issue that DDL operations are blocked by DDL operations on other tables. In addition, TiDB supports concurrent DDL execution when adding an index on multiple tables or changing a column type. This improves the efficiency of DDL execution.

  User document #32031 @wjhuang2016

- Optimizer enhances the estimation of string matching

  In the string matching scenario, if the optimizer cannot accurately estimate the number of rows, it affects the generation of the optimal execution plan. For example, the condition is `like '%xyz'` or using a regular expression `regex ()`. To improve the estimation accuracy in such scenarios, TiDB v6.2.0 enhances the estimation method. The new method combines the TopN information of statistics and system variables to improve the accuracy and makes it possible to modify the match selectivity manually, thus improving the SQL performance.

  User document #36209 @time-and-fate

- Window functions pushed down to TiFlash can be executed in multiple threads

  After the Fine Grained Shuffle feature is enabled, window functions can be executed in multiple threads, instead of in a single thread. This feature reduces the query response time significantly without changing user behavior. You can control the granularity of the shuffle by adjusting the value of the variables.

  User document #4631 @guo-shaoge

- TiFlash supports a newer version of storage format

  The new storage format relieves high CPU usage caused by GC in high-concurrency and heavy workload scenarios. This significantly reduces IO traffic of background tasks, thereby boosting stability under high concurrencies and heavy workloads. At the same time, space amplification and disk waste can be significantly reduced.

  In TiDB v6.2.0, data is stored in the new storage format by default. Note that if TiFlash is upgraded from earlier versions to v6.2.0, you cannot perform in-place downgrade on TiFlash, because earlier TiFlash versions cannot recognize the new storage format.

  For more information about upgrading TiFlash, see TiFlash v6.2.0 Upgrade Guide.

  User document #3594 @JaySon-Huang @lidezhu @jiaqizho

- TiFlash optimizes data scanning performance in multiple concurrency scenarios (experimental)

  TiFlash reduces duplicate reads of the same data by merging read operations of the same data, and optimizes the resource overhead in the case of multiple concurrent tasks to improve data scanning performance. It avoids the situation where the same data has to be read separately in each task, or even the same data may be read multiple times at the same time, if the same data is involved in multiple concurrent tasks.

  User document #5376 @JinheLin

- TiFlash adds FastScan for data scanning to increase read and write speed by sacrificing data consistency (experimental)

  TiDB introduces FastScan in v6.2.0. It supports skipping consistency checks to increase the speed significantly. FastScan is suitable for scenarios that do not require high accuracy and consistency of data such as offline analysis tasks. Previously, to ensure data consistency, TiFlash needed to perform data consistency checks during the data scanning process to find the required data from multiple different versions.

  When you upgrade from an earlier version to TiDB v6.2.0, FastScan is not enabled by default for all tables, which ensures data consistency. You can enable FastScan for each table independently. If the table is set to FastScan in TiDB v6.2.0, it will be disabled when you downgrade to a lower version, but this does not affect the normal data read. In this case, it is equivalent to strong consistency read.

  User document #5252 @hongyunyan

16.7.1.1.4 Stability

- TiKV supports automatically tuning the CPU usage (experimental)

  Databases usually have background processes to perform internal operations. Statistical information can be collected to help identify performance problems, generate better execution plans, and improve the stability and performance of the database. However,

how to more efficiently collect information, and how to balance the resource overhead of background operations and foreground operations without affecting the daily use have always been one of the headaches in the database industry.

Starting from v6.2.0, TiDB supports setting the CPU usage rate of background requests using the TiKV configuration file, thereby limiting the CPU usage ratio of background operations such as automatically collecting statistics in TiKV, and avoiding the resource preemption of user operations by background operations in extreme cases. This ensures that the operations of the database are stable and efficient.

At the same time, TiDB also supports automatically adjusting CPU usage. Then, TiKV will adaptively adjust the CPU resources occupied by background requests according to the CPU usage of the instance. This feature is disabled by default.

User document #12503 @BornChanger

16.7.1.1.5 Ease of use

- TiKV supports listing detailed configuration information using command-line flags

  The TiKV configuration file can be used to manage TiKV instances. However, for instances that run for a long time and are managed by different users, it is difficult to know which configuration item has been modified and what the default value is. This might cause confusion when you upgrade the cluster or migrate data. Since TiDB v6.2.0, tikv-server supports a new command-line flag `--config-info` that lists default and current values of all TiKV configuration items, helps users to quickly verify the startup parameters of the TiKV process, and improves usability.

  User document #12492 @glorv

16.7.1.1.6 MySQL compatibility

- TiDB supports modifying multiple columns or indexes in a single `ALTER TABLE` statement

  Before v6.2.0, TiDB only supports single DDL changes, which leads to incompatible DDL operations when migrating heterogeneous databases, and it takes extra effort to modify a complex DDL statement into multiple TiDB-supported simple DDL statements. In addition, some users rely on the ORM framework to create assembly in SQL, thus causing SQL incompatibility. Since v6.2.0, TiDB supports modifying multiple schema objects in a single SQL statement, which is convenient for users to implement SQL and improves usability.

  User document #14766 @tangenta

- Support setting savepoints in transactions

  A transaction is a logical collection of a series of consecutive operations with which the database guarantees ACID properties. In some complex application scenarios, you

might need to manage many operations in a transaction, and sometimes you might need to roll back some operations in the transaction. "Savepoint" is a nameable mechanism for the internal implementation of transactions. With this mechanism, you can flexibly control the rollback points within a transaction, thereby managing the more complex transactions and having more freedom in designing diverse applications.

User document #6840 @crazycs520

16.7.1.1.7 Data migration

- BR supports restoring user and privilege data

  BR supports restoring user and privilege data when it performs a normal restoration. You do not need any additional restoration plan to restore user and privilege data. To enable this feature, specify the `--with-sys-table` parameter when you use BR to restore data.

  User document #35395 @D3Hunter

- Support point-in-time recovery (PITR) based on backup and restoration of log and snapshot

  PITR is implemented based on the backup and restoration of log and snapshot. It allows you to restore the snapshots of a cluster at any point in history to a new cluster. This feature satisfies the following needs:

  - Reduce the RPO in disaster recovery to less than 20 minutes.
  - Handle the cases of incorrect writes from applications by, for example, rolling back data to before the error event.
  - Perform history data auditing to meet the requirements of laws and regulations.

  This feature has usage limitations. For details, refer to the user document.

  User document #29501 @joccau

- DM supports continuous data validation (experimental)

  Continuous data validation is used to continuously compare the upstream binlog with the data written into the downstream during data migration. The validator identifies data exceptions, such as inconsistent data and missing records.

  This feature solves the issues of lagging validation and excessive resource consumption in common full data validation schemes.

  User document #4426 @D3Hunter @buchuitoudegou

- Automatically identify the region of Amazon S3 buckets

  Data migration tasks can automatically identify the region of Amazon S3 buckets. You do not need to explicitly pass the region parameter.

  #34275 @WangLe1321

- Support configuring disk quota for TiDB Lightning (experimental)

  When TiDB Lightning imports data in the physical import mode (backend='local'), sorted-kv-dir must have enough space to store the source data. Insufficient disk space might cause the import task to fail. Now you can use the new `disk_quota` configuration to limit the total amount of disk space used by TiDB Lightning, so that the import task can be completed normally even when sorted-kv-dir does not have enough storage space.

  User document #446 @buchuitoudegou

- TiDB Lightning supports importing data to production clusters in the physical import mode

  Previously, the physical import mode of TiDB Lightning (backend='local') had a significant impact on the target cluster. For example, during the migration, PD global scheduling is paused. Therefore, the previous physical import mode is only suitable for initial data import.

  TiDB Lightning improves the existing physical import mode. By allowing pausing the scheduling of tables, the impact of import is reduced from cluster level to table level. That is, you can read and write tables that are not being imported.

  This feature does not need manual configuration. If your TiDB cluster is v6.1.0 or later versions and TiDB Lightning is v6.2.0 or later versions, the new physical import mode takes effect automatically.

  User document #35148 @gozssky

- Refactor the user documentation of TiDB Lightning to make its structure more reasonable and clear. The terms for "backend" is also modified to lower the understanding barrier for new users:

  - Replace "local backend" with "physical import mode".
  - Replace "tidb backend" with "logical import mode".

16.7.1.1.8 TiDB data share subscription

- Support cross-cluster RawKV replication (experimental)

  Support subscribing to the data change of RawKV and replicating the data change to a downstream TiKV cluster in real-time using a new component TiKV-CDC, which makes the cross-cluster replication possible.

  User document #11965 @pingyu

- Support filtering DDL and DML events

  In some special occasions, you might want to set filter rules for incremental data change logs. For example, filtering high risk DDL events such as DROP TABLE. Starting from v6.2.0, TiCDC supports filtering DDL events of specified types and

filtering DML events based on SQL expressions. This makes TiCDC applicable to more data replication scenarios.

User document #6160 @asddongmen

16.7.1.2 Compatibility changes

16.7.1.2.1 System variables

Variable name	Change type	Description
tidb_enable_new_cost_interface	Newly added	This variable controls whether to enable the refactored Cost Model implementation.

Variable name	Change type	Description
tidb_cost_model_version	Newly added	TiDB uses a cost model to choose an index and operator during physical optimization. This variable is used to select the cost model version. TiDB v6.2.0 introduces the Cost Model Version 2, which is

Variable name	Change type	Description
tidb_enable_concurrent_ddl	Newly added	This variable controls whether to allow TiDB to use concurrent DDL statements. DO NOT modify this variable. The risk of disabling this variable is unknown and might corrupt the metadata of the cluster.

Variable name	Change type	Description
tiflash_fine_grained_shuffle_stream_count	Newly added	This variable controls the concurrency level of the window function execution When the window function is pushed down to TiFlash for execution.

Variable name	Change type	Description
tiflash_fine_grained_shuffle_batch_size	Newly added	When Fine Grained Shuffle is enabled, the window function pushed down to TiFlash can be executed in parallel. This variable controls the batch size of the data sent by the sender. The sender will send data once the
4141		

Variable name	Change type	Description
tidb_default_string_match_selectivity	Newly added	This variable is used to set the default selectivity of `like` ↪ , `rlike` ↪ , and `regexp` ↪ functions in the filter condition when estimating the number of rows. This variable also controls whether
4142		

Variable name	Change type	Description
tidb_enable_historical_stats_for_analyze_snapshot	Newly added	This variable controls whether to read historical data or the latest data when performing `ANALYZE` ↪ .

Variable name	Change type	Description
tidb_generate_binary_plan	Newly added	This variable controls whether to generate binary-encoded execution plans in slow logs and statement summaries.

Variable name	Change type	Description
tidb_opt_enable_distinct_agg	Newly added	This variable sets whether the optimizer rewrites the aggregate functions with `DISTINCT` to the two-level aggregate functions, such as rewriting `SELECT b, COUNT(DISTINCT a) FROM t GROUP`

Variable name	Change type	Description
tidb_enable_noop_variables	Newly added	This variable controls whether to show `noop` variables in the result of `SHOW [GLOBAL] VARIABLES`.

Variable name	Change type	Description
tidb_max_paging_size	Newly added	This variable is used to set the maximum number of rows during the coprocessor paging request process.

Variable name	Change type	Description
tidb_tx_commit_batch_size	Newly added	This variable is used to control the batch size of transaction commit requests that TiDB sends to TiKV.

Variable name	Change type	Description
tidb_enable_change_multi_schema	Dynamic	This variable is used to control whether multiple columns or indexes can be altered in one `ALTER TABLE` statement.

Variable name	Change type	Description
tidb_enable_outer_join_reorder	Modified	This variable controls whether the Join Reorder algorithm of TiDB supports Outer Join. In v6.1.0, the default value is `ON`, which means the Join Reorder's support for Outer Join is enabled by default. From v6.2.0, the de-

Variable name	Change type	Description

16.7.1.2.2 Configuration file parameters

Configuration file	Configuration	Change type	Description
TiDB	feedback-probability	Deleted	This configuration is no longer effective and is not recommended.
TiDB	query-feedback-limit	Deleted	This configuration is no longer effective and is not recommended.

Configuration file	Configuration	Change type	Description
TiKV	server.simplify-metrics	Newly added	This configuration specifies whether to simplify the returned monitoring metrics.

Configuration file	Configuration	Change type	Description
TiKV	quota.background-cpu-time	Newly added	This configuration specifies the soft limit on the CPU resources used by TiKV background to process read and write requests.

Configuration file	Configuration	Change type	Description
TiKV	quota.write-bandwidth	Newly added	This configuration specifies the soft limit on the bandwidth with which background transactions write data (not effective currently).

Configuration file	Configuration	Change type	Description
TiKV	quota.read-bandwidth	Newly added	This configuration specifies the soft limit on the bandwidth with which background transactions and the Coprocessor read data (not effective currently).

Configuration file	Configuration	Change type	Description
TiKV	quota.enable-auto-tune	Newly added	This configuration specifies whether to enable the auto-tuning of quota. If this configuration item is enabled, TiKV dynamically adjusts the quota for the background requests based on the

Configuration file	Configuration	Change type	Description
TiKV	rocksdb.enable-pipelined-commit	Deleted	This configuration is no longer effective.
TiKV	gc-merge-rewrite	Deleted	This configuration is no longer effective.
TiKV	log-backup.enable	Newly added	This configuration controls whether to enable log backup on TiKV.

Configuration file	Configuration	Change type	Description
TiKV	log-backup.file-size-limit	Newly added	This configuration specifies the size limit on log backup data. Once this limit is reached, data is automatically flushed to external storage.

Configuration file	Configuration	Change type	Description
TiKV	log-backup.initial-scan-pending-memory-quota	Newly added	This configuration specifies the quota of cache used for storing incremental scan data.

Configuration file	Configuration	Change type	Description
TiKV	log-backup.flush-interval	Newly added	This configuration specifies the maximum interval for writing backup data to external storage in log backup.

Configuration file	Configuration	Change type	Description
TiKV	log-backup.initial-scan-rate-limit	Newly added	This configuration specifies the rate limit on throughput in an incremental data scan in log backup.

Configuration file	Configuration	Change type	Description
TiKV	log-backup.threads	Newly added	This configuration specifies the number of threads used in log backup.

Configuration file	Configuration	Change type	Description
TiKV	log-backup.temp-path	Newly added	This configuration specifies temporary path to which log files are written before being flushed to external storage.

Configuration file	Configuration	Change type	Description
PD	replication.dr-auto-sync.wait-async-timeout	Deleted	This configuration does not take effect and is deleted.
PD	replication.dr-auto-sync.wait-sync-timeout	Deleted	This configuration does not take effect and is deleted.

Configuration file	Configuration	Change type	Description
TiFlash	`storage.format_version`	Modified	The default value of `format_version` changes to `4`, the default format for v6.2.0 and later versions, which reduces write amplification and background task resource consumption.

Configuration file	Configuration	Change type	Description
TiFlash	profiles.default.dt_enable_read_thread	Newly added	This configuration controls whether to use the thread pool to handle read requests from the storage engine. The default value is `false` ↩ .

Configuration file	Configuration	Change type	Description
TiFlash	profiles.default.dwrite_page_gc_threshold	Newly added	This configuration specifies the minimum ratio of valid data in a PageStorage data file.

Configuration file	Configuration	Change type	Description
TiCDC	overwrite-checkpoint-ts	Newly added	This configuration is added to the `cdc cli changefeed resume` sub-command.
TiCDC	no-confirm	Newly added	This configuration is added to the `cdc cli changefeed resume` sub-command.

Configuration file	Configuration	Change type	Description
DM	mode	Newly added	This configuration is a validator parameter. Optional values are `full` ↪ , `fast` ↪ , and `none` ↪ . The default value is `none` ↪ , which does not validate the data.

Configuration file	Configuration	Change type	Description
DM	worker-count	Newly added	This configuration is a validator parameter and specifies the number of validation workers in the background. The default value is 4.

Configuration file	Configuration	Change type	Description
DM	row-error-delay	Newly added	This configuration is a validator parameter. If a row is not validated within the specified time, it will be marked as an error row. The default value is 30m, which means 30 minutes.

Configuration file	Configuration	Change type	Description
TiDB Lightning	tikv-importer.write-bwlimit	Newly added configuration	This configuration determines the write bandwidth when TiDB Lightning writes data to each TiKV Store. The default value is `0`, indicating the bandwidth is not limited.

Configuration file	Configuration	Change type	Description
TiDB Lightning	tikv-importer.disk-quota	Newly added	This configuration limits the storage space used by TiDB Lightning.

16.7.1.2.3 Others

- TiFlash `format_version` cannot be downgraded from `4` to `3`. For details, see TiFlash v6.2.0 Upgrade Guide.
- In v6.2.0 and later versions, it is strongly recommended to keep the default value `false` of `dt_enable_logical_split` and not to change it to `true`. For details, see known issue #5576.
- If the backup cluster has a TiFlash replica, after you perform PITR, the restoration cluster does not contain the data in the TiFlash replica. To restore data from the TiFlash replica, you need to manually configure TiFlash replicas. Executing the `exchange partition` DDL statement might result in a failure of PITR. If the upstream database uses TiDB Lightning's physical import mode to import data, the data cannot be backed up in log backup. It is recommended to perform a full backup after the data import. For other compatibility issues of PITR, see PITR limitations.
- Since TiDB v6.2.0, you can restore table in `mysql` schema by specifying the parameter `--with-sys-table=true` when restoring data.
- When you execute the `ALTER TABLE` statement to add, drop, or modify multiple columns or indexes, TiDB checks table consistency by comparing the table before and after statement execution, regardless of the change in the same DDL statement. The execution order of the DDLs is not fully compatible with MySQL in some scenarios.
- If the TiDB component is v6.2.0 or later, the TiKV component should not be earlier than v6.2.0.
- TiKV adds a configuration item `split.region-cpu-overload-threshold-ratio` that supports dynamic configuration.

- Slow query logs, `information_schema.statements_summary`, and `information_schema` ↪ `.slow_query`can export `binary_plan`, or execution plans encoded in the binary format.
- Two columns are added to the `SHOW TABLE ... REGIONS` statement: `SCHEDULING_CONSTRAINTS` ↪ and `SCHEDULING_STATE`, which respectively indicate Region scheduling constraints in Placement in SQL and the current scheduling state.
- Since TiDB v6.2.0, you can capture data changes of RawKV via TiKV-CDC.
- When `ROLLBACK TO SAVEPOINT` is used to roll back a transaction to a specified savepoint, MySQL releases the locks held only after the specified savepoint, while in TiDB pessimistic transaction, TiDB does not immediately release the locks held after the specified savepoint. Instead, TiDB releases all locks when the transaction is committed or rolled back.
- Since TiDB v6.2.0, the `SELECT tidb_version()` statement also returns Store type (tikv or unistore).
- TiDB no longer has hidden system variables.
- TiDB v6.2.0 introduces two new system tables:
  - `INFORMATION_SCHEMA.VARIABLES_INFO`: used for viewing information about TiDB system variables.
  - `PERFORMANCE_SCHEMA.SESSION_VARIABLES`: used for viewing information about TiDB session-level system variables.

16.7.1.3 Improvements

- TiDB
  - Support the `SHOW COUNT(*)WARNINGS` and `SHOW COUNT(*)ERRORS` statements #25068 @likzn
  - Add validation check for some system variables #35048 @morgo
  - Optimize the error messages for some type conversions #32447 @fanrenhoo
  - The `KILL` command now supports DDL operations #24144 @morgo
  - Make the output of `SHOW TABLES/DATABASES LIKE ···` more MySQL-compatible. The column names in the output contain the `LIKE` value #35116 @likzn
  - Improve the performance of JSON-related functions #35859 @wjhuang2016
  - Improve the verification speed of password login using SHA-2 #35998 @virusdefender
  - Simplify some log outputs #36011 @dveeden
  - Optimize the Coprocessor communication protocol. This can greatly reduce the memory consumption of the TiDB processes when reading data, and further alleviate the OOM issue in the scenario of scanning tables and exporting data by Dumpling. The system variable `tidb_enable_paging` is introduced to control whether to enable this communication protocol (with the scope of SESSION or GLOBAL). This protocol is disabled by default. To enable it, set the variable value to `true` #35633 @tiancaiama @wshwsh12

  - Optimize the accuracy of memory tracking for some operators (HashJoin, HashAgg, Update, Delete) (#35634, #35631, #35635 @wshwsh12) (#34096 @ekexium)
  - The system table `INFORMATION_SCHEMA.DATA_LOCK_WAIT` supports recording the locking information of optimistic transactions #34609 @longfangson
  - Add some monitoring metrics for transactions #34456 @longfangsong

- TiKV

  - Support compressing the metrics response using gzip to reduce the HTTP body size #12355 @glorv
  - Improve the readability of the TiKV panel in Grafana Dashboard #12007 @kevin-xianliu
  - Optimize the commit pipeline performance of the Apply operator #12898 @ethercflow
  - Support dynamically modifying the number of sub-compaction operations performed concurrently in RocksDB (`rocksdb.max-sub-compactions`) #13145 @ethercflow

- PD

  - Support the statistical dimension of CPU usage of a Region and enhance the usage scenarios of Load Base Split #12063 @Jmpotato

- TiFlash

  - Refine error handling of the TiFlash MPP engine, thereby enhancing stability #5095 @windtalker @yibin87
  - Optimize the comparison and sorting of UTF8_BIN and UTF8MB4_BIN collations #5294 @solotzg

- Tools

  - Backup & Restore (BR)
    * Adjust the backup data directory structure to fix backup failure caused by S3 rate limiting in large cluster backup #30087 @MoCuishle28
  - TiCDC
    * Reduce performance overhead caused by runtime context switching in multi-Region scenarios #5610 @hicqu
    * Optimize redo log performance, and fix meta and data inconsistency problems (#6011 @CharlesCheung96) (#5924 @zhaoxinyu) (#6277 @hicqu)
  - TiDB Lightning

    * Add more retryable errors, including EOF, Read index not ready, and Coprocessor timeout #36674, #36566 @D3Hunter

  – TiUP

    * When a new cluster is deployed using TiUP, node-exporter will use the 1.3.1 version, and blackbox-exporter will use the 0.21.1 version, which ensures successful deployment in different systems and environments

16.7.1.4 Bug fixes

- TiDB

  – Fix the issue that a partition is incorrectly pruned if a partition key is used in the query condition and the collate is different from the one in the query partition table #32749 @mjonss
  – Fix the issue that `SET ROLE` cannot match the granted role if there are capital letters in the host #33061 @morgo
  – Fix the issue that columns with `auto_increment` cannot be dropped #34891 @Defined2014
  – Fix the issue that `SHOW CONFIG` shows some configuration items that have been removed #34867 @morgo
  – Fix the issue that `SHOW DATABASES LIKE ···` is case-sensitive #34766 @e1ijah1
  – Fix the issue that `SHOW TABLE STATUS LIKE ...` is case-sensitive #7518 @likzn
  – Fix the issue that `max-index-length` still reports an error in non-strict mode #34931 @e1ijah1
  – Fix the issue that `ALTER COLUMN ... DROP DEFAULT` does not work #35018 @Defined2014
  – Fix the issue that when you create a table, the default value and the type of a column are not consistent and are not automatically corrected #34881 @Lloyd-Pottiger
  – Fix the issue that data in the `mysql.columns_priv` table is not deleted synchronously after you run `DROP USER` #35059 @lcwangchao
  – Fix the issue of DDL jam by disallowing creating tables within the schemas of some systems #35205 @tangenta
  – Fix the issue that querying partitioned tables might report "index-out-of-range" and "non used index" errors in some cases #35181 @mjonss
  – Fix the issue that `INTERVAL expr unit + expr` might report an error #30253 @mjonss
  – Fix a bug that a temporary table cannot be found after being created in a transaction #35644 @djshow832
  – Fix the panic issue that occurs when setting collation to the `ENUM` column #31637 @wjhuang2016
  – Fix the issue that when one PD node goes down, the query of `information_schema` ↪ `.TIKV_REGION_STATUS` fails due to not retrying other PD nodes #35708 @tangenta

  - Fix the issue that `SHOW CREATE TABLE ⋯` cannot correctly display set or `ENUM` columns after `SET character_set_results = GBK` #31338 @tangenta
  - Fix the incorrect scope of the system variables `tidb_log_file_max_days` and `tidb_config` #35190 @morgo
  - Fix the issue that the output of `SHOW CREATE TABLE` is not compatible with MySQL for the `ENUM` or `SET` column #36317 @Defined2014
  - Fix the issue that when creating a table, the behavior of a `LONG BYTE` column is not compatible with MySQL #36239 @Defined2014
  - Fix the issue that `auto_increment = x` does not take effect on temporary tables #36224 @djshow832
  - Fix the wrong default value when modifying columns concurrently #35846 @wjhuang2016
  - Avoid sending requests to unhealthy TiKV nodes to improve availability #34906 @sticnarf
  - Fix the issue that the column list does not work in the LOAD DATA statement #35198 @SpadeA-Tang
  - Fix the issue that in some scenarios the pessimistic lock is incorrectly added to the non-unique secondary index #36235 @ekexium

- TiKV

  - Avoid reporting `WriteConflict` errors in pessimistic transactions #11612 @sticnarf
  - Fix the possible duplicate commit records in pessimistic transactions when async commit is enabled #12615 @sticnarf
  - Fix the issue that TiKV panics when modifying the `storage.api-version` from `1` to `2` #12600 @pingyu
  - Fix the issue of inconsistent Region size configuration between TiKV and PD #12518 @5kbpers
  - Fix the issue that TiKV keeps reconnecting PD clients #12506, #12827 @Connor1996
  - Fix the issue that TiKV panics when performing type conversion for an empty string #12673 @wshwsh12
  - Fix the issue of time parsing error that occurs when the `DATETIME` values contain a fraction and `Z` #12739 @gengliqi
  - Fix the issue that the perf context written by the Apply operator to TiKV RocksDB is coarse-grained #11044 @LykxSassinator
  - Fix the issue that TiKV fails to start when the configuration of backup/import/cdc is invalid #12771 @3pointer
  - Fix the panic issue that might occur when a peer is being split and destroyed at the same time #12825 @BusyJay
  - Fix the panic issue that might occur when the source peer catches up logs by snapshot in the Region merge process #12663 @BusyJay
  - Fix the panic issue caused by analyzing statistics when `max_sample_size` is set to `0` #11192 @LykxSassinator

  - Fix the issue that encryption keys are not cleaned up when Raft Engine is enabled #12890 @tabokie
  - Fix the issue that the `get_valid_int_prefix` function is incompatible with TiDB. For example, the `FLOAT` type was incorrectly converted to `INT` #13045 @guo-shaoge
  - Fix the issue that the Commit Log Duration of a new Region is too high, which causes QPS to drop #13077 @Connor1996
  - Fix the issue that PD does not reconnect to TiKV after the Region heartbeat is interrupted #12934 @bufferflies

- Tools

  - Backup & Restore (BR)

    * Fix the issue that BR does not reset the rate limit after finishing a rate-limited backup task #31722 @MoCuishle28

16.7.1.5 Contributors

We would like to thank the following contributors from the TiDB community:

16.8 v6.1

16.8.1 TiDB 6.1.5 Release Notes

Release date: February 28, 2023

TiDB version: 6.1.5

Quick access: Quick start | Production deployment | Installation packages

16.8.1.1 Compatibility changes

- Starting from February 20, 2023, the telemetry feature is disabled by default in new versions of TiDB and TiDB Dashboard, including v6.1.5, and usage information is not collected and shared with PingCAP. Before upgrading to these versions, if the cluster uses the default telemetry configuration, the telemetry feature is disabled after the upgrade. See TiDB Release Timeline for a specific version.
  - The default value of the `tidb_enable_telemetry` system variable is changed from `ON` to `OFF`.
  - The default value of the TiDB `enable-telemetry` configuration item is changed from `true` to `false`.
  - The default value of the PD `enable-telemetry` configuration item is changed from `true` to `false`.
- Starting from v1.11.3, the telemetry feature is disabled by default in newly deployed TiUP, and usage information is not collected. If you upgrade from a TiUP version earlier than v1.11.3 to v1.11.3 or a later version, the telemetry feature keeps the same status as before the upgrade.

16.8.1.2 Improvements

- TiDB
  - Support the `AUTO_RANDOM` column as the first column of the clustered composite index #38572 @tangenta

16.8.1.3 Bug fixes

- TiDB
  - Fix the issue that data race might cause TiDB to restart #27725 @XuHuaiyu
  - Fix the issue that the `UPDATE` statement might not read the latest data when the Read Committed isolation level is used #41581 @cfzjywxk
- PD
  - Fix the PD OOM issue that occurs when the calls of `ReportMinResolvedTS` are too frequent #5965 @HundunDM
- Tools

- TiCDC
  - * Fix the issue that applying redo log might cause OOM when the replication lag is excessively high #8085 @CharlesCheung96
  - * Fix the issue that the performance degrades when redo log is enabled to write meta #8074 @CharlesCheung96
- TiDB Data Migration (DM)
  - * Fix the issue that the `binlog-schema delete` command fails to execute #7373 @liumengya94
  - * Fix the issue that the checkpoint does not advance when the last binlog is a skipped DDL #8175 @D3Hunter

16.8.2 TiDB 6.1.4 Release Notes

Release date: February 8, 2023

TiDB version: 6.1.4

Quick access: Quick start | Production deployment | Installation packages

16.8.2.1 Compatibility changes

- TiDB
  - No longer support modifying column types on partitioned tables because of potential correctness issues #40620 @mjonss

16.8.2.2 Improvements

- TiFlash
  - Reduce the IOPS by up to 95% and the write amplification by up to 65% for TiFlash instances under high update throughput workloads #6460 @flowbehappy
- Tools
  - TiCDC
    - * Add the DML batch operation mode to improve the throughput when SQL statements are generated in batches #7653 @asddongmen
    - * Support storing redo logs to GCS- or Azure-compatible object storage #7987 @CharlesCheung96
  - TiDB Lightning
    - * Change the severity of the precheck items `clusterResourceCheckItem` and `emptyRegionCheckItem` from `Critical` to `Warning` #37654 @niubell

16.8.2.3 Bug fixes

- TiDB
  - Fix the issue that when you create a table, the default value and the type of a column are not consistent and are not automatically corrected #34881 @Lloyd-Pottiger @mjonss
  - Fix the data race issue in the `LazyTxn.LockKeys` function #40355 @HuSharp
  - Fix the issue that the `INSERT` or `REPLACE` statements might panic in long session connections #40351 @fanrenhoo
  - Fix the issue that reading data using the "cursor read" method might return an error because of GC #39447 @zyguan
  - Fix the issue that the `pessimistic-auto-commit` configuration item does not take effect for point-get queries #39928 @zyguan
  - Fix the issue that querying the `INFORMATION_SCHEMA.TIKV_REGION_STATUS` table returns an incorrect result #37436 @zimulala
  - Fix the issue that the `IN` and `NOT IN` subqueries in some patterns report the `Can't find column` error #37032 @AilinKid @lance6716
- PD
  - Fix the issue that PD might unexpectedly add multiple Learners to a Region #5786 @HunDunDM
- TiKV
  - Fix the issue that TiDB fails to start on Gitpod when there are multiple `cgroup` and `mountinfo` records #13660 @tabokie
  - Fix the issue that tikv-ctl is terminated unexpectedly when executing the `reset -to-version` command #13829 @tabokie
  - Fix the issue that TiKV mistakenly reports a `PessimisticLockNotFound` error #13425 @sticnarf
  - Fix the issue that TiKV might panic when the size of one single write exceeds 2 GiB #13848 @YuJuncen
  - Fix the data inconsistency issue caused by network failure between TiDB and TiKV during the execution of a DML after a failed pessimistic DML #14038 @MyonKeminta
  - Fix the issue that `_` in the `LIKE` operator cannot match non-ASCII characters when new collation is not enabled #13769 @YangKeao @tonyxuqqi
- TiFlash
  - Fix the issue that TiFlash global locks are blocked for a long time occasionally #6418 @SeaRise
  - Fix the issue that high throughput writes cause OOM #6407 @JaySon-Huang

- Tools
  - Backup & Restore (BR)
    * Fix the issue that restore is interrupted due to failure in getting the Region size #36053 @YuJuncen
    * Fix the issue that causes panic when BR debugs the `backupmeta` file #40878 @MoCuishle28
  - TiCDC
    * Fix the issue that the checkpoint cannot advance when TiCDC replicates an excessively large number of tables #8004 @asddongmen
    * Fix the issue that `transaction_atomicity` and `protocol` cannot be updated via the configuration file #7935 @CharlesCheung96
    * Fix the issue that TiCDC mistakenly reports an error when the version of TiFlash is later than that of TiCDC #7744 @overvenus
    * Fix the issue that OOM occurs when TiCDC replicates large transactions #7913 @overvenus
    * Fix a bug that the context deadline is exceeded when TiCDC replicates data without splitting large transactions #7982 @hi-rustin
    * Fix the issue that `sasl-password` in the `changefeed query` result is not masked #7182 @dveeden
    * Fix the issue that data is lost when a user quickly deletes a replication task and then creates another one with the same task name #7657 @overvenus
  - TiDB Data Migration (DM)
    * Fix a bug that DM might raise an error during precheck when the downstream database name in `SHOW GRANTS` contains a wildcard ("*") #7645 @lance6716
    * Fix the issue that DM prints too many logs caused by "COMMIT" in binlog query events #7525 @liumengya94
    * Fix the issue that the DM task fails to start when only `ssl-ca` is configured for SSL #7941 @liumengya94
    * Fix a bug that when the expression filters of both "update" and "non-update" types are specified in one table, all `UPDATE` statements are skipped #7831 @lance6716
    * Fix a bug that when only one of `update-old-value-expr` or `update-new-value-expr` is set for a table, the filter rule does not take effect or DM panics #7774 @lance6716
  - TiDB Lightning
    * Fix the memory leakage issue when TiDB Lightning imports a huge source data file #39331 @dsdashun
    * Fix the issue that TiDB Lightning prechecks cannot find dirty data left by previously failed imports #39477 @dsdashun

16.8.3 TiDB 6.1.3 Release Notes

Release date: December 5, 2022

TiDB version: 6.1.3

Quick access: Quick start | Production deployment | Installation packages

16.8.3.1 Compatibility changes

- Tools
  - TiCDC
    * Change the default value of `transaction-atomicity` from `table` to `none`, which helps reduce replication latency and reduce OOM risks, and ensures that only a few transactions (the size of a single transaction exceeds 1024 rows) are split, instead of all transactions #7505 #5231 @asddongmen

16.8.3.2 Improvements

- PD
  - Optimize the granularity of locks to reduce lock contention and improve the capability of processing heartbeat in high concurrency #5586 @rleungx
- Tools
  - TiCDC
    * Enable transaction split and disable the safe mode of a changefeed in TiCDC by default to improve performance #7505 @asddongmen
    * Improve the performance of Kafka protocol encoder #7540, #7532, #7543 @sdojjy @3AceShowHand
- Others
  - Upgrade the Go compiler version of TiDB from go1.18 to go1.19, which improves the TiDB stability. Specifically, a Go environment variable `GOMEMLIMIT` is introduced to keep the memory usage of TiDB below a certain threshold. This helps mitigate most OOM issues. For more information, see Mitigate OOM issues by configuring the `GOMEMLIMIT`.

16.8.3.3 Bug fixes

- TiDB
  - Fix the issue that the `grantor` field is missing in the `mysql.tables_priv` table #38293 @CbcWestwolf
  - Fix the issue of the wrong query result that occurs when the mistakenly pushed-down conditions are discarded by Join Reorder #38736 @winoros
  - Fix the issue that the lock acquired by `get_lock()` cannot hold for more than 10 minutes #38706 @tangenta
  - Fix the issue that the auto-increment column cannot be used with check constraint #38894 @YangKeao
  - Fix the issue that the gPRC log is output to a wrong file #38941 @xhebox
  - Fix the issue that the TiFlash sync status of a table is not deleted from etcd when the table is truncated or dropped #37168 @CalvinNeo
  - Fix the issue that data files can be accessed unrestrainedly via data source name injection (CVE-2022-3023) #38541 @lance6716
  - Fix the issue that the function `str_to_date` returns wrong result in the `NO_ZERO_DATE` SQL mode #39146 @mengxin9014
  - Fix the issue that statistics collection tasks in the background might panic #35421 @lilinghai
  - Fix the issue that in some scenarios the pessimistic lock is incorrectly added to the non-unique secondary index #36235 @ekexium
- PD
  - Fix inaccurate Stream timeout and accelerate leader switchover #5207 @CabinfeverB
- TiKV
  - Fix abnormal Region competition caused by expired lease during snapshot acquisition #13553 @SpadeA-Tang
- TiFlash
  - Fix the issue that logical operators return wrong results when the argument type is `UInt8` #6127 @xzhangxian1008
  - Fix the issue that wrong data input for `CAST(value AS DATETIME)` causing high TiFlash sys CPU #5097 @xzhangxian1008
  - Fix the issue that heavy write pressure might generate too many column files in the delta layer #6361 @lidezhu
  - Fix the issue that column files in the delta layer cannot be compacted after restarting TiFlash #6159 @lidezhu
- Tools

- Backup & Restore (BR)
  - Fix the issue that restore tasks fail when using old framework for collations in databases or tables #39150 @MoCuishle28
- TiCDC
  - Fix data loss occurred in the scenario of executing DDL statements first and then pausing and resuming the changefeed #7682 @asddongmen
  - Fix the issue that the sink component gets stuck if the downstream network is unavailable #7706 @hicqu
- TiDB Data Migration (DM)
  - Fix the issue that when `collation_compatible` is set to `"strict"`, DM might generate SQL with duplicated collations #6832 @lance6716
  - Fix the issue that DM tasks might stop with an `Unknown placement policy` error #7493 @lance6716
  - Fix the issue that relay logs might be pulled from upstream again in some cases #7525 @liumengya94
  - Fix the issue that data is replicated for multiple times when a new DM worker is scheduled before the existing worker exits #7658 @GMHDBJD

16.8.4 TiDB 6.1.2 Release Notes

Release date: October 24, 2022

TiDB version: 6.1.2

Quick access: Quick start | Production deployment | Installation packages

16.8.4.1 Improvements

- TiDB
  - Allow setting placement rules and TiFlash replicas at the same time in one table #37171 @lcwangchao
- TiKV
  - Support configuring the `unreachable_backoff` item to avoid Raftstore broadcasting too many messages after one peer becomes unreachable #13054 @5kbpers
  - Support configuring the RocksDB write stall settings to a value smaller than the flow control threshold #13467 @tabokie
- Tools
  - TiDB Lightning

    * Add retryable errors during checksum to improve robustness #37690 @D3Hunter

  - TiCDC

    * Enhance the performance of the region worker by handling resolved TS in a batch #7078 @sdojjy

16.8.4.2 Bug fixes

- TiDB

  - Fix the issue that database-level privileges are incorrectly cleaned up #38363 @dveeden
  - Fix the incorrect output of `SHOW CREATE PLACEMENT POLICY` #37526 @xhebox
  - Fix the issue that when one PD node goes down, the query of `information_schema.TIKV_REGION_STATUS` fails due to not retrying other PD nodes #35708 @tangenta
  - Fix the issue that the `UNION` operator might return unexpected empty result #36903 @tiancaiamao
  - Fix the wrong result that occurs when enabling dynamic mode in partitioned tables for TiFlash #37254 @wshwsh12
  - Fix the issue that the Region cache is not cleaned up in time when the Region is merged #37141 @sticnarf
  - Fix the issue that the KV client sends unnecessary ping messages #36861 @jackysp
  - Fix the issue that the `EXPLAIN ANALYZE` statement with DML executors might return result before the transaction commit finishes #37373 @cfzjywxk
  - Fix the issue that `GROUP CONCAT` with `ORDER BY` might fail when the `ORDER BY` clause contains a correlated subquery #18216 @winoros
  - Fix the issue that `Can't find column` is reported if an `UPDATE` statement contains common table expressions (CTE) #35758 @AilinKid
  - Fix the issue that the `EXECUTE` might throw an unexpected error in specific scenarios #37187 @Reminiscent

- TiKV

  - Fix the issue that the snapshot data might be incomplete caused by batch snapshot across Regions #13553 @SpadeA-Tang
  - Fix the issue of QPS drop when flow control is enabled and `level0_slowdown_trigger` is set explicitly #11424 @Connor1996
  - Fix the issue that causes permission denied error when TiKV gets an error from the web identity provider and fails back to the default provider #13122 @3pointer
  - Fix the issue that the TiKV service is unavailable for several minutes when a TiKV instance is in an isolated network environment #12966 @cosven

- PD
  - Fix the issue that the statistics of the Region tree might be inaccurate #5318 @rleungx
  - Fix the issue that the TiFlash learner replica might not be created #5401 @HunDunDM
  - Fix the issue that PD cannot correctly handle dashboard proxy requests #5321 @HunDunDM
  - Fix the issue that unhealthy Region might cause PD panic #5491 @nolouch
- TiFlash
  - Fix the issue that I/O Limiter might incorrectly throttle the I/O throughput of query requests after bulk writes, which reduces the query performance #5801 @JinheLin
  - Fix the issue that a window function might cause TiFlash to crash when the query is canceled #5814 @SeaRise
  - Fix the panic that occurs after creating the primary index with a column containing the `NULL` value #5859 @JaySon-Huang
- Tools
  - TiDB Lightning
    - Fix panic of TiDB Lightning caused by invalid metric counters #37338 @D3Hunter
  - TiDB Data Migration (DM)
    - Fix the issue that upstream table structure information is lost when DM tasks enter the sync unit and are interrupted #7159 @lance6716
    - Fix large transaction errors by splitting SQL statements when saving checkpoints #5010 @lance6716
    - Fix the issue that DM precheck requires the `SELECT` privilege on `INFORMATION_SCHEMA` #7317 @lance6716
    - Fix the issue that DM-worker triggers a deadlock error after running DM tasks with fast/full validators #7241 @buchuitoudegou
    - Fix the issue that DM reports the `Specified key was too long` error #5315 @lance6716
    - Fix the issue that latin1 data might be corrupted during replication #7028 @lance6716
  - TiCDC
    - Fix the issue that the cdc server might panic if it receives an HTTP request before the cdc server fully starts #6838 @asddongmen
    - Fix the log flooding issue during upgrade #7235 @hi-rustin
    - Fix the issue that changefeed's redo log files might be deleted by mistake #6413 @hi-rustin

    * Fix the issue that TiCDC might become unavailable when too many operations in an etcd transaction are committed #7131 @hi-rustin
    * Fix the issue that data inconsistency might occur when non-reentrant DDL statements in redo logs are executed twice #6927 @hicqu
  - Backup & Restore (BR)
    * Fix the issue that the regions are not balanced because the concurrency is set too large during the restoration #37549 @3pointer
    * Fix the issue that might lead to backup and restoration failure if special characters exist in the authorization key of external storage #37469 @MoCuishle28

16.8.5 TiDB 6.1.1 Release Notes

Release date: September 1, 2022

TiDB version: 6.1.1

Quick access: Quick start | Production deployment | Installation packages

16.8.5.1 Compatibility changes

- TiDB
  - Make the `SHOW DATABASES LIKE ···` statement case-insensitive #34766 @e1ijah1
  - Change the default value of `tidb_enable_outer_join_reorder` from `1` to `0`, which disables Join Reorder's support for Outer Join by default.
- Diagnosis
  - Disable the Continuous Profiling feature by default, which avoids the possible TiFlash crash issue that occurs when this feature is enabled. For details, see #5687 @mornyx

16.8.5.2 Other changes

- Add the following contents in the `TiDB-community-toolkit` binary package. For details, see TiDB Installation Packages.
  - `server-{version}-linux-amd64.tar.gz`
  - `grafana-{version}-linux-amd64.tar.gz`
  - `alertmanager-{version}-linux-amd64.tar.gz`
  - `prometheus-{version}-linux-amd64.tar.gz`
  - `blackbox_exporter-{version}-linux-amd64.tar.gz`
  - `node_exporter-{version}-linux-amd64.tar.gz`
- Introduce multi-level support for different quality standards on the combination of operating systems and CPU architectures. See OS and platform requirements.

16.8.5.3 Improvements

- TiDB
  - Add a new optimizer `SEMI_JOIN_REWRITE` to improve the performance of `EXISTS` queries #35323 @winoros
- TiKV
  - Support compressing the metrics response using gzip to reduce the HTTP body size #12355 @winoros
  - Support reducing the amount of data returned for each request by filtering out some metrics using the `server.simplify-metrics` configuration item #12355 @glorv
  - Support dynamically modifying the number of sub-compaction operations performed concurrently in RocksDB (`rocksdb.max-sub-compactions`) #13145 @ethercflow
- PD
  - Improve the scheduling speed of Balance Region in specific stages #4990 @bufferflies
- Tools
  - TiDB Lightning
    * Add a retry mechanism on errors such as `stale command` to improve import success rate #36877 @D3Hunter
  - TiDB Data Migration (DM)
    * Users can manually set the amount of concurrency for lightning loader #5505 @buchuitoudegou
  - TiCDC
    * Add a sink uri parameter `transaction-atomicity` to support splitting the large transaction in a changefeed. This can greatly reduce the latency and memory consumption of large transactions #5231 @CharlesCheung96
    * Reduce performance overhead caused by runtime context switching in multi-Region scenarios #5610 @hicqu
    * Enhance the MySQL sink to turn off the safe mode automatically #5611 @overvenus

16.8.5.4 Bug fixes

- TiDB
  - Fix the issue that `INL_HASH_JOIN` might hang when used with `LIMIT` #35638 @guo-shaoge
  - Fix the issue that TiDB might panic when executing the `UPDATE` statement #32311 @Yisaer
  - Fix a bug that TiDB might send coprocessor requests when executing the `SHOW COLUMNS` statement #36496 @tangenta
  - Fix a bug that TiDB might return the `invalid memory address or nil pointer dereference` error when executing the `SHOW WARNINGS` statement #31569 @zyguan
  - Fix a bug that in the static partition prune mode, SQL statements with an aggregate condition might return wrong result when the table is empty #35295 @tiancaiamao
  - Fix the issue that the Join Reorder operation will mistakenly push down its Outer Join condition #37238 @winoros
  - Fix the issue that CTE-schema hash code is cloned mistakenly, which causes the `Can't find column ... in schema ...` error when CTE is referenced more than once #35404 @AilinKid
  - Fix the issue that the wrong join reorder in some right outer join scenarios causes wrong query result #36912 @winoros
  - Fix the issue of incorrectly inferred null flag of the TiFlash `firstrow` aggregate function in the EqualAll case #34584 @fixdb
  - Fix the issue that Plan Cache does not work when a binding is created with the `IGNORE_PLAN_CACHE` hint #34596 @fzzf678
  - Fix the issu that an `EXCHANGE` operator is missing between the hash-partition window and the single-partition window #35990 @LittleFall
  - Fix the issue that partitioned tables cannot fully use indexes to scan data in some cases #33966 @mjonss
  - Fix the issue of wrong query result when a wrong default value is set for partial aggregation after the aggregation is pushed down #35295 @tiancaiamao
  - Fix the issue that querying partitioned tables might get the `index-out-of-range` error in some cases #35181 @mjonss
  - Fix the issue that a partition is incorrectly pruned if a partition key is used in the query condition and the collate is different from the one in the query partition table #32749 @mjonss
  - Fix the issue that when TiDB Binlog is enabled, executing the `ALTER SEQUENCE` statement might cause a wrong metadata version and cause Drainer to exit #36276 @AilinKid
  - Fix the issue of incorrect TiDB status that might appear on startup in some extreme cases #36791 @xhebox
  - Fix the potential `UnknownPlanID` issue that occurs when querying the execution plans for partitioned tables in TiDB Dashboard #35153 @time-and-fate

  - Fix the issue that the column list does not work in the LOAD DATA statement #35198 @SpadeA-Tang
  - Fix the issue of the `data and columnID count not match` error that occurs when inserting duplicated values with TiDB Binlog enabled #33608 @zyguan
  - Remove the limitation of `tidb_gc_life_time` #35392 @TonsnakeLin
  - Fix the `LOAD DATA` statement dead loop when an empty filed terminator is used #33298 @zyguan
  - Avoid sending requests to unhealthy TiKV nodes to improve availability #34906 @sticnarf

- TiKV

  - Fix a bug that Regions might be overlapped if Raftstore is busy #13160 @5kbpers
  - Fix the issue that PD does not reconnect to TiKV after the Region heartbeat is interrupted #12934 @bufferflies
  - Fix the issue that TiKV panics when performing type conversion for an empty string #12673 @wshwsh12
  - Fix the issue of inconsistent Region size configuration between TiKV and PD #12518 @5kbpers
  - Fix the issue that encryption keys are not cleaned up when Raft Engine is enabled #12890 @tabokie
  - Fix the panic issue that might occur when a peer is being split and destroyed at the same time #12825 @BusyJay
  - Fix the panic issue that might occur when the source peer catches up logs by snapshot in the Region merge process #12663 @BusyJay
  - Fix the issue of frequent PD client reconnection that occurs when the PD client meets an error #12345 @Connor1996
  - Fix potential panic when parallel recovery is enabled for Raft Engine #13123 @tabokie
  - Fix the issue that the Commit Log Duration of a new Region is too high, which causes QPS to drop #13077 @Connor1996
  - Fix rare panics when Raft Engine is enabled #12698 @tabokie
  - Avoid redundant log warnings when proc filesystem (procfs) cannot be found #13116 @tabokie
  - Fix the wrong expression of `Unified Read Pool CPU` in dashboard #13086 @glorv
  - Fix the issue that when a Region is large, the default `region-split-check-diff` might be larger than the bucket size #12598 @tonyxuqqi
  - Fix the issue that TiKV might panic when Apply Snapshot is aborted and Raft Engine is enabled #12470 @tabokie
  - Fix the issue that the PD client might cause deadlocks #13191 @bufferflies #12933 @BurtonQin

- PD

  - Fix the issue that the online progress is inaccurate when label configurations of cluster nodes are invalid #5234 @rleungx
  - Fix PD panics caused by the issue that gRPC handles errors inappropriately when `enable-forwarding` is enabled #5373 @bufferflies
  - Fix the issue that `/regions/replicated` might return a wrong status #5095 @rleungx

- TiFlash

  - Fix the issue that TiFlash crashes after dropping a column of a table with clustered indexes in some situations #5154 @hongyunyan
  - Fix the issue that the `format` function might return a `Data truncated` error #4891 @xzhangxian1008
  - Fix the issue that some obsolete data might persist in storage and cannot be deleted #5659 @lidezhu
  - Fix unnecessary CPU usage in some edge cases #5409 @breezewish
  - Fix a bug that TiFlash cannot work in a cluster using IPv6 #5247 @solotzg
  - Fix a bug that TiFlash might crash due to an error in parallel aggregation #5356 @gengliqi
  - Fix a bug that thread resources might leak in case of `MinTSOScheduler` query errors #5556 @windtalker

- Tools

  - TiDB Lightning

    * Fix the issue that TiDB Lightning fails to connect to TiDB when TiDB uses an IPv6 host #35880 @D3Hunter
    * Fix the `read index not ready` error by adding a retry mechanism #36566 @D3Hunter
    * Fix the issue that sensitive information in logs is printed in server mode #36374 @lichunzhu
    * Fix the issue that TiDB Lightning does not support columns starting with slash, number, or non-ascii characters in Parquet files #36980 @D3Hunter
    * Fix the issue that de-duplication might cause TiDB Lightning to panic in extreme cases #34163 @ForwardStar

  - TiDB Data Migration (DM)

    * Fix the issue that the `txn-entry-size-limit` configuration item does not take effect in DM #6161 @ForwardStar
    * Fix the issue that the `check-task` command cannot handle special characters #5895 @Ehco1996
    * Fix the issue of possible data race in `query-status` #4811 @lyzx2001
    * Fix the different output format for the `operate-schema` command #5688 @ForwardStar
    * Fix goroutine leak when relay meets an error #6193 @lance6716

    * Fix the issue that DM Worker might get stuck when getting DB Conn #3733 @lance6716
    * Fix the issue that DM fails to start when TiDB uses an IPv6 host #6249 @D3Hunter

- TiCDC
    * Fix the wrong maximum compatible version number #6039 @hi-rustin
    * Fix a bug that may cause the cdc server to panic when it receives an HTTP request before it fully starts #5639 @asddongmen
    * Fix the ddl sink panic issue when the changefeed sync-point is enabled #4934 @asddongmen
    * Fix the issue that a changefeed is stuck in some scenarios when sync-point is enabled #6827 @hicqu
    * Fix a bug that changefeed API does not work properly after the cdc server restarts #5837 @asddongmen
    * Fix the data race issue in the black hole sink #6206 @asddongmen
    * Fix the TiCDC panic issue when you set `enable-old-value = false` #6198 @hi-rustin
    * Fix the data consistency issue when the redo log feature is enabled #6189 #6368 #6277 #6456 #6695 #6764 #6859 @asddongmen
    * Fix poor redo log performance by writing redo events asynchronously #6011 @CharlesCheung96
    * Fix the issue that the MySQL sink cannot connect to IPv6 addresses #6135 @hi-rustin

- Backup & Restore (BR)
    * Fix a bug that BR reports `ErrRestoreTableIDMismatch` in RawKV mode #35279 @3pointer
    * Adjust the backup data directory structure to fix backup failure caused by S3 rate limiting in large cluster backup #30087 @MoCuishle28
    * Fix incorrect backup time in the summary log #35553 @ixuh12

- Dumpling
    * Fix the issue that GetDSN does not support IPv6 #36112 @D3Hunter

- TiDB Binlog
    * Fix a bug that Drainer cannot send requests correctly to Pump when `compressor` is set to `gzip` #1152 @lichunzhu

16.8.6 TiDB 6.1.0 Release Notes

Release date: June 13, 2022

TiDB version: 6.1.0

Quick access: Quick start | Production deployment | Installation packages

In 6.1.0, the key new features or improvements are as follows:

- List partitioning and list COLUMNS partitioning become GA, compatible with MySQL 5.7
- TiFlash partitioned table (dynamic pruning) becomes GA
- Support user-level lock management, compatible with MySQL
- Support non-transactional DML statements (only support `DELETE`)
- TiFlash supports on-demand data compaction
- MPP introduces the window function framework
- TiCDC supports replicating changelogs to Kafka via Avro
- TiCDC supports splitting large transactions during replication, which significantly reduces replication latency caused by large transactions
- The optimistic mode for merging and migrating sharded tables becomes GA

16.8.6.1 New Features

16.8.6.1.1 SQL

- List partitioning and list COLUMNS partitioning become GA. Both are compatible with MySQL 5.7.

  User documents: List partitioning, List COLUMNS partitioning

- TiFlash supports initiating a compact command. (experimental)

  TiFlash v6.1.0 introduces the `ALTER TABLE ... COMPACT` statement, which provides a manual way to compact physical data based on the existing background compaction mechanism. With this statement, you can update data in earlier formats and improve read/write performance any time as appropriate. It is recommended that you execute this statement to compact data after upgrading your cluster to v6.1.0. This statement is an extension of the standard SQL syntax and therefore is compatible with MySQL clients. For scenarios other than TiFlash upgrade, usually there is no need to use this statement.

  User document, #4145

- TiFlash implements the window function framework and supports the following window functions:

  - `RANK()`
  - `DENSE_RANK()`
  - `ROW_NUMBER()`

  User document, #33072

16.8.6.1.2 Observability

- Continuous Profiling supports the ARM architecture and TiFlash.

  User document

- Grafana adds a Performance Overview dashboard to provide a system-level entry for overall performance diagnosis.

  As a new dashboard in the TiDB visualized monitoring component Grafana, Performance Overview provides a system-level entry for overall performance diagnosis. According to the top-down performance analysis methodology, the Performance Overview dashboard reorganizes TiDB performance metrics based on database time breakdown and displays these metrics in different colors. By checking these colors, you can identify performance bottlenecks of the entire system at the first glance, which significantly reduces performance diagnosis time and simplifies performance analysis and diagnosis.

  User document

16.8.6.1.3 Performance

- Support customized Region size (experimental)

  Setting Regions to a larger size can effectively reduce the number of Regions, make Regions easier to manage, and improve the cluster performance and stability. This feature introduces the concept of bucket, which is a smaller range within a Region. Using buckets as the query unit can optimize concurrent query performance when Regions are set to a larger size. Using buckets as the query unit can also dynamically adjust the sizes of hot Regions to ensure the scheduling efficiency and load balance. This feature is currently experimental. It is not recommended to use it in production environments.

  User document, #11515

- Use Raft Engine as the default log storage engine

  Since v6.1.0, TiDB uses Raft Engine as the default storage engine for logs. Compared with RocksDB, Raft Engine can reduce TiKV I/O write traffic by up to 40% and CPU usage by 10%, while improving foreground throughput by about 5% and reducing tail latency by 20% under certain loads.

  User document, #95

- Support the join order hint syntax

  - The `LEADING` hint reminds the optimizer to use the specified order as the prefix of join operations. A good prefix of join can quickly reduce the amount of data at the early phase of join and improve the query performance.
  - The `STRAIGHT_JOIN` hint reminds the optimizer to join tables in an order that is consistent with the order of tables in the `FROM` clause.

This provides a method for you to fix the order of table joins. A proper use of the hints can effectively enhance the SQL performance and cluster stability.

User document: `LEADING`, `STRAIGHT_JOIN`, #29932

- TiFlash supports four more functions:
  - `FROM_DAYS`
  - `TO_DAYS`
  - `TO_SECONDS`
  - `WEEKOFYEAR`

  User document, #4679, #4678, #4677

- TiFlash supports partitioned tables in dynamic pruning mode.

  To enhance performance in OLAP scenarios, dynamic pruning mode is supported for partitioned tables. If your TiDB is upgraded from versions earlier than v6.0.0, it is recommended that you manually update statistics of existing partitioned tables, so as to maximize the performance (not required for new installations or new partitions created after upgrade to v6.1.0).

  User documents: Access partitioned tables in the MPP mode, Dynamic pruning mode, #3873

16.8.6.1.4 Stability

- Automatic recovery from SST corruption

  When RocksDB detects a damaged SST file in the background, TiKV will try to schedule the affected Peer and recover its data using other replicas. You can set the maximum allowable time for the recovery using the `background-error-recovery-window` parameter. If the recovery operation is not completed within the time window, TiKV will panic. This feature automatically detects and recovers recoverable damaged storage, thus improving the cluster stability.

  User document, #10578

- Support non-transactional DML statement

  In the scenarios of large data processing, a single SQL statement with a large transaction might have a negative impact on the cluster stability and performance. Since v6.1.0, TiDB supports providing a syntax in which a `DELETE` statement is split into multiple statements for batch processing. The split statements compromise transactional atomicity and isolation but greatly improve the cluster stability. For detailed syntax, see `BATCH`.

  User document

- TiDB supports configuring the maximum GC wait time

  The transaction of TiDB adopts the Multi-Version Concurrency Control (MVCC) mechanism. When the newly written data overwrites the old data, the old data is not replaced, and both versions of data are stored. The old data is cleaned up by the Garbage Collection (GC) task periodically, which helps reclaim storage space to improve the performance and stability of the cluster. GC is triggered every 10 minutes by default. To ensure that long-running transactions can access the corresponding historical data, when there are transactions in execution, the GC task is delayed. To ensure that the GC task is not delayed indefinitely, TiDB introduces the system variable `tidb_gc_max_wait_time` to control the maximum delay time of the GC task. If the maximum delay time is exceeded, the GC will be forcibly executed. The default value of the variable is 24 hours. This feature enables you to control the relationship between the GC waiting time and the long-running transaction, which improves the stability of the cluster.

  User document

- TiDB supports configuring the maximum execution time for automatic statistics collection tasks

  Databases can effectively understand the distribution of data by collecting statistics, which helps generate reasonable execution plans and improve the efficiency of SQL execution. TiDB regularly collects statistics on frequently changed data objects in the background. However, collecting statistics takes up cluster resources and might affect the stable operation of the business during business peaks.

  Starting from v6.1.0, TiDB introduces `tidb_max_auto_analyze_time` to control the maximum execution time for background statistics collection, which is 12 hours by default. When the application does not encounter a resource bottleneck, it is recommended not to modify this variable so that TiDB can timely collect statistics.

  User document

16.8.6.1.5 Ease of use

- Support a one-stop online data recovery when multiple replicas are lost

  Before TiDB v6.1.0, when multiple Region replicas are lost because of machine failure, users have to stop all TiKV servers and use TiKV Control to recover TiKV one by one. Since TiDB v6.1.0, the recovery process is fully automated, does not require to stop TiKV, and does not affect other applications online. The recovery process can be triggered using PD Control and provides a more user-friendly summary information.

  User document, #10483

- Support viewing history statistics collection tasks

  You can use the `SHOW ANALYZE STATUS` statement to show cluster-level statistics collection tasks. Before TiDB v6.1.0, the `SHOW ANALYZE STATUS` statement shows instance-level tasks only, and history task records are cleared after a TiDB restart. Therefore,

you cannot view history statistics collection time and details. Starting from TiDB v6.1.0, history records of statistics collection tasks are persisted and can be queried after a cluster restart, which provides a reference for troubleshooting query performance issues caused by statistics anomalies.

User document

- Support modifying TiDB, TiKV, and TiFlash configurations dynamically

In earlier TiDB versions, after modifying a configuration item, you must restart the cluster to make the modification effective. This might interrupt online services. To address this issue, TiDB v6.1.0 introduces the dynamic configuration feature, which allows you to validate a parameter change without restarting the cluster. The specific optimizations are as follows:

```
* Transform some TiDB configuration items to system variables, so that they
    ↪ can be modified dynamically and persisted. Note that the original
    ↪ configuration items are deprecated after transformation. For a
    ↪ detailed list of the transformed configuration items, see [
    ↪ Configuration file parameters](#configuration-file-parameters).
* Support configuring some TiKV parameters online. For a detailed list of
    ↪ the parameters, see [Others](#others).
* Transform the TiFlash configuration item `max_threads` to a system
    ↪ variable `tidb_max_tiflash_threads`, so that the configuration can be
    ↪  modified dynamically and persisted. Note that the original
    ↪ configuration item remains after transformation.
```

For v6.1.0 clusters upgraded (including online and offline upgrades) from earlier versions, note that:

```
* If the configuration items specified in the configuration file before the
    ↪ upgrade already exist, TiDB will automatically update the values of
    ↪ the configured items to those of the corresponding system variables
    ↪ during the upgrade process. In this way, after the upgrade, the
    ↪ system behavior is not affected by parameter optimization.
* The automatic update mentioned above occurs only once during the upgrade.
    ↪ After the upgrade, the deprecated configuration items are no longer
    ↪ effective.
```

This feature allows you to modify parameters dynamically, and validate and persist them, instead of restarting the system and interrupting services. This makes your daily maintenance easier.

User document

- Support killing queries or connections globally

You can control the Global Kill feature using the `enable-global-kill` configuration (enabled by default).

Before TiDB v6.1.0, when an operation consumes a lot of resources and causes cluster stability issues, you have to connect to the target TiDB instance and then run the `KILL TIDB ${id};` command to terminate the target connection and operation. In the case of many TiDB instances, this method is not easy to use and prone to wrong operations. Starting from v6.1.0, the `enable-global-kill` configuration is introduced and enabled by default. You can run the kill command in any TiDB instance to terminate a specified connection and operation, without worrying about incorrectly terminating other queries or sessions by mistake when there is a proxy between the client and TiDB. Currently, TiDB does not support using Ctrl+C to terminate queries or sessions.

User document, #8854

- TiKV API V2 (experimental)

  Before v6.1.0, when TiKV is used as Raw Key Value storage, TiKV only provides basic Key Value read and write capability because it only stores the raw data passed in by the client.

  TiKV API V2 provides a new Raw Key Value storage format and access interface, including:

  - The data is stored in MVCC and the change timestamp of the data is recorded. This feature will lay the foundation for implementing Change Data Capture and incremental backup and restore.
  - Data is scoped according to different usage and supports co-existence of a single TiDB cluster, Transactional KV, RawKV applications.

Due to significant changes in the underlying storage format, after enabling API V2, you cannot roll back a TiKV cluster to a version earlier than v6.1.0. Downgrading TiKV might result in data corruption.

```
[User document](#api-version-new-in-v610), [#11745](https://github.com/tikv/
    ↪ tikv/issues/11745)
```

16.8.6.1.6 MySQL compatibility

- Support compatibility with user-level lock management with MySQL

  User-level locks are a user-named lock management system provided by MySQL through built-in functions. The locking functions can provide lock blocking, waiting, and other lock management capabilities. User-level locks are also widely used in ORM frameworks, such as Rails, Elixir, and Ecto. Since v6.1.0, TiDB has supported MySQL-compatible user-level lock management, and supports `GET_LOCK`, `RELEASE_LOCK`, and `RELEASE_ALL_LOCKS` functions.

  User document, #14994

16.8.6.1.7 Data migration

- The optimistic mode for merging and migrating sharded tables becomes GA

  DM adds a large number of scenario tests for tasks that merge and migrate data from sharded tables in the optimistic mode, which covers 90% of the daily use scenarios. Compared with the pessimistic mode, the optimistic mode is simpler and more efficient to use. It is recommended to use the optimistic mode preferably after you are familiar with the usage notes.

  User document

- DM WebUI supports starting a task according to the specified parameters

  When starting a migration task, you can specify a start time and a safe mode duration. This is especially useful when you create an incremental migration task with lots of sources, eliminating the need to specify the binlog start position specifically for each source.

  User document, #5442

16.8.6.1.8 TiDB data share subscription

- TiDB supports data sharing with various third-party data ecosystems

  - TiCDC supports sending TiDB incremental data to Kafka in the Avro format, allowing data sharing with third-parties, such as KSQL and Snowflake via Confluent.

    User document, #5338

  - TiCDC supports dispatching incremental data from TiDB to different Kafka topics by table, which, combined with the Canal-json format, allows sharing data directly with Flink.

    User document, #4423

  - TiCDC supports SASL GSSAPI authentication types and adds SASL authentication examples using Kafka.

    User document, #4423

- TiCDC supports replicating `charset=GBK` tables.

  User document, #4806

16.8.6.2 Compatibility changes

16.8.6.2.1 System variables

Variable name	Change type	Description
tidb_enable_list_partition	Modified	The default value is changed from OFF to ON.
tidb_mem_quota_query	Modified	This variable adds the GLOBAL scope, and the variable value persists to the cluster.

Variable name	Change type	Description
tidb_query_log_max_len	Modified	The variable scope is changed from INSTANCE to GLOBAL. The variable value persists to the cluster, and the value range is changed to [0, 1073741824].

Variable name	Change type	Description
require_secure_transport	Newly added	This setting was previously a `tidb.toml` option (`security.require-secure-transport`), but changed to a system variable starting from TiDB v6.1.0.

Variable name	Change type	Description
tidb_committer_concurrency	Newly added	This setting was previously a `tidb.toml` option (`performance.committer-concurrency`), but changed to a system variable starting from TiDB v6.1.0.

Variable name	Change type	Description
tidb_enable_auto_analyze	Newly added	This setting was previously a `tidb.toml` option (`run-auto-analyze`), but changed to a system variable starting from TiDB v6.1.0.

Variable name	Change type	Description
tidb_enable_only_full_group_by_check ↪	Newly added	This variable controls the behavior when TiDB performs the ONLY_FULL_GOUP_BY ↪ check.

Variable name	Change type	Description
tidb_enable_outer_join_reorder ↪	Newly added	Since v6.1.0, the Join Reorder algorithm of TiDB supports Outer Join. This variable controls the support behavior, and the default value is ON.

Variable name	Change type	Description
tidb_enable_prepared_plan_cache	Newly added	This setting was previously a tidb. toml option (prepared - plan - cache . enabled), but changed to a system variable starting from TiDB v6.1.0.

Variable name	Change type	Description
tidb_gc_max_wait_time ↪	Newly added	This variable is used to set the maximum time of GC safe point blocked by uncommitted transactions.

Variable name	Change type	Description
tidb_max_auto_analyze_time	Newly added	This variable is used to specify the maximum execution time of auto analyze.
tidb_max_tiflash_threads ↪	Newly added	This variable is used to set the maximum concurrency for TiFlash to execute a request.

Variable name	Change type	Description
tidb_memory_oom_action ↪	Newly added	This setting was previously a tidb ↪ . ↪ toml ↪ option (oom ↪ - ↪ action ↪), but changed to a system variable starting from TiDB v6.1.0.

Variable name	Change type	Description
tidb_mem_quota_analyze ↪	Newly added	This variable controls the maximum memory usage when TiDB updates statistics, including manually executed ANALYZE ↪ ↪ TABLE ↪ by users and automatic analyze tasks in the TiDB background.

Variable name	Change type	Description
tidb_non_transactional_ignore_error ↪	Newly added	This variable specifies whether to return error immediately when an error occurs in a non-transactional DML statement.

Variable name	Change type	Description
tidb_prepared_plan_cache_memory_guard_ratio	Newly added	This setting was previously a tidb. toml option (prepared - plan - cache . memory - guard - ratio), but changed to a system variable starting from TiDB v6.1.0.

Variable name	Change type	Description
tidb_prepared_plan_cache_size	Newly added	This setting was previously a `tidb.toml` option (`prepared-plan-cache.capacity`), but changed to a system variable starting from TiDB v6.1.0.

Variable name	Change type	Description
tidb_stats_cache_mem_quota ↪	Newly added	This variable sets the memory quota for the TiDB statistics cache.

16.8.6.2.2 Configuration file parameters

Configuration file	Configuration	Change type	Description
TiDB	`committer-concurrency`	Deleted	Replaced by the system variable `tidb_committer_concurrency`. This configuration item is no longer valid, if you want to modify the value, you need to modify the corresponding system variable.

Configuration file	Configuration	Change type	Description
TiDB	`lower` ↪ `-` ↪ `case` ↪ `-` ↪ `table` ↪ `-` ↪ `names` ↪	Deleted	Currently TiDB only supports `lower_case_table_name` ↪ `=2` ↪ . If another value is set, after the cluster is upgraded to v6.1.0, the value is lost.

Configuration file	Configuration	Change type	Description
TiDB	`mem-quota-query`	Deleted	Replaced by the system variable `tidb_mem_quota_query`. This configuration item is no longer valid, if you want to modify the value, you need to modify the corresponding system variable.

Configuration file	Configuration	Change type	Description
TiDB	`oom-action`	Deleted	Replaced by the system variable `tidb_mem_oom_action`. This configuration item is no longer valid, if you want to modify the value, you need to modify the corresponding system variable.

Configuration file	Configuration	Change type	Description
TiDB	`prepared-plan-cache`	Deleted	Replaced by the system variable `tidb_prepared_plan_cache_size`. This configuration item is no longer valid, if you want to modify the value, you need to modify the corresponding system variable.

Configuration file	Configuration	Change type	Description
TiDB	`prepared-plan-cache.enabled`	Deleted	Replaced by the system variable `tidb_enable_prepared_plan_cache`. This configuration item is no longer valid, if you want to modify the value, you need to modify the corresponding system variable.

Configuration file	Configuration	Change type	Description
TiDB	`query` ↪ `-` ↪ `log` ↪ `-` ↪ `max` ↪ `-` ↪ `len` ↪	Deleted	Replaced by the system variable `tidb_query_log_max_len` ↪ . This configuration item is no longer valid, if you want to modify the value, you need to modify the corresponding system variable.

Configuration file	Configuration item	Change type	Description
TiDB	`require` ↪ `-` ↪ `secure` ↪ `-` ↪ `transport` ↪	Deleted	Replaced by the system variable `require_secure_transport` ↪ . This configuration item is no longer valid, if you want to modify the value, you need to modify the corresponding system variable.

Configuration file	Configuration item	Change type	Description
TiDB	`run-auto-analyze`	Deleted	Replaced by the system variable `tidb_enable_auto_analyze`. This configuration item is no longer valid, if you want to modify the value, you need to modify the corresponding system variable.

Configuration file	Configuration	Change type	Description
TiDB	`enable-global-kill`	Newly added	Controls whether to enable the Global Kill (terminating queries or connections across instances) feature. When the value is `true`, both `KILL` and `KILL TIDB` statements can terminate queries or connections

Configuration file	Configuration	Change type	Description
TiDB	`enable-stats-cache-mem-quota`	Newly added	Controls whether to enable the memory quota for the statistics cache.
TiKV	`raft.engine.enable`	Modified	The default value is changed from `FALSE` to `TRUE`.

Configuration file	Configuration	Change type	Description
TiKV	`region`	Modified	The default value is changed from 1440000 to `region` ↪ `-` ↪ `split` ↪ `-` ↪ `keys` ↪ ↪ `/` ↪ ↪ `2` ↪ ↪ `*` ↪ ↪ `3` ↪ `.`

Configuration file	Configuration	Change type	Description
TiKV	`region`	Modified	The default value is changed from 144 MB to `region` ↪ `-` ↪ `split` ↪ `-` ↪ `size` ↪ ↪ `/` ↪ ↪ `2` ↪ ↪ `*` ↪ ↪ `3` ↪ .
TiKV	`coprocessor` ↪ `.` ↪ `enable` ↪ `-` ↪ `region` ↪ `-` ↪ `bucket` ↪	Newly added	Determines whether to divide a Region into smaller ranges called buckets.

Configuration file	Configuration	Change type	Description
TiKV	coprocessor.region-bucket-size	Newly added	The size of a bucket when enable is true.
TiKV	causal-ts.renew-batch-min-size	Newly added	The minimum number of locally cached timestamps.
TiKV	causal-ts.renew-interval	Newly added	The interval at which the locally cached timestamps are refreshed.

Configuration file	Configuration	Change type	Description
TiKV	`max-snapshot-file-raw-size`	Newly added	The snapshot file will split to multiple files when the snapshot file size exceeds this value.
TiKV	`raft-engine.memory-limit`	Newly added	Specifies the limit on the memory usage of Raft Engine.

Configuration file	Configuration	Change type	Description
TiKV	`storage.background-error-recovery-window`	Newly added	The maximum recovery time is allowed after RocksDB detects a recoverable background error.

Configuration file	Configuration	Change type	Description
TiKV	`storage.api-version`	Newly added	The storage format and interface version used by TiKV when TiKV serves as the raw key-value store.
PD	`scheduler.max-store-preparing-time`	Newly added	Controls the maximum waiting time for the store to go online.

Configuration file	Configuration	Change type	Description
TiCDC	`enable-tls`	Newly added	Whether to use TLS to connect to the downstream Kafka instance.

Configuration file	Configuration	Change type	Description
TiCDC	`sasl-gssapi-service-name`	Newly added	Used to support SASL/GSSAPI authentication for Kafka. For details, see Configure sink URI with `kafka`.
	`sasl-gssapi-realm`		
	`sasl-gssapi-key`		
	`sasl-gssapi-keytab-path`		
	`sasl-gssapi-kerberos-config-path`		

Configuration file	Configuration	Change type	Description
TiCDC	`avro-decimal-handling-mode`	Newly added	Determines the output details of Avro format.
TiCDC	`dispatchers.topic`	Newly added	Controls how TiCDC dispatches incremental data to different Kafka topics.

Configuration file	Configuration	Change type	Description
TiCDC	`dispatchers.partition`	Newly added	`dispatchers.partition` is an alias for `dispatchers.dispatcher`. Controls how TiCDC dispatches incremental data to Kafka partitions.
TiCDC	`schema-registry`	Newly added	Specifies the schema registry endpoint that stores Avro schema.

Configuration file	Configuration	Change type	Description
DM	`worker`	Deleted	This parameter in the `dmctl` ↪ ↪ `start` ↪ `-` ↪ `relay` ↪ command is not recommended for use. Will provide a simpler implementation.
DM	`relay` ↪ `-` ↪ `dir` ↪ in the source configuration file	Deleted	Replaced by the same configuration item in the worker configuration file.

Configuration file	Configuration	Change type	Description
DM	`is-sharding` in the task configuration file	Deleted	Replaced by the `shard-mode` configuration item.
DM	`auto-fix-gtid` in the task configuration file	Deleted	Deprecated in v5.x and officially deleted in v6.1.0.

Configuration file	Configuration	Change type	Description
DM	`meta` ↪ `-` ↪ `dir` ↪ and `charset` ↪ in the source configuration file	Deleted	Deprecated in v5.x and officially deleted in v6.1.0.

16.8.6.2.3 Others

- Enable Prepared Plan Cache by default

  Prepared Plan Cache is enabled by default in new clusters to cache the execution plans for `Prepare` / `Execute` requests. In the subsequent execution, query plan optimization can be skipped and thus leads to a performance boost. Upgraded clusters inherit the configuration from the configuration file. New clusters use the new default values, which means Prepared Plan Cache is enabled by default and each session can cache 100 plans at most (`capacity=100`). For the memory consumption of this feature, see memory management of Prepared Plan Cache.

- Prior to TiDB v6.1.0, `SHOW ANALYZE STATUS` shows instance-level tasks and the task records are cleared after TiDB restarts. Since TiDB v6.1.0, `SHOW ANALYZE STATUS` ↪ shows cluster-level tasks, and the task records persist after the restart. When `tidb_analyze_version = 2`, the `Job_info` column adds the `analyze option` information.

- Damaged SST files in TiKV might cause the TiKV process to panic. Before TiDB v6.1.0, damaged SST files caused TiKV to panic immediately. Since TiDB v6.1.0, the TiKV process will panic 1 hour after SST files are damaged.

- The following TiKV configuration items support modifying values dynamically:

  - `raftstore.raft-entry-max-size`
  - `quota.foreground-cpu-time`

  - `quota.foreground-write-bandwidth`
  - `quota.foreground-read-bandwidth`
  - `quota.max-delay-duration`
  - `server.grpc-memory-pool-quota`
  - `server.max-grpc-send-msg-len`
  - `server.raft-msg-max-batch-size`

- In v6.1.0, some configuration file parameters are converted to system variables. For v6.1.0 clusters upgraded (including online and offline upgrades) from earlier versions, note that:

  - If the configuration items specified in the configuration file before the upgrade already exist, TiDB will automatically update the values of the configured items to those of the corresponding system variables during the upgrade process. In this way, after the upgrade, the system behavior does not change thanks to parameter optimization.
  - The automatic update mentioned above occurs only once during the upgrade. After the upgrade, the deprecated configuration items are no longer effective.

- The Dashboard page is removed from DM WebUI.

- When `dispatchers.topic` and `dispatchers.partition` are enabled, TiCDC cannot be downgraded to versions earlier than v6.1.0.

- TiCDC Changefeed using the Avro protocol cannot be downgraded to versions earlier than v6.1.0.

16.8.6.3 Improvements

- TiDB

  - Improve the performance of the `UnionScanRead` operator #32433
  - Improve the display of task types in the output of `EXPLAIN` (add the MPP task type) #33332
  - Support using `rand()` as the default value of a column #10377
  - Support using `uuid()` as the default value of a column #33870
  - Support modifying the character set of columns from `latin1` to `utf8`/`utf8mb4` #34008

- TiKV

  - Improve the old value hit rate of CDC when using in-memory pessimistic lock #12279
  - Improve the health check to detect unavailable Raftstore, so that the TiKV client can update Region Cache in time #12398
  - Support setting memory limit on Raft Engine #12255

  - TiKV automatically detects and deletes the damaged SST files to improve the product availability #10578
  - CDC supports RawKV #11965
  - Support splitting a large snapshot file into multiple files #11595
  - Move the snapshot garbage collection from Raftstore to background thread to prevent snapshot GC from blocking Raftstore message loops #11966
  - Support dynamic setting of the the maximum message length (`max-grpc-send-msg-len`) and the maximum batch size of gPRC messages (`raft-msg-max-batch-size`) #12334
  - Support executing online unsafe recovery plan through Raft #10483

- PD

  - Support time-to-live (TTL) for region labels #4694
  - Support Region Buckets #4668
  - Disable compiling swagger server by default #4932

- TiFlash

  - Optimize memory calculation for an aggregate operator so that a more efficient algorithm is used in the merge phase #4451

- Tools

  - Backup & Restore (BR)
    * Support backing up and restoring empty databases #33866
  - TiDB Lightning
    * Optimize Scatter Region to batch mode to improve the stability of the Scatter Region process #33618
  - TiCDC
    * TiCDC supports splitting large transactions during replication, which significantly reduces replication latency caused by large transactions #5280

16.8.6.4 Bug fixes

- TiDB

  - Fix the issue of possible panic that might occur when the `in` function processes the `bit` type data #33070
  - Fix the issue of wrong query result because the `UnionScan` operator cannot maintain the order #33175
  - Fix the issue that the Merge Join operator gets wrong results in certain cases #33042

  - Fix the issue that the `index join` result might be wrong in the dynamic pruning mode #33231
  - Fix the issue that data might not be garbage-collected when some partitions of a partitioned table is dropped #33620
  - Fix the issue that some DDL statements might be stuck for a period after the PD node of a cluster is replaced #33908
  - Fix the issue that the TiDB server might run out of memory when the `INFORMATION_SCHEMA.CLUSTER_SLOW_QUERY` table is queried. This issue can be triggered when you check slow queries on the Grafana dashboard #33893
  - Fix the issue that the system variable `max_allowed_packet` does not take effect #31422
  - Fix the issue of memory leak in the TopSQL module #34525 #34502
  - Fix the issue that the Plan Cache might be wrong on the PointGet plan #32371
  - Fix the issue that query result might be wrong when Plan Cache is started in the RC isolation level #34447

- TiKV

  - Fix the issue that the Raft log lag is increasing when a TiKV instance is taken offline #12161
  - Fix the issue that TiKV panics and destroys peers unexpectedly because the target Region to be merged is invalid #12232
  - Fix the issue that TiKV reports the `failed to load_latest_options` error when upgrading from v5.3.1 or v5.4.0 to v6.0.0 or later versions #12269
  - Fix the issue of OOM caused by appending Raft logs when the memory resource is insufficient #11379
  - Fix the issue of TiKV panic caused by the race between destroying peers and batch splitting Regions #12368
  - Fix the issue of TiKV memory usage spike in a short time after `stats_monitor` falls into a dead loop #12416
  - Fix the issue that TiKV reports the `invalid store ID 0` error when using Follower Read #12478

- PD

  - Fix the wrong status code of `not leader` #4797
  - Fix a bug of TSO fallback in some corner cases #4884
  - Fix the issue that a removed tombstone store appears again after the PD leader transfer #4941
  - Fix the issue that scheduling cannot start immediately after the PD leader transfer #4769

- TiDB Dashboard

  - Fix a bug that Top SQL cannot collect the CPU overhead of the SQL statements that were running before the Top SQL feature is enabled #33859

- TiFlash
  - Fix potential data inconsistency after a lot of INSERT and DELETE operations #4956
- Tools
  - TiCDC
    * Fix excessive memory usage by optimizing the way DDL schemas are buffered #1386
    * Fix data loss that occurs in special incremental scanning scenarios #5468
  - TiDB Data Migration (DM)
    * Fix the `start-time` time zone issue and change DM behavior from using the downstream time zone to using the upstream time zone #5271
    * Fix the issue that DM occupies more disk space after the task automatically resumes #3734 #5344
    * Fix the problem that checkpoint flush may cause the data of failed rows to be skipped #5279
    * Fix the issue that in some cases manually executing the filtered DDL in the downstream might cause task resumption failure #5272
    * Fix an issue that the uppercase table cannot be replicated when `case-sensitive: true` is not set #5255
    * Fix the DM worker panic issue that occurs when the primary key is not first in the index returned by the `SHOW CREATE TABLE` statement #5159
    * Fix the issue that CPU usage may increase and a large amount of log is printed when GTID is enabled or when the task is automatically resumed #5063
    * Fix the offline option and other usage issues in DM WebUI #4993
    * Fix the issue that incremental tasks fail to start when GTID is empty in the upstream #3731
    * Fix the issue that empty configurations may cause dm-master to panic #3732
  - TiDB Lightning
    * Fix the issue that the precheck does not check local disk resources and cluster availability #34213
    * Fix the issue of incorrect routing for schemas #33381
    * Fix the issue that the PD configuration is not restored correctly when TiDB Lightning panics #31733
    * Fix the issue of Local-backend import failure caused by out-of-bounds data in the `auto_increment` column #29737
    * Fix the issue of local backend import failure when the `auto_random` or `auto_increment` column is null #34208

16.9 v6.0

16.9.1 TiDB 6.0.0 Release Notes

Release date: April 7, 2022

TiDB version: 6.0.0-DMR

> **Note:**
>
> The TiDB 6.0.0-DMR documentation has been archived. PingCAP encourages you to use the latest LTS version of the TiDB database.

In 6.0.0-DMR, the key new features or improvements are as follows:

- Support placement rules in SQL to provide more flexible management for data placement.
- Add a consistency check between data and indexes at the kernel level, which improves system stability and robustness, with only very low resource overhead.
- Provide Top SQL, a self-serving database performance monitoring and diagnosis feature for non-experts.
- Support Continuous Profiling that collects cluster performance data all the time, reducing MTTR for technical experts.
- Cache hotspot small tables in memory, which greatly improves the access performance, improves the throughput and reduces access latency.
- Optimize in-memory pessimistic locking. Under the performance bottleneck caused by pessimistic locks, memory optimization for pessimistic locks can effectively reduce latency by 10% and increase QPS by 10%.
- Enhance prepared statements to share execution plans, which lessens CPU resource consumption and improves SQL execution efficiency.
- Improve the computing performance of the MPP engine by supporting pushing down more expressions and the general availability (GA) of the elastic thread pool.
- Add DM WebUI to facilitate managing a large number of migration tasks.
- Improve the stability and efficiency of TiCDC when replicating data in large clusters. TiCDC now supports replicating 100,000 tables simultaneously.
- Accelerate leader balancing after restarting TiKV nodes, which improves the speed of business recovery after a restart.
- Support canceling the automatic update of statistics, which reduces resource contention and limits the impact on SQL performance.
- Provide PingCAP Clinic, an automatic diagnosis service for TiDB clusters (Technical Preview version).
- Provide TiDB Enterprise Manager, an enterprise-level database management platform.

Also, as a core component of TiDB's HTAP solution, TiFlashTM is officially open source in this release. For details, see TiFlash repository.

16.9.1.1 Release strategy changes

Starting from TiDB v6.0.0, TiDB provides two types of releases:

- Long-Term Support Releases

  Long-Term Support (LTS) releases are released approximately every six months. An LTS release introduces new features and improvements, and accepts patch releases within its release lifecycle. For example, v6.1.0 will be an LTS release.

- Development Milestone Releases

  Development Milestone Releases (DMR) are released approximately every two months. A DMR introduces new features and improvements, but does not accept patch releases. It is not recommended for on-premises users to use DMR in production environments. For example, v6.0.0-DMR is a DMR.

TiDB v6.0.0 is a DMR, and its version is 6.0.0-DMR.

16.9.1.2 New features

16.9.1.2.1 SQL

- SQL-based placement rules for data

  TiDB is a distributed database with excellent scalability. Usually, data is deployed across multiple servers or even multiple data centers. Therefore, data scheduling management is one of the most important basic capabilities of TiDB. In most cases, users do not need to care about how to schedule and manage data. However, with the increasing application complexity, deployment changes caused by isolation and access latency have become new challenges for TiDB. Since v6.0.0, TiDB officially provides data scheduling and management capabilities based on SQL interfaces. It supports flexible scheduling and management in dimensions such as replica counts, role types, and placement locations for any data. TiDB also supports more flexible management for data placement in multi-service shared clusters and cross-AZ deployments.

  User document

- Support building TiFlash replicas by databases. To add TiFlash replicas for all tables in a database, you only need to use a single SQL statement, which greatly saves operation and maintenance costs.

  User document

16.9.1.2.2 Transaction

- Add a check for data index consistency at the kernel level

  Add a check for data index consistency when a transaction is executed, which improves system stability and robustness, with only very low resource overhead. You can control the check behavior using the `tidb_enable_mutation_checker` and `tidb_txn_assertion_level` variables. With the default configuration, the QPS drop is controlled within 2% in most scenarios. For the error description of the consistency check, see user document.

16.9.1.2.3 Observability

- Top SQL: Performance diagnosis for non-experts

  Top SQL is a self-serving database performance monitoring and diagnosis feature in TiDB Dashboard, for DBAs and App developers, which is now generally available in TiDB v6.0.

  Unlike existing diagnostic features for experts, Top SQL is designed for non-experts: you do not need to traverse thousands of monitoring charts to find correlations or understand TiDB internal mechanisms such as Raft Snapshot, RocksDB, MVCC, and TSO. To use Top SQL for analyzing database load quickly and improving App performance, only basic database knowledge (such as index, lock conflict, and execution plans) is needed.

  Top SQL is not enabled by default. When enabled, Top SQL provides you with the real-time CPU load of each TiKV or TiDB node. Therefore, you can spot SQL statements consuming high CPU loads at first glimpse, and quickly analyze the issues such as database hotspots and sudden load increases. For example, you can use Top SQL to pinpoint and diagnose an unusual query that consumes 90% CPU of a single TiKV node.

  User documentation

- Support Continuous Profiling

  TiDB Dashboard introduces the Continuous Profiling feature, which is now generally available in TiDB v6.0. Continuous profiling is not enabled by default. When enabled, the performance data of individual TiDB, TiKV, and PD instances will be collected all the time, with negligible overhead. With history performance data, technical experts can backtrack and pinpoint the root causes of issues like high memory consumption, even when the issues are difficult to reproduce. In this way, the mean time to recovery (MTTR) can be reduced.

  User document

16.9.1.2.4 Performance

- Cache hotspot small tables

  For user applications in scenarios where hotspot small tables are accessed, TiDB supports explicitly caching the hotspot tables in memory, which greatly improves the access performance, improves the throughput, and reduces access latency. This solution can effectively avoid introducing a third-party cache middleware, reduce the complexity of the architecture, and cut the cost of operation and maintenance. The solution is suitable for scenarios where small tables are frequently accessed but rarely updated, such as the configuration tables or exchange rate tables.

  User document, #25293

- In-memory pessimistic locking

  Since TiDB v6.0.0, in-memory pessimistic locking is enabled by default. After enabling this feature, pessimistic transaction locks are managed in memory. This avoids persisting pessimistic locks and the Raft replication of the lock information, and greatly reduces the overhead of managing pessimistic transaction locks. Under the performance bottleneck caused by pessimistic locks, memory optimization for pessimistic locks can effectively reduce latency by 10% and increase QPS by 10%.

  User document, #11452

- Optimization to get TSO at the Read Committed isolation level

  To reduce query latency, when read-write conflicts are rare, TiDB adds the `tidb_rc_read_check_ts` system variable at the Read Committed isolation level to get less unnecessary TSO. This variable is disabled by default. When the variable is enabled, this optimization avoids getting duplicated TSO to reduce latency in scenarios where there is no read-write conflict. However, in scenarios with frequent read-write conflicts, enabling this variable might cause a performance regression.

  User document, #33159

- Enhance prepared statements to share execution plans

  Reusing SQL execution plans can effectively reduce the time for parsing SQL statements, lessen CPU resource consumption, and improve SQL execution efficiency. One of the important methods of SQL tuning is to reuse SQL execution plans effectively. TiDB has supported sharing execution plans with prepared statements. However, when the prepared statements are closed, TiDB automatically clears the corresponding plan cache. After that, TiDB might unnecessarily parse the repeated SQL statements, affecting the execution efficiency. Since v6.0.0, TiDB supports controlling whether to ignore the `COM_STMT_CLOSE` command through the `tidb_ignore_prepared_cache_close_stmt` parameter (disabled by default). When the parameter is enabled, TiDB ignores the command of closing prepared statements and keeps the execution plan in the cache, improving the reuse rate of the execution plan.

  User document, #31056

- Improve query pushdown

  With its native architecture of separating computing from storage, TiDB supports filtering out invalid data by pushing down operators, which greatly reduces the data transmission between TiDB and TiKV and thereby improves the query efficiency. In v6.0.0, TiDB supports pushing down more expressions and the `BIT` data type to TiKV, improving the query efficiency when computing the expressions and data type.

  User document, #30738

- Optimization of hotspot index

  Writing monotonically increasing data in batches to the secondary index causes an index hotspot and affects the overall write throughput. Since v6.0.0, TiDB supports scattering the index hotspot using the `tidb_shard` function to improve the write performance. Currently, `tidb_shard` only takes effect on the unique secondary index. This application-friendly solution does not require modifying the original query conditions. You can use this solution in the scenarios of high write throughput, point queries, and batch point queries. Note that using the data that has been scattered by range queries in the application might cause a performance regression. Therefore, do not use this function in such cases without verification.

  User document, #31040

- Support dynamic pruning mode for partitioned tables in TiFlash MPP engine (experimental)

  In this mode, TiDB can read and compute the data on partitioned tables using the MPP engine of TiFlash, which greatly improves the query performance of partitioned tables.

  User document

- Improve the computing performance of the MPP engine

  - Support pushing down more functions and operators to the MPP engine

    * Logical functions: `IS`, `IS NOT`
    * String functions: `REGEXP()`, `NOT REGEXP()`
    * Mathematical functions: `GREATEST(int/real)`, `LEAST(int/real)`
    * Date functions: `DAYNAME()`, `DAYOFMONTH()`, `DAYOFWEEK()`, `DAYOFYEAR()`, `LAST_DAY()`, `MONTHNAME()`
    * Operators: Anti Left Outer Semi Join, Left Outer Semi Join

    User document

  - The elastic thread pool (enabled by default) becomes GA. This feature aims to improve CPU utilization.

    User document

16.9.1.2.5 Stability

- Enhance baseline capturing of execution plans

  Enhance the usability of baseline capturing of execution plans by adding a blocklist with such dimensions as table name, frequency, and user name. Introduce a new algorithm to optimize memory management for caching bindings. After baseline capturing is enabled, the system automatically creates bindings for most OLTP queries. Execution plans of bound statements are fixed, avoiding performance problems due to any change in the execution plans. Baseline capturing is applicable to scenarios such as major version upgrades and cluster migration, and helps reduce performance problems caused by regression of execution plans.

  User document, #32466

- Support TiKV quota limiter (experimental)

  If your machine deployed with TiKV has limited resources and the foreground is burdened by an excessively large amount of requests, background CPU resources are occupied by the foreground, causing TiKV performance unstable. In TiDB v6.0.0, you can use the quota-related configuration items to limit the resources used by the foreground, including CPU and read/write bandwidth. This greatly improves stability of clusters under long-term heavy workloads.

  User document, #12131

- Support the zstd compression algorithm in TiFlash

  TiFlash introduces two parameters, `profiles.default.dt_compression_method` and `profiles.default.dt_compression_level`, which allow users to select the optimal compression algorithm based on performance and capacity balance.

  User document

- Enable all I/O checks (Checksum) by default

  This feature was introduced in v5.4.0 as experimental. It enhances data accuracy and security without imposing an obvious impact on users' businesses.

  Warning: Newer version of data format cannot be downgraded in place to versions earlier than v5.4.0. During such a downgrade, you need to delete TiFlash replicas and replicate data after the downgrade. Alternatively, you can perform a downgrade by referring to dttool migrate.

  User document

- Improve thread utilization

  TiFlash introduces asynchronous gRPC and Min-TSO scheduling mechanisms. Such mechanisms ensure more efficient use of threads and avoid system crashes caused by excessive threads.

  User document

16.9.1.2.6 Data migration

TiDB Data Migration (DM)

- Add WebUI (experimental)

  With the WebUI, you can easily manage a large number of migration tasks. On the WebUI, you can:

  - View migration tasks on Dashboard
  - Manage migration tasks
  - Configure upstream settings
  - Query replication status
  - View master and worker information

  WebUI is still experimental and is still under development. Therefore, it is recommended only for trial. A known issue is that problems might occur if you use WebUI and dmctl to operate the same task. This issue will be resolved in later versions.

  User document

- Add an error handling mechanism

  More commands are introduced to address problems that interrupt a migration task. For example:

  - In case of a schema error, you can update the schema file by using the `--from-source/--from-target` parameter of the `binlog-schema update` command, instead of editing the schema file separately.
  - You can specify a binlog position to inject, replace, skip, or revert a DDL statement.

  User document

- Support full data storage to Amazon S3

  When DM performs all or full data migration tasks, sufficient hard disk space is required for storing full data from upstream. Compared with EBS, Amazon S3 has nearly infinite storage at lower costs. Now, DM supports configuring Amazon S3 as the dump directory. That means you can use S3 to store full data when you perform all or full data migration tasks.

  User document

- Support starting a migration task from specified time

  A new parameter `--start-time` is added to migration tasks. You can define time in the format of '2021-10-21 00:01:00' or '2021-10-21T00:01:00'.

  This feature is particularly useful in scenarios where you migrate and merge incremental data from shard mysql instances. Specifically, you do not need to set a binlog start

point for each source in an incremental migration task. Instead, you can create an incremental migration task quickly by using the `--start-time` parameter in `safe-mode`.

User document

TiDB Lightning

- Support configuring the maximum number of tolerable errors

  Added a configuration item `lightning.max-error`. The default value is 0. When the value is greater than 0, the max-error feature is enabled. If an error occurs in a row during encoding, a record containing this row is added to `lightning_task_info.type_error_v1` in the target TiDB and this row is ignored. When rows with errors exceed the threshold, TiDB Lightning exits immediately.

  Matching the `lightning.max-error` configuration, the `lightning.task-info-schema-name` configuration item records the name of the database that reports a data saving error.

  This feature does not cover all types of errors, for example, syntax errors are not applicable.

  User document

16.9.1.2.7 TiDB data share subscription

- Support replicating 100,000 tables simultaneously

  By optimizing the data processing flow, TiCDC reduces the resource consumption of processing incremental data for each table, which greatly improves the replication stability and efficiency when replicating data in large clusters. The result of an internal test shows that TiCDC can stably support replicating 100,000 tables simultaneously.

16.9.1.2.8 Deployment and maintenance

- Enable new collation rules by default

  Since v4.0, TiDB has supported new collation rules that behave the same way as MySQL in the case-insensitive, accent-insensitive, and padding rules. The new collation rules are controlled by the `new_collations_enabled_on_first_bootstrap` parameter, which was disabled by default. Since v6.0, TiDB enables the new collation rules by default. Note that this configuration takes effect only upon TiDB cluster initialization.

  User documentation

- Accelerate leader balancing after restarting TiKV nodes

  After a restart of TiKV nodes, the unevenly scattered leaders must be redistributed for load balance. In large-scale clusters, leader balancing time is positively correlated with the number of Regions. For example, the leader balancing of 100K Regions can take 20-30 minutes, which is prone to performance issues and stability risks due to uneven load. TiDB v6.0.0 provides a parameter to control the balancing concurrency and enlarges the default value to 4 times of the original, which greatly shortens the leader rebalancing time and accelerates the business recovery after a restart of the TiKV nodes.

  User documentation, #4610

- Support canceling the automatic update of statistics

  Statistics are one of the most important basic data that affect SQL performance. To ensure the completeness and timeliness of statistics, TiDB automatically updates object statistics periodically in the background. However, automatic statistics updates may result in resource contention, affecting SQL performance. To address this issue, you can manually cancel the automatic update of statistics since v6.0.

  User documentation

- PingCAP Clinic diagnostic service (Technical Preview version)

  PingCAP Clinic is a diagnostic service for TiDB clusters. This service helps troubleshoot cluster issues remotely and provides a quick check of cluster status locally. With PingCAP Clinic, you can ensure the stable operation of your TiDB cluster during its full life cycle, predict potential issues, reduce the probability of issues, and quickly troubleshoot cluster issues.

  When contacting PingCAP technical support for remote assistance to troubleshoot cluster issues, you can use the PingCAP Clinic service to collect and upload diagnostic data, thereby improving the troubleshooting efficiency.

  User documentation

- An enterprise-level database management platform, TiDB Enterprise Manager

  TiDB Enterprise Manager (TiEM) is an enterprise-level database management platform based on the TiDB database, which aims to help users manage TiDB clusters in on-premises or public cloud environments.

  TiEM not only provides full lifecycle visual management for TiDB clusters, but also provides one-stop services: parameter management, version upgrades, cluster clone, active-standby cluster switching, data import and export, data replication, and data backup and restore services. TiEM can improve the efficiency of DevOps on TiDB and reduce the DevOps cost for enterprises.

  Currently, TiEM is provided in the TiDB Enterprise edition only. To get TiEM, contact us via the TiDB Enterprise page.

- Support customizing configurations of the monitoring components

  When you deploy a TiDB cluster using TiUP, TiUP automatically deploys monitoring components such as Prometheus, Grafana, and Alertmanager, and automatically adds new nodes into the monitoring scope after scale-out. You can customize the configurations of the monitoring components by adding configuration items to the `topology.yaml` file.

  User document

16.9.1.3 Compatibility changes

> **Note:**
>
> When upgrading from an earlier TiDB version to v6.0.0, if you want to know the compatibility change notes of all intermediate versions, you can check the Release Notes of the corresponding version.

16.9.1.3.1 System variables

Variable name	Change type	Description
`placement_checks`	Deleted	Controls whether the DDL statement validates the placement rules specified by Placement Rules in SQL. Replaced by `tidb_placement_mode` .
`tidb_enable_alter_placement`	Deleted	Controls whether to enable placement rules in SQL.

Variable name	Change type	Description
`tidb_mem_quota_hashjoin` ↪ `tidb_mem_quota_indexlookupjoin` ↪ `tidb_mem_quota_indexlookupreader` ↪ `tidb_mem_quota_mergejoin` ↪ `tidb_mem_quota_sort` ↪ `tidb_mem_quota_topn` ↪	Deleted	Since v5.0, these variables are replaced by `tidb_mem_quota_query` ↪ and removed from the system variables document. To ensure compatibility, these variables were kept in source code. Since TiDB 6.0.0, these variables are removed

Variable name	Change type	Description
tidb_enable_mutation_checker ↪	Newly added	Controls whether to enable the mutation checker. The default value is `ON`. For existing clusters that upgrade from versions earlier than v6.0.0, the mutation checker is disabled by default.

Variable name	Change type	Description
tidb_ignore_prepared_cache_close_stmt ↪	Newly added	Controls whether to ignore the command that closes Prepared Statement. The default value is `OFF`.
tidb_mem_quota_binding_cache ↪	Newly added	Sets the memory usage threshold for the cache holding `binding` ↪ . The default value is `67108864` ↪ (64 MiB).

Variable name	Change type	Description
tidb_placement_mode ↪	Newly added	Controls whether DDL statements ignore the placement rules specified by Placement Rules in SQL. The default value is `strict` ↪ , which means that DDL statements do not ignore placement rules.

| tidb_rc_read_check_ts | Newly added |

Optimizes read statement latency within a transaction. If read/write conflicts are more severe, turning this variable on will add additional overhead and latency, causing regressions in performance. The default value is `off`.

This variable is not yet compatible with replica-read. If a read request has `tidb_rc_read_check_ts` on, it might not be able to use replica-read. Do not turn on both variables at the same time.

| | `tidb_sysdate_is_now` | Newly added | Controls whether the `SYSDATE` function can be replaced by the `NOW` function. This configuration item has the same effect as the MySQL option `sysdate-is-now`. The default value is `OFF`. | | `tidb_table_cache_lease` | Newly added | Controls the lease time of table cache, in seconds. The default value is `3` ↪ . | | `tidb_top_sql_max_meta_count` | Newly added | Controls the maximum number of SQL statement types collected by Top SQL per minute. The default value is `5000`. | | `tidb_top_sql_max_time_series_count` | Newly added | Controls how many SQL statements that contribute the most to the load (that is, top N) can be recorded by Top SQL per minute. The default value is `100`. | | `tidb_txn_assertion_level` | Newly added | Controls the assertion level. The assertion is a consistency check between data and indexes, which checks whether a key being written exists in the transaction commit process. By default, the check enables most of the check items, with almost no impact on performance. For existing clusters that upgrade from versions earlier than v6.0.0, the check is disabled by default. |

16.9.1.3.2 Configuration file parameters

Configuration file	Configuration	Change type	Description
Configuration file	Configuration	Change type	Description
TiDB	stmt ↪ - ↪ summary ↪ . ↪ enable ↪ stmt ↪ - ↪ summary ↪ . ↪ enable ↪ - ↪ internal ↪ - ↪ query ↪ stmt ↪ - ↪ summary ↪ . ↪ history ↪ - ↪ size ↪ stmt ↪ - ↪ summary ↪ . ↪ max ↪ - ↪ sql ↪ - ↪ length ↪ stmt ↪ - ↪ summary ↪ . ↪ max ↪ - ↪ stmt ↪ -4262 ↪ count ↪ stmt	Deleted	Configuration related to the statement summary tables. All these configuration items are removed. You need to use SQL variables to control the statement summary tables.

Configuration file	Configuration	Change type	Description
TiDB	`new_collations_enabled_on_first_bootstrap`	Modified	Controls whether to enable support for the new collation. Since v6.0, the default value is changed from `false` to `true`. This configuration item only takes effect when the cluster is initialized for the first time. After the first

Configuration file	Configuration item	Change type	Description
TiKV	backup ↪ . ↪ num ↪ - ↪ threads ↪	Modified	The value range is modified to [1, ↪ CPU ↪].
TiKV	raftstore ↪ . ↪ apply ↪ - ↪ max ↪ - ↪ batch ↪ - ↪ size ↪	Modified	The maximum value is changed to 10240 ↪ .

| TiKV | raftstore.raft-max-size-per-msg | Modified |

The minimum value is changed from 0 to larger than 0.

The maximum value is set to 3GB.

The unit is changed from MB to KB|MB|GB.

| | TiKV | raftstore.store-max-batch-size | Modified | The maximum value is set to 10240. | | TiKV | readpool.unified.max-thread-count | Modified | The adjustable range is changed to [min-thread-count, MAX(4, CPU)]. | | TiKV | rocksdb.enable- ↪ pipelined-write | Modified | The default value is changed from true to false. When this configuration is enabled, the previous Pipelined Write is used. When this configuration is disabled, the new Pipelined Commit mechanism is used. | | TiKV | rocksdb.max- ↪ background-flushes | Modified |

When the number of CPU cores is 10, the default value is 3.

When the number of CPU cores is 8, the default value is 2.

| | TiKV | rocksdb.max-background-jobs | Modified |

When the number of CPU cores is 10, the default value is 9.

When the number of CPU cores is 8, the default value is 7.

| | TiFlash | profiles.default.dt_enable_logical_split | Modified | Determines whether the segment of DeltaTree Storage Engine uses logical split. The default value is changed from true to false. | | TiFlash | profiles.default.enable_elastic_threadpool ↪ | Modified | Controls whether to enable the elastic thread pool. The default value is changed from false to true. | | TiFlash | storage.format_version | Modified | Controls the data validation feature of TiFlash. The default value is changed from 2 to 3.When format_version is set to 3, consistency check is performed on the read operations for all TiFlash data to avoid incorrect read due to hardware failure.Note that the new format version cannot be downgraded in place to versions earlier than v5.4. | | TiDB | pessimistic ↪ -txn.pessimistic-auto-commit | Newly added | Determines the transaction mode that the auto-commit transaction uses when the pessimistic transaction mode is globally enabled (tidb_txn_mode='pessimistic'). | | TiKV | pessimistic-txn.in-memory | Newly added | Controls whether to enable the in-memory pessimistic lock. With this feature enabled, pessimistic transactions store pessimistic locks in TiKV memory as much as possible, instead of writing pessimistic locks to disks or replicating to other replicas. This improves the performance of pessimistic transactions; however, there is a low probability that a pessimistic lock will be lost, which might cause the pessimistic transaction to fail to commit. The default value is true. | | TiKV | quota | Newly added | Add configuration items related to Quota Limiter, which limit the resources occupied by frontend requests. Quota Limiter is an experimental feature and is disabled by default. New quota-related configuration items are foreground-cpu-time, foreground-write-bandwidth, foreground-read-bandwidth ↪ , and max-delay-duration. | | TiFlash | profiles.default.dt_compression_method | Newly added | Specifies the compression algorithm for TiFlash. The optional values are LZ4, zstd and LZ4HC, all case insensitive. The default value is LZ4. | | TiFlash | profiles ↪ .default.dt_compression_level | Newly added | Specifies the compression level of TiFlash. The default value is 1. | | DM | loaders.<name>.import-mode | Newly added | The import mode during the full import phase. Since v6.0, DM uses TiDB Lightning's TiDB-backend mode to import data during the full import phase; the previous Loader component is no longer used. This is an internal replacement and has no obvious impact on daily operations.The default value is set to sql, which means using tidb-backend mode. In some rare cases, tidb-backend might not be fully compatible. You can fall back to Loader mode by configuring this parameter to loader. | | DM | loaders.<name>.on-duplicate | Newly added | Specifies the methods to resolve conflicts during the full import phase. The default value is replace, which means using the new data to replace the existing data. | | TiCDC | dial-timeout | Newly added | The timeout in establishing a connection with the downstream Kafka. The default value is 10s. | | TiCDC | read-timeout | Newly added | The timeout in getting a response returned by the downstream Kafka. The default value is 10s. | | TiCDC | write-timeout | Newly added | The timeout in sending a request to the downstream Kafka. The default value is 10s. |

16.9.1.3.3 Others

- The data placement policy has the following compatibility changes:

  - Binding is not supported. The direct placement option is removed from the syntax.
  - The `CREATE PLACEMENT POLICY` and `ALTER PLACEMENT POLICY` statements no longer support the `VOTERS` and `VOTER_CONSTRAINTS` placement options.
  - TiDB migration tools (TiDB Binlog, TiCDC, and BR) are now compatible with placement rules. The placement option is moved to a special comment in TiDB Binlog.
  - The `information_schema.placement_rules` system table is renamed to `information_schema.placement_policies`. This table now only displays information about placement policies.
  - The `placement_checks` system variable is replaced by `tidb_placement_mode`.
  - It is prohibited to add partitions with placement rules to tables that have TiFlash replicas.
  - Remove the `TIDB_DIRECT_PLACEMENT` column from the `INFORMATION_SCHEMA` table.

- The `status` value of SQL plan management (SPM) binding is modified:
  - Remove `using`.
  - Add `enabled` (available) to replace `using`.
  - Add `disabled` (unavailable).

- DM modifies the OpenAPI interface
  - Because of internal mechanism changes, the interface related to task management cannot be compatible with the previous experimental version. You need to refer to the new DM OpenAPI documentation for adaptation.

- DM changes the methods to resolve conflicts during the full import phase
  - A `loader.<name>.on-duplicate` parameter is added. The default value is `replace`, which means using the new data to replace the existing data. If you want to keep the previous behavior, you can set the value to `error`. This parameter only controls the behavior during the full import phase.

- To use DM, you should use the corresponding version of `dmctl`
  - Due to internal mechanism changes, after upgrading DM to v6.0.0, you should also upgrade `dmctl` to v6.0.0.

- In v5.4 (v5.4 only), TiDB allows incorrect values for some noop system variables. Since v6.0.0, TiDB disallows setting incorrect values for system variables. #31538

16.9.1.4 Improvements

- TiDB
  - Clear the placement rule settings of a table automatically after restoring the table using the `FLASHBACK` or `RECOVER` statement #31668

  - Add a performance overview dashboard to show core performance metrics on typical critical paths, making metrics analysis on TiDB easier #31676
  - Support using the `REPLACE` keyword in the `LOAD DATA LOCAL INFILE` statement #24515
  - Support partition pruning for the built-in `IN` expression in Range partition tables #26739
  - Improve query efficiency by eliminating potentially redundant Exchange operations in MPP aggregation queries #31762
  - Improve compatibility with MySQL by allowing duplicate partition names in the `TRUNCATE PARTITION` and `DROP PARTITION` statements #31681
  - Support showing the `CREATE_TIME` information in the results of the `ADMIN SHOW DDL JOBS` statement #23494
  - Support a new built-in function `CHARSET()` #3931
  - Support filtering a baseline capturing blocklist by usernames #32558
  - Support using wildcards in a baseline capturing blocklist #32714
  - Optimize the results of the `ADMIN SHOW DDL JOBS` and `SHOW TABLE STATUS` statements by displaying the time according to the current `time_zone` #26642
  - Support pushing down the `DAYNAME()` and `MONTHNAME()` functions to TiFlash #32594
  - Support pushing down the `REGEXP` function to TiFlash #32637
  - Support pushing down the `DAYOFMONTH()` and `LAST_DAY()` functions to TiFlash #33012
  - Support pushing down the `DAYOFWEEK()` and `DAYOFYEAR()` functions to TiFlash #33130
  - Support pushing down the `IS_TRUE`, `IS_FALSE`, and `IS_TRUE_WITH_NULL` functions to TiFlash #33047
  - Support pushing down the `GREATEST` and `LEAST` functions to TiFlash #32787
  - Support tracking the execution of the `UnionScan` operator #32631
  - Support using the PointGet plan for queries that read the `_tidb_rowid` column #31543
  - Support showing the original partition name in the output of the `EXPLAIN` statement without converting the name to lowercase #32719
  - Enable partition pruning for RANGE COLUMNS partitionings on IN conditions and string type columns #32626
  - Return an error message when a system variable is set to NULL #32850
  - Remove Broadcast Join from the non-MPP mode #31465
  - Support executing MPP plans on partitioned tables in dynamic pruning mode #32347
  - Support pushing down predicates for common table expressions (CTEs) #28163
  - Simplify the configurations of `Statement Summary` and `Capture Plan Baselines` to be available on a global basis only #30557
  - Update gopsutil to v3.21.12 to address alarms reported when building binary on macOS 12 #31607

- TiKV

  - Improve the sampling accuracy of the Raftstore for batches with many key ranges #12327
  - Add the correct "Content-Type" for `debug/pprof/profile` to make the Profile more easily identified #11521
  - Renew the lease time of the leader infinitely when the Raftstore has heartbeats or handles read requests, which helps reduce latency jitter #11579
  - Choose the store with the least cost when switching the leader, which helps improve performance stability #10602
  - Fetch Raft logs asynchronously to reduce the performance jitter caused by blocking the Raftstore #11320
  - Support the `QUARTER` function in vector calculation #5751
  - Support pushing down the `BIT` data type to TiKV #30738
  - Support pushing down the `MOD` function and the `SYSDATE` function to TiKV #11916
  - Reduce the TiCDC recovery time by reducing the number of the Regions that require the Resolve Locks step #11993
  - Support dynamically modifying `raftstore.raft-max-inflight-msgs` #11865
  - Support `EXTRA_PHYSICAL_TABLE_ID_COL_ID` to enable dynamic pruning mode #11888
  - Support calculation in buckets #11759
  - Encode the keys of RawKV API V2 as `user-key` + `memcomparable-padding` + `timestamp` #11965
  - Encode the values of RawKV API V2 as `user-value` + `ttl` + `ValueMeta` and encode `delete` in `ValueMeta` #11965
  - Support dynamically modifying `raftstore.raft-max-size-per-msg` #12017
  - Support monitoring multi-k8s in Grafana #12014
  - Transfer the leadership to CDC observer to reduce latency jitter #12111
  - Support dynamically modifying `raftstore.apply_max_batch_size` and `raftstore.store_max_batch_size` #11982
  - RawKV V2 returns the latest version upon receiving the `raw_get` or `raw_scan` request #11965
  - Support the RCCheckTS consistency reads #12097
  - Support dynamically modifying `storage.scheduler-worker-pool-size`(the thread count of the Scheduler pool) #12067
  - Control the use of CPU and bandwidth by using the global foreground flow controller to improve the performance stability of TiKV #11855
  - Support dynamically modifying `readpool.unified.max-thread-count` (the thread count of the UnifyReadPool) #11781
  - Use the TiKV internal pipeline to replace the RocksDB pipeline and deprecate the `rocksdb.enable-multibatch-write` parameter #12059

- PD

  - Support automatically selecting the fastest object for transfer when evicting the leader, which helps speed up the eviction process #4229

  - Forbid deleting a voter from a 2-replica Raft group in case the Region becomes unavailable #4564
  - Speed up the scheduling of the balance leader #4652

- TiFlash

  - Forbid the logical splitting of TiFlash files (by adjusting the default value of `profiles.default.dt_enable_logical_split` to `false`. See user document for details) and improve the space usage efficiency of the TiFlash columnar storage so that the space occupation of a table synchronized to TiFlash is similar to the space occupation of the table in TiKV
  - Optimize the cluster management and replica replication mechanism for TiFlash by integrating the previous cluster management module into TiDB, which accelerates replica creation for small tables #29924

- Tools

  - Backup & Restore (BR)

    * Improve the speed of restoring the backup data. In the simulation test when BR restores 16 TB data to a TiKV cluster with 15 nodes (each node has 16 CPU cores), the throughput reaches 2.66 GiB/s. #27036
    * Support importing and exporting placement rules. Add a `--with-tidb-placement-mode` parameter to control whether to ignore the placement rules when importing data. #32290

  - TiCDC

    * Add a `Lag analyze` panel in Grafana #4891
    * Support placement rules #4846
    * Synchronize HTTP API handling #1710
    * Add the exponential backoff mechanism for restarting a changefeed #3329
    * Set the default isolation level of MySQL sink to read-committed to reduce deadlocks in MySQL #3589
    * Validate changefeed parameters upon creation and refine error messages #1716 #1718 #1719 #4472
    * Expose configuration parameters of the Kafka producer to make them configurable in TiCDC #4385

  - TiDB Data Migration (DM)

    * Support starting a task when upstream table schemas are inconsistent and in optimistic mode #3629 #3708 #3786
    * Support creating a task in the `stopped` state #4484
    * Support Syncer using the working directory of the DM-worker rather than `/tmp` to write internal files, and cleaning the directory after the task is stopped #4107
    * Precheck has improved. Some important checks are no longer skipped. #3608

- TiDB Lightning
  * Add more retryable error types #31376
  * Support the base64 format password string #31194
  * Standardize error codes and error outputs #32239

16.9.1.5 Bug fixes

- TiDB
  - Fix a bug that TiDB fails to create tables with placement rules when `SCHEDULE = majority_in_primary`, and `PrimaryRegion` and `Regions` are of the same value #31271
  - Fix the `invalid transaction` error when executing a query using index lookup join #30468
  - Fix a bug that `show grants` returns incorrect results when two or more privileges are granted #30855
  - Fix a bug that `INSERT INTO t1 SET timestamp_col = DEFAULT` would set the timestamp to the zero timestamp for the field defaulted to `CURRENT_TIMESTAMP` #29926
  - Fix errors reported in reading the results by avoiding encoding the maximum value and minimum non-null value of the string type #31721
  - Fix load data panic if the data is broken at an escape character #31589
  - Fix the issue that the `greatest` or `least` function with collation gets a wrong result #31789
  - Fix a bug that the date_add and date_sub functions might return incorrect data types #31809
  - Fix possible panic when inserting data to virtually generated columns using an insert statement #31735
  - Fix a bug that no error is reported when duplicate columns are present in the created list partition #31784
  - Fix wrong results returned when `select for update union select` uses incorrect snapshots #31530
  - Fix the potential issue that Regions might be unevenly distributed after a restore operation is finished #31034
  - Fix a bug that COERCIBILITY is wrong for the `json` type #31541
  - Fix wrong collation of the `json` type when this type is processed using builtin-func #31320
  - Fix a bug that PD rules are not deleted when the count of TiFlash replicas is set to 0 #32190
  - Fix the issue that `alter column set default` wrongly updates the table schema #31074
  - Fix the issue that `date_format` in TiDB handles `'\n'` in a MySQL-incompatible way #32232

- Fix a bug that errors may occur when updating partitioned tables using join #31629
- Fix wrong range calculation results for Nulleq function on Enum values #32428
- Fix possible panic in `upper()` and `lower()` functions #32488
- Fix time zone problems encountered when changing the other type columns to timestamp type columns #29585
- Fix TiDB OOM when exporting data using ChunkRPC #31981 #30880
- Fix a bug that sub SELECT LIMIT does not work as expected in dynamic partition pruning mode #32516
- Fix wrong or inconsistent format of bit default value in the `INFORMATION_SCHEMA` ↪ `.COLUMNS` table #32655
- Fix a bug that partition table pruning might not work for listing partition tables after server restart #32416
- Fix a bug that `add column` might use a wrong default timestamp after `SET` ↪ `timestamp` is executed #31968
- Fix a bug that connecting to a TiDB passwordless account from MySQL 5.5 or 5.6 client may fail #32334
- Fix wrong results when reading partitioned tables in dynamic mode in transactions #29851
- Fix a bug that TiDB may dispatch duplicate tasks to TiFlash #32814
- Fix wrong results returned when the input of the `timdiff` function contains a millisecond #31680
- Fix wrong results when explicitly reading partitions and using the IndexJoin plan #32007
- Fix a bug that renaming a column fails when changing its column type concurrently #31075
- Fix a bug that the formula for calculating net cost for TiFlash plans is not aligned with TiKV plans #30103
- Fix a bug that `KILL TIDB` cannot take effect immediately on idle connections #24031
- Fix possible wrong results when querying a table with generated columns #33038
- Fix wrong results of deleting data of multiple tables using `left join` #31321
- Fix a bug that the `SUBTIME` function returns a wrong result in case of overflow #31868
- Fix a bug that the `selection` operator cannot be pushed down when an aggregation query contains the `having` condition #33166
- Fix a bug that CTE might be blocked when a query reports errors #31302
- Fix a bug that excessive length of varbinary or varchar columns when creating tables in non-strict mode might result in errors #30328
- Fix the wrong number of followers in `information_schema.placement_policies` when no follower is specified #31702
- Fix the issue that TiDB allows to specify column prefix length as 0 when an index is created #31972
- Fix the issue that TiDB allows partition names ending with spaces #31535
- Correct the error message of the `RENAME TABLE` statement #29893

- TiKV
  - Fix the panic issue caused by deleting snapshot files when the peer status is `Applying` #11746
  - Fix the issue of QPS drop when flow control is enabled and `level0_slowdown_trigger` is set explicitly #11424
  - Fix the issue that destroying a peer might cause high latency #10210
  - Fix a bug that TiKV cannot delete a range of data (which means the internal command `unsafe_destroy_range` is executed) when the GC worker is busy #11903
  - Fix a bug that TiKV panics when the data in `StoreMeta` is accidentally deleted in some corner cases #11852
  - Fix a bug that TiKV panics when performing profiling on an ARM platform #10658
  - Fix a bug that TiKV might panic if it has been running for 2 years or more #11940
  - Fix the compilation issue on the ARM64 architecture caused by missing SSE instruction set #12034
  - Fix the issue that deleting an uninitialized replica might cause an old replica to be recreated #10533
  - Fix a bug that stale messages cause TiKV to panic #12023
  - Fix the issue that undefined behavior (UB) might occur in TsSet conversions #12070
  - Fix a bug that replica reads might violate the linearizability #12109
  - Fix the potential panic issue that occurs when TiKV performs profiling on Ubuntu 18.04 #9765
  - Fix the issue that tikv-ctl returns an incorrect result due to its wrong string match #12329
  - Fix the issue of intermittent packet loss and out of memory (OOM) caused by the overflow of memory metrics #12160
  - Fix the potential issue of mistakenly reporting TiKV panics when exiting TiKV #12231
- PD
  - Fix the issue that PD generates the operator with meaningless steps of Joint Consensus #4362
  - Fix a bug that the TSO revoking process might get stuck when closing the PD client #4549
  - Fix the issue that the Region scatterer scheduling lost some peers #4565
  - Fix the issue that `Duration` fields of `dr-autosync` cannot be dynamically configured #4651
- TiFlash
  - Fix the TiFlash panic issue that occurs when the memory limit is enabled #3902

  - Fix the issue that expired data is recycled slowly #4146
  - Fix the potential issue of TiFlash panic when `Snapshot` is applied simultaneously with multiple DDL operations #4072
  - Fix the potential query error after adding columns under heavy read workload #3967
  - Fix the issue that the `SQRT` function with a negative argument returns `NaN` instead of `Null` #3598
  - Fix the issue that casting `INT` to `DECIMAL` might cause overflow #3920
  - Fix the issue that the result of `IN` is incorrect in multi-value expressions #4016
  - Fix the issue that the date format identifies `'\n'` as an invalid separator #4036
  - Fix the issue that the learner-read process takes too much time under high concurrency scenarios #3555
  - Fix the wrong result that occurs when casting `DATETIME` to `DECIMAL` #4151
  - Fix the issue of memory leak that occurs when a query is canceled #4098
  - Fix a bug that enabling the elastic thread pool might cause a memory leak #4098
  - Fix a bug that canceled MPP queries might cause tasks to hang forever when the local tunnel is enabled #4229
  - Fix a bug that the failure of the HashJoin build side might cause MPP queries to hang forever #4195
  - Fix a bug that MPP tasks might leak threads forever #4238

- Tools

  - Backup & Restore (BR)

    * Fix a bug that BR gets stuck when the restore operation meets some unrecoverable errors #33200
    * Fix a bug that causes the restore operation to fail when the encryption information is lost during backup retry #32423

  - TiCDC

    * Fix a bug that MySQL sink generates duplicated `replace` SQL statements when `batch-replace-enable` is disabled #4501
    * Fix a bug that a TiCDC node exits abnormally when a PD leader is killed #4248
    * Fix the error `Unknown system variable 'transaction_isolation'` for some MySQL versions #4504
    * Fix the TiCDC panic issue that might occur when `Canal-JSON` incorrectly handles `string` #4635
    * Fix a bug that sequence is incorrectly replicated in some cases #4563
    * Fix the TiCDC panic issue that might occur because `Canal-JSON` does not support nil #4736
    * Fix the wrong data mapping for avro codec of type `Enum/Set` and `TinyText` ↪ `/MediumText/Text/LongText` #4454
    * Fix a bug that Avro converts a `NOT NULL` column to a nullable field #4818
    * Fix an issue that TiCDC cannot exit #4699

- TiDB Data Migration (DM)
  * Fix the issue that syncer metrics are updated only when querying the status #4281
  * Fix the issue that execution errors of the update statement in safemode may cause the DM-worker panic #4317
  * Fix a bug that long varchars report an error `Column length too big` #4637
  * Fix the conflict issue caused by multiple DM-workers writing data from the same upstream #3737
  * Fix the issue that hundreds of "checkpoint has no change, skip sync flush checkpoint" print in the log and the replication is very slow #4619
  * Fix the DML loss issue when merging shards and replicating incremental data from upstream in the pessimistic mode #5002
- TiDB Lightning
  * Fix a bug that TiDB Lightning may not delete the metadata schema when some import tasks do not contain source files #28144
  * Fix the panic that occurs when the table names in the source file and in the target cluster are different #31771
  * Fix the checksum error "GC life time is shorter than transaction duration" #32733
  * Fix the issue that TiDB Lightning gets stuck when it fails to check empty tables #31797
- Dumpling
  * Fix the issue that the displayed progress is not accurate when running `dumpling --sql $query` #30532
  * Fix the issue that Amazon S3 cannot correctly calculate the size of compressed data #30534
- TiDB Binlog
  * Fix the issue that TiDB Binlog might be skipped when large upstream write transactions are replicated to Kafka #1136

16.10 v5.4

16.10.1 TiDB 5.4.3 Release Notes

Release date: October 13, 2022

TiDB version: 5.4.3

16.10.1.1 Improvements

- TiKV

  - Support configuring the RocksDB write stall settings to a value smaller than the flow control threshold #13467
  - Support configuring the `unreachable_backoff` item to avoid Raftstore broadcasting too many messages after one peer becomes unreachable #13054

- Tools

  - TiDB Lightning

    * Optimize Scatter Region to batch mode to improve the stability of the Scatter Region process #33618

  - TiCDC

    * Reduce performance overhead caused by runtime context switching in multi-Region scenarios #5610

16.10.1.2 Bug fixes

- TiDB

  - Fix the incorrect output of `SHOW CREATE PLACEMENT POLICY` #37526
  - Fix the issue that some DDL statements might be stuck for a period after the PD node of a cluster is replaced #33908
  - Fix the issue that `KILL TIDB` cannot take effect immediately on idle connections #24031
  - Fix the issue that incorrect results are returned in the `DATA_TYPE` and `COLUMN_TYPE` columns when querying the `INFORMSTION_SCHEMA.COLUMNS` system table #36496
  - Fix the issue that when TiDB Binlog is enabled, executing the `ALTER SEQUENCE` ↪ statement might cause a wrong metadata version and cause Drainer to exit #36276
  - Fix the issue that the `UNION` operator might return unexpected empty result #36903
  - Fix the wrong result that occurs when enabling dynamic mode in partitioned tables for TiFlash #37254
  - Fix the issue that `INL_HASH_JOIN` might hang when used with `LIMIT` #35638
  - Fix the issue that TiDB might return the `invalid memory address or nil` ↪ `pointer dereference` error when executing the `SHOW WARNINGS` statement #31569
  - Fix the `invalid transaction` error that occurs when performing Stale Read in the RC isolation level #30872
  - Fix the issue that the `EXPLAIN ANALYZE` statement with DML executors might return result before the transaction commit finishes #37373
  - Fix the issue of the `data and columnID count not match` error that occurs when inserting duplicated values with TiDB Binlog enabled #33608

  - Fix the issue that in the static partition prune mode, SQL statements with an aggregate condition might return wrong result when the table is empty #35295
  - Fix the issue that TiDB might panic when executing the `UPDATE` statement #32311
  - Fix the issue of wrong query result because the `UnionScan` operator cannot maintain the order #33175
  - Fix the issue that the UPDATE statements incorrectly eliminate the projection in some cases, which causes the `Can't find column` error #37568
  - Fix the issue that partitioned tables cannot fully use indexes to scan data in some cases #33966
  - Fix the issue that the `EXECUTE` might throw an unexpected error in specific scenarios #37187
  - Fix the issue that TiDB might return wrong results when using a `BIT` type index with prepared plan cache enabled #33067

- TiKV

  - Fix the issue of continuous SQL execution errors in the cluster after the PD leader is switched or PD is restarted #12934
    * Cause: This issue is caused by a TiKV bug that TiKV does not retry sending heartbeat information to PD client after heartbeat requests fail, until TiKV reconnects to PD client. As a result, the Region information on the failed TiKV node becomes outdated, and TiDB cannot get the latest Region information, which causes SQL execution errors.
    * Affected versions: v5.3.2 and v5.4.2. This issue has been fixed in v5.3.3 and v5.4.3. If you are using v5.4.2, you can upgrade your cluster to v5.4.3.
    * Workaround: In addition to upgrade, you can also restart the TiKV nodes that cannot send Region heartbeat to PD, until there is no Region heartbeat to send.
  - Fix the issue that causes permission denied error when TiKV gets an error from the web identity provider and fails back to the default provider #13122
  - Fix the issue that the PD client might cause deadlocks #13191
  - Fix the issue that Regions might be overlapped if Raftstore is busy #13160

- PD

  - Fix the issue that PD cannot correctly handle dashboard proxy requests #5321
  - Fix the issue that a removed tombstone store appears again after the PD leader transfer #4941
  - Fix the issue that the TiFlash learner replica might not be created #5401

- TiFlash

  - Fix the issue that the `format` function might return a `Data truncated` error #4891

  - Fix the issue that TiFlash might crash due to an error in parallel aggregation #5356
  - Fix the panic that occurs after creating the primary index with a column containing the `NULL` value #5859

- Tools

  - TiDB Lightning

    * Fix the issue that an auto-increment column of the `BIGINT` type might be out of range #27397
    * Fix the issue that de-duplication might cause TiDB Lightning to panic in extreme cases #34163
    * Fix the issue that TiDB Lightning does not support columns starting with slash, number, or non-ascii characters in Parquet files #36980
    * Fix the issue that TiDB Lightning fails to connect to TiDB when TiDB uses an IPv6 host #35880

  - TiDB Data Migration (DM)

    * Fix the issue that DM Worker might get stuck when getting DB Conn #3733
    * Fix the issue that DM reports the `Specified key was too long` error #5315
    * Fix the issue that latin1 data might be corrupted during replication #7028
    * Fix the issue that DM fails to start when TiDB uses an IPv6 host #6249
    * Fix the issue of possible data race in `query-status` #4811
    * Fix goroutine leak when relay meets an error #6193

  - TiCDC

    * Fix the TiCDC panic issue when you set `enable-old-value = false` #6198

  - Backup & Restore (BR)

    * Fix the issue that might lead to backup and restoration failure if special characters exist in the authorization key of external storage #37469
    * Fix the issue that the regions are not balanced because the concurrency is set too large during the restoration #37549

  - Dumpling

    * Fix the issue that GetDSN does not support IPv6 #36112

16.10.2 TiDB 5.4.2 Release Notes

Release Date: July 8, 2022

TiDB version: 5.4.2

Warning:

It is not recommended to use v5.4.2, because this version has a known bug. For details, see #12934. This bug has been fixed in v5.4.3. It is recommended to use v5.4.3.

16.10.2.1 Improvements

- TiDB
  - Avoid sending requests to unhealthy TiKV nodes to improve availability #34906
- TiKV
  - Reload TLS certificate automatically for each update to improve availability #12546
  - Improve the health check to detect unavailable Raftstore, so that the TiKV client can update Region Cache in time #12398
  - Transfer the leadership to CDC observer to reduce latency jitter #12111
- PD
  - Disable compiling swagger server by default #4932
- Tools
  - TiDB Lightning
    * Optimize Scatter Region to batch mode to improve the stability of the Scatter Region process #33618

16.10.2.2 Bug Fixes

- TiDB
  - Fix the issue of wrong TableDual plans cached in binary protocol #34690 #34678
  - Fix the issue of incorrectly inferred null flag of the TiFlash `firstrow` aggregate function in the EqualAll case #34584
  - Fix the issue that the planner generates wrong 2-phase aggregate plan for TiFlash #34682
  - Fix the planner wrong behaviors that occur when `tidb_opt_agg_push_down` and `tidb_enforce_mpp` are enabled #34465

  - Fix the wrong memory-usage value used when Plan Cache is evicted #34613
  - Fix the issue that the column list does not work in the `LOAD DATA` statement #35198
  - Avoid reporting `WriteConflict` errors in pessimistic transactions #11612
  - Fix the issue that the prewrite requests are not idempotency when Region errors and network issues occur #34875
  - Fix the issue that the async commit transactions being rolled back might not meet atomicity #33641
  - Previously, when a network connectivity issue occurred, TiDB did not always correctly free the resources held by the disconnected session. This issue has been fixed so that open transactions can be rolled back and other associated resources can be released. #34722
  - Fix the issue that the `references invalid table` error might be incorrectly reported when TiDB queries views with CTE #33965
  - Fix the panic issue caused by the `fatal error: concurrent map read and map write` error #35340

- TiKV

  - Fix the panic issue caused by analyzing statistics when `max_sample_size` is set to `0` #11192
  - Fix the potential issue of mistakenly reporting TiKV panics when exiting TiKV #12231
  - Fix the panic issue that might occur when the source peer catches up logs by snapshot in the Region merge process #12663
  - Fix the panic issue that might occur when a peer is being split and destroyed at the same time #12825
  - Fix the issue of frequent PD client reconnection that occurs when the PD client meets an error #12345
  - Fix the issue of time parsing error that occurs when the `DATETIME` values contain a fraction and `Z` #12739
  - Fix the issue that TiKV panics when performing type conversion for an empty string #12673
  - Fix the possible duplicate commit records in pessimistic transactions when async commit is enabled #12615
  - Fix the issue that TiKV reports the `invalid store ID 0` error when using Follower Read #12478
  - Fix the issue of TiKV panic caused by the race between destroying peers and batch splitting Regions #12368
  - Fix the issue that tikv-ctl returns an incorrect result due to its wrong string match #12329
  - Fix the issue of failing to start TiKV on AUFS #12543

- PD

  - Fix the wrong status code of `not leader` #4797

  - Fix the PD panic that occurs when a hot region has no leader #5005
  - Fix the issue that scheduling cannot start immediately after the PD leader transfer #4769
  - Fix a bug of TSO fallback in some corner cases #4884

- TiFlash

  - Fix the issue that TiFlash crashes after dropping a column of a table with clustered indexes in some situations #5154
  - Fix potential data inconsistency after a lot of INSERT and DELETE operations #4956
  - Fix wrong decimal comparison results in corner cases #4512

- Tools

  - Backup & Restore (BR)
    * Fix a bug that BR reports `ErrRestoreTableIDMismatch` in RawKV mode #35279
    * Fix a bug that BR does not retry when an error occurs in saving files #34865
    * Fix a panic issue when BR is running #34956
    * Fix the issue that BR cannot handle S3 internal errors #34350
    * Fix a bug that BR gets stuck when the restore operation meets some unrecoverable errors #33200
  - TiCDC
    * Fix data loss that occurs in special incremental scanning scenarios #5468
    * Fix a bug that the redo log manager flushes logs before writing logs #5486
    * Fix a bug that the resolved ts moves too fast when some tables are not maintained by the redo writer #5486
    * Fix the issue that file name conflicts may cause data loss #5486
    * Fix replication interruption that occurs when Region leader is missing and the retry exceeds the limit #5230
    * Fix the bug that MySQL Sink may save a wrong checkpointTs #5107
    * Fix a bug that may cause goroutine leak in the HTTP server #5303
    * Fix the issue that changes in meta Region can lead to latency increase #4756 #4762
  - TiDB Data Migration (DM)
    * Fix the issue that DM occupies more disk space after a task automatically resumes #5344
    * Fix the issue that the uppercase table cannot be replicated when `case-sensitive: true` is not set #5255

16.10.3 TiDB 5.4.1 Release Notes

Release Date: May 13, 2022

TiDB version: 5.4.1

16.10.3.1 Compatibility changes

TiDB v5.4.1 does not introduce any compatibility changes in product design. But note that bug fixes in this release might result in compatibility changes, too. For more information, see Bug Fixes.

16.10.3.2 Improvements

- TiDB
  - Support using the PointGet plan for queries that read the `_tidb_rowid` column #31543
  - Add more logs and metrics for the `Apply` operator to show whether it is parallel #33887
  - Improve the `TopN` pruning logic for Analyze Version 2 used for collecting statistics #34256
  - Support displaying multiple Kubernetes clusters in the Grafana dashboard #32593
- TiKV
  - Support displaying multiple Kubernetes clusters in the Grafana dashboard #12104
- PD
  - Support displaying multiple Kubernetes clusters in the Grafana dashboard #4673
- TiFlash
  - Support displaying multiple Kubernetes clusters in the Grafana dashboard #4129
- Tools
  - TiCDC
    * Support multiple Kubernetes clusters in Grafana dashboards #4665
    * Expose configuration parameters of the Kafka producer to make them configurable in TiCDC #4385
  - TiDB Data Migration (DM)
    * Support Syncer using the working directory of the DM-worker rather than `/tmp` to write internal files, and cleaning the directory after the task is stopped #4107

16.10.3.3 Bug Fixes

- TiDB
  - Fix the issue that `date_format` in TiDB handles `'\n'` in a MySQL-incompatible way #32232
  - Fix the issue that TiDB writes wrong data due to the wrong encoding of the `ENUM` or `SET` column #32302
  - Fix the issue that the Merge Join operator gets wrong results in certain cases #33042
  - Fix the issue that TiDB gets a wrong result when a correlated subquery returns a constant #32089
  - Fix the issue that TiDB gets the wrong result when using TiFlash to scan tables with empty range although TiFlash does not support reading tables with empty range yet #33083
  - Fix the issue that the `MAX` or `MIN` function on the `ENUM` or `SET` column returns a wrong result when the new collation is enabled in TiDB #31638
  - Fix a bug that CTE might be blocked when a query reports errors #31302
  - Fix wrong range calculation results for Nulleq function on Enum values #32428
  - Fix TiDB OOM when exporting data using ChunkRPC #31981 #30880
  - Fix a bug that `tidb_super_read_only` is not automatically enabled when `tidb_restricted_read_only` is enabled #31745
  - Fix the issue that the `greatest` or `least` function with collation gets a wrong result #31789
  - Fix load data panic if the data is broken at an escape character #31589
  - Fix the `invalid transaction` error when executing a query using index lookup join #30468
  - Fix wrong results of deleting data of multiple tables using `left join` #31321
  - Fix a bug that TiDB may dispatch duplicate tasks to TiFlash #32814
  - Fix the issue that granting the `all` privilege might fail in clusters that are upgraded from v4.0 #33588
  - Fix the session panic that occurs when executing the prepared statement after table schema change with the MySQL binary protocol #33509
  - Fix the issue that executing SQL statements that have the `compress()` expression with `tidb_enable_vectorized_expression` enabled will fail #33397
  - Fix the issue of high CPU usage by the `reArrangeFallback` function #30353
  - Fix the issue that the table attributes are not indexed when a new partition is added and the issue that the table range information is not updated when the partition changes #33929
  - Fix a bug that the `TopN` statistical information of a table during the initialization is not correctly sorted #34216
  - Fix the error that occurs when reading from the `INFORMATION_SCHEMA.` ↪ `ATTRIBUTES` table by skipping the unidentifiable table attributes #33665
  - Fix a bug that even if `@@tidb_enable_parallel_apply` is set, the `Apply` operator is not paralleled when an `order` property exists #34237

  - Fix a bug that `'0000-00-00 00:00:00'` can be inserted into a `datetime` column when `sql_mode` is set to `NO_ZERO_DATE` #34099
  - Fix the issue that the TiDB server might run out of memory when the `INFORMATION_SCHEMA.CLUSTER_SLOW_QUERY` table is queried. This issue can be triggered when you check slow queries on the Grafana dashboard #33893
  - Fix a bug that in the `NOWAIT` statement, a transaction being executed does not return immediately when encountering a lock #32754
  - Fix a bug that causes a failure when creating a table with the `GBK` charset and `gbk_bin` collation #31308
  - Fix a bug that when `enable-new-charset` is `on`, creating a `GBK` charset table with collation fails with the "Unknown character set" error #31297

- TiKV

  - Fix the issue that TiKV panics and destroys peers unexpectedly because the target Region to be merged is invalid #12232
  - Fix a bug that stale messages cause TiKV to panic #12023
  - Fix the issue of intermittent packet loss and out of memory (OOM) caused by the overflow of memory metrics #12160
  - Fix the potential panic issue that occurs when TiKV performs profiling on Ubuntu 18.04 #9765
  - Fix a bug that replica reads might violate the linearizability #12109
  - Fix the TiKV panic issue that occurs when the target peer is replaced with the peer that is destroyed without being initialized when merging a Region #12048
  - Fix a bug that TiKV might panic if it has been running for 2 years or more #11940
  - Reduce the TiCDC recovery time by reducing the number of the Regions that require the Resolve Locks step #11993
  - Fix the panic issue caused by deleting snapshot files when the peer status is `Applying` #11746
  - Fix the issue that destroying a peer might cause high latency #10210
  - Fix the panic issue caused by invalid assertion in resource metering #12234
  - Fix the issue that slow score calculation is inaccurate in some corner cases #12254
  - Fix the OOM issue caused by the `resolved_ts` module and add more metrics #12159
  - Fix the issue that successfully committed optimistic transactions may report the `Write Conflict` error when the network is poor #34066
  - Fix the TiKV panic issue that occurs when replica read is enabled on a poor network #12046

- PD

  - Fix the issue that `Duration` fields of `dr-autosync` cannot be dynamically configured #4651

  - Fix the issue that when there exists a Store with large capacity (2T for example), fully allocated small Stores cannot be detected, which results in no balance operator being generated #4805
  - Fix the issue that the label distribution has residual labels in the metrics #4825

- TiFlash

  - Fix the panic issue that occurs when TLS is enabled #4196
  - Fix possible metadata corruption caused by Region merge on a lagging Region peer #4437
  - Fix the issue that a query containing `JOIN` might be hung if an error occurs #4195
  - Fix a bug that MPP tasks might leak threads forever #4238
  - Fix the overflow that occurs when casting `FLOAT` to `DECIMAL` #3998
  - Fix the issue that expired data is recycled slowly #4146
  - Fix a bug that canceled MPP queries might cause tasks to hang forever when the local tunnel is enabled #4229
  - Fix the issue of memory leak that occurs when a query is canceled #4098
  - Fix the wrong result that occurs when casting `DATETIME` to `DECIMAL` #4151
  - Fix the potential issue of TiFlash panic when `Snapshot` is applied simultaneously with multiple DDL operations #4072
  - Fix the bug that invalid storage directory configurations lead to unexpected behaviors #4093
  - Fix the bug that some exceptions are not handled properly #4101
  - Fix the issue that casting `INT` to `DECIMAL` might cause overflow #3920
  - Fix the issue that the result of `IN` is incorrect in multi-value expressions #4016
  - Fix the issue that the date format identifies `'\n'` as an invalid separator #4036
  - Fix the potential query error after adding columns under heavy read workload #3967
  - Fix the panic issue that occurs when the memory limit is enabled #3902
  - Fix potential data corruption in DTFiles #4778
  - Fix potential errors when querying on a table with many delete operations #4747
  - Fix a bug that TiFlash reports many “Keepalive watchdog fired” errors randomly #4192
  - Fix a bug that data not matching any region range remains on a TiFlash node #4414
  - Fix a bug that empty segments cannot be merged after GC #4511

- Tools

  - Backup & Restore (BR)

    * Fix a bug that causes the restore operation to fail when the encryption information is lost during backup retry #32423
    * Fix the issue that BR fails to back up RawKV #32607
    * Fix duplicate primary keys when inserting a record into a table after incremental restoration #33596

    * Fix a bug that BR incremental restore returns errors mistakenly due to DDL jobs with empty query #33322
    * Fix the potential issue that Regions might be unevenly distributed after a restore operation is finished #31034
    * Fix the issue that BR does not retry enough times when Regions are not consistent during restoration #33419
    * Fix the issue that BR might panic occasionally when merging small files is enabled #33801
    * Fix the issue that schedulers do not resume after BR or TiDB Lightning exits abnormally #33546

- TiCDC

    * Fix incorrect metrics caused by owner changes #4774
    * Fix the TiCDC panic issue that might occur because `Canal-JSON` does not support nil #4736
    * Fix a stability problem in workerpool used by Unified Sorter #4447
    * Fix a bug that sequence is incorrectly replicated in some cases #4563
    * Fix the TiCDC panic issue that might occur when `Canal-JSON` incorrectly handles `string` #4635
    * Fix a bug that a TiCDC node exits abnormally when a PD leader is killed #4248
    * Fix a bug that MySQL sink generates duplicated `replace` SQL statements when `batch-replace-enable` is disabled #4501
    * Fix the DML construct error caused by the `rename tables` DDL #5059
    * Fix the issue that in rare cases replication can be stuck if the owner is changed and the new scheduler is enabled (disabled by default) #4963
    * Fix the issue that the error ErrProcessorDuplicateOperations is reported when the new scheduler is enabled (disabled by default) #4769
    * Fix the issue that TiCDC fails to start when the first PD set in `--pd` is not available after TLS is enabled #4777
    * Fix the issue that the checkpoint metrics are missing when tables are being scheduled #4714

- TiDB Lightning

    * Fix the checksum error "GC life time is shorter than transaction duration" #32733
    * Fix the issue that TiDB Lightning gets stuck when it fails to check empty tables #31797
    * Fix a bug that TiDB Lightning may not delete the metadata schema when some import tasks do not contain source files #28144
    * Fix the issue that the precheck does not check local disk resources and cluster availability #34213

- TiDB Data Migration (DM)

    * Fix the issue that hundreds of "checkpoint has no change, skip sync flush checkpoint" print in the log and the replication is very slow #4619

* Fix a bug that long varchars report an error `Column length too big` #4637
* Fix the issue that execution errors of the update statement in safemode may cause the DM-worker panic #4317
* Fix the issue that in some cases manually executing the filtered DDL in the downstream might cause task resumption failure #5272
* Fix a bug that no data is returned for the `query-status` command when binlog is not enabled in the upstream #5121
* Fix the DM worker panic issue that occurs when the primary key is not first in the index returned by the `SHOW CREATE TABLE` statement #5159
* Fix the issue that CPU usage may increase and a large amount of log is printed when GTID is enabled or when the task is automatically resumed #5063

16.10.4 TiDB 5.4 Release Notes

Release date: February 15, 2022

TiDB version: 5.4.0

In v5.4, the key new features or improvements are as follows:

- Support the GBK character set
- Support using Index Merge to access data, which merges the filtering results of indexes on multiple columns
- Support reading stale data using a session variable
- Support persisting the configuration for collecting statistics
- Support using Raft Engine as the log storage engine of TiKV (experimental)
- Optimize the impact of backup on the cluster
- Support using Azure Blob storage as the backup storage
- Continuously improve the stability and performance of TiFlash and the MPP engine
- Add a switch in TiDB Lightning to determine whether to allow importing to an existing table with data
- Optimize the Continuous Profiling feature (experimental)
- TiSpark supports user identification and authentication

16.10.4.1 Compatibility changes

Note:

When upgrading from an earlier TiDB version to v5.4.0, if you want to know the compatibility change notes of all intermediate versions, you can check the Release Notes of the corresponding version.

16.10.4.1.1 System variables

Variable name	Change type	Description
tidb_enable_column_tracking ↪	Newly added	Controls whether to allow TiDB to collect PREDICATE ↪ COLUMNS. The default value is OFF.

Variable name	Change type	Description
tidb_enable_paging ↪	Newly added	Controls whether to use the method of paging to send coprocessor requests in IndexLookUp operator. The default value is OFF. For read queries that use IndexLookup and Limit and that Limit cannot be pushed down to IndexScan, there might be high latency for the read queries and high CPU usage for TiKV's unified ↪ read ↪ pool. In such cases, because the Limit operator only requires a small set of data, if you set tidb_enable_paging ↪ to ON, TiDB processes less data, which reduces query

Variable name	Change type	Description
tidb_enable_top_sql	Newly added	Controls whether to enable the Top SQL feature. The default value is OFF.
tidb_persist_analyze_options	Newly added	Controls whether to enable the ANALYZE configuration persistence feature. The default value is ON.
tidb_read_staleness	Newly added	Controls the range of historical data that can be read in the current session. The default value is 0.
tidb_regard_null_as_point	Newly added	Controls whether the optimizer can use a query condition including null equivalence as a prefix condition for index access.

Variable name	Change type	Description
`tidb_stats_load_sync_wait` ↪	Newly added	Controls whether to enable the synchronously loading statistics feature. The default value `0` means that the feature is disabled and that the statistics is asynchronously loaded. When the feature is enabled, this variable controls the maximum time that SQL optimization can wait for synchronously loading statistics before timeout.

Variable name	Change type	Description
tidb_stats_load_pseudo_timeout ↪	Newly added	Controls when synchronously loading statistics reaches timeout, whether SQL fails (OFF) or falls back to using pseudo statistics (ON). The default value is OFF.
tidb_backoff_lock_fast ↪	Modified	The default value is changed from 100 to 10.

| tidb_enable_index_merge | Modified | The default value is changed from OFF to ON.

If you upgrade a TiDB cluster from versions earlier than v4.0.0 to v5.4.0 or later, this variable is OFF by default.

If you upgrade a TiDB cluster from v4.0.0 or later to v5.4.0 or later, this variable remains the same as before the upgrade.

For the newly created TiDB clusters of v5.4.0 and later, this variable is ON by default.

| | tidb_store_limit | Modified | Before v5.4.0, this variable can be configured at instance level and globally. Starting from v5.4.0, this variable only supports global configuration. |

16.10.4.1.2 Configuration file parameters

Configuration file	Configuration	Change type	Description
TiDB	stats-load-concurrency	Newly added	Controls the maximum number of columns that the TiDB synchronously loading statistics feature can process concurrently. The default value is 5.
TiDB	stats-load-queue-size	Newly added	Controls the maximum number of column requests that the TiDB synchronously loading statistics feature can cache. The default value is1000.
TiKV	snap-generator-pool-size	Newly added	The size of the snap-generator thread pool. The default value is 2.

Configuration file	Configuration	Change type	Description
TiKV	`log.file.` ↪ `max-` ↪ `size`, `log.file.` ↪ `max-` ↪ `days`, `log.file.` ↪ `max-` ↪ `backups`	Newly added	For details, see TiKV Configuration File - `log.file`.

Configuration file	Configuration	Change type	Description
TiKV	`raft-engine`	Newly added	Includes `enable`, `dir`, `batch-compression-threshold`, `bytes-per-sync`, `target-file-size`, `purge-threshold`, `recovery-mode`, `recovery-read-block-size`, `recovery-read-block-size`, and `recovery-threads`. For details, see TiKV Configuration File - `raft-engine`.

Configuration file	Configuration	Change type	Description
TiKV	`backup.` ↪ `enable-` ↪ `auto-` ↪ `tune`	Newly added	In v5.3.0, the default value is `false`. Since v5.4.0, the default value is changed to `true`. This parameter controls whether to limit the resources used by backup tasks to reduce the impact on the cluster when the cluster resource utilization is high. In the default configuration, the speed of backup tasks might slow down.

Configuration file	Configuration	Change type	Description
TiKV	`log-level`, `log-format`, `log-file`, `log-rotation-size`	Modified	The names of TiKV log parameters are replaced with the names that are consistent with TiDB log parameters, which are `log.level`, `log.format`, `log.file.filename`, and `log.enable-timestamp`. If you only set the old parameters, and their values are set to non-default values, the old parameters remain compatible with the new parameters. If both old and new parameters are set, the new parameters take effect. For details, see TiKV Configuration File -

Configuration file	Configuration	Change type	Description
TiKV	`log-` ↪ `rotation` ↪ `-` ↪ `timespan` ↪	Deleted	The timespan between log rotations. After this timespan passes, a log file is rotated, which means a timestamp is appended to the file name of the current log file, and a new log file is created.
TiKV	`allow-` ↪ `remove-` ↪ `leader`	Deleted	Determines whether to allow deleting the main switch.
TiKV	`raft-msg-` ↪ `flush-` ↪ `interval` ↪	Deleted	Determines the interval at which Raft messages are sent in batches. The Raft messages are sent in batches at every interval specified by this configuration item.

Configuration file	Configuration	Change type	Description
PD	`log.level`	Modified	The default value is changed from "INFO" to "info", guaranteed to be case-insensitive.
TiFlash	`profile.default.enable_elastic_threadpool`	Newly added	Determines whether to enable or disable the elastic thread pool function. Enabling this configuration item can significantly improve TiFlash CPU utilization in high concurrency scenarios. The default value is `false`.

Configuration file	Configuration	Change type	Description
TiFlash	storage.format_version	Newly added	Specifies the version of DTFile. The default value is 2, under which hashes are embedded in the data file. You can also set the value to 3. When it is 3, the data file contains metadata and token data checksum, and supports multiple hash algorithms.
TiFlash	logger.count	Modified	The default value is changed to 10.
TiFlash	status.metrics_port	Modified	The default value is changed to 8234.
TiFlash	raftstore.apply-pool-size	Newly added	The allowable number of threads in the pool that flushes Raft data to storage. The default value is 4.

Configuration file	Configuration	Change type	Description
TiFlash	raftstore. ↪ store- ↪ pool- ↪ size	Newly added	The allowable number of threads that process Raft, which is the size of the Raftstore thread pool. The default value is 4.
TiDB Data Migration (DM)	collation_compatible ↪	Newly added	The mode to sync the default collation in CREATE SQL statements. The value options are "loose" (by default) and "strict".
TiCDC	max- ↪ message ↪ -bytes	Modified	Change the default value of max- ↪ message ↪ -bytes in Kafka sink to 104857601 (10MB)

Configuration file	Configuration	Change type	Description
TiCDC	`partition-num`	Modified	Change the default value of `partition-num` in Kafka Sink from `4` to `3`. It makes TiCDC send messages to Kafaka partitions more evenly.
TiDB Lightning	`meta-schema-name`	Modified	Specifies the schema name for the metadata in the target TiDB. From v5.4.0, this schema is created only if you have enabled parallel import (the corresponding parameter is `tikv-importer.incremental-import = true`).

Configuration file	Configuration	Change type	Description
TiDB Lightning	`task-info-schema-name`	Newly added	Specifies the name of the database where duplicated data is stored when TiDB Lightning detects conflicts. By default, the value is "lightning_task_info". Specify this parameter only if you have enabled the "duplicate-resolution" feature.
TiDB Lightning	`incremental-import`	Newly added	Determines whether to allow importing data to tables where data already exists. The default value is `false`.

16.10.4.1.3 Others

- An interface is added between TiDB and PD. When you use the `information_schema.TIDB_HOT_REGIONS_HISTORY` system table, TiDB needs to use PD in the corresponding version.
- TiDB Server, PD Server, and TiKV Server start using a unified naming method for the log-related parameters to manage log names, output formats, and the rules for rotation and expiration. For details, see TiKV configuration file - log.

- Since v5.4.0, if you create a SQL binding for an execution plan that has been cached via Plan Cache, the binding invalidates the plan already cached for the corresponding query. The new binding does not affect execution plans cached before v5.4.0.
- In v5.3 and earlier versions, TiDB Data Migration (DM) documentation is independent of TiDB documentation. Since v5.4, DM documentation is integrated into TiDB documentation with the same version. You can directly read DM documentation without accessing the DM documentation site.
- Remove the experimental feature of Point-in-time recovery (PITR) along with cdclog. Since v5.4.0, cdclog-based PITR and cdclog are no longer supported.
- Make the behavior of setting system variables to the "DEFAULT" more MySQL-compatible #29680
- Set the system variable `lc_time_names` to read-only #30084
- Set the scope of `tidb_store_limit` from INSTANCE or GLOBAL to GLOBAL #30756
- Forbid converting the integer type column to the time type column when the column contains zero #25728
- Fix the issue that no error is reported for the `Inf` or `NAN` value when inserting floating-point values #30148
- Fix the issue that the `REPLACE` statement incorrectly changes other rows when the auto ID is out of range #30301

16.10.4.2 New features

16.10.4.2.1 SQL

- **TiDB supports the GBK character set since v5.4.0**

  Before v5.4.0, TiDB supports `ascii`, `binary`, `latin1`, `utf8`, and `utf8mb4` character sets.

  To better support Chinese users, TiDB supports the GBK character set since v5.4.0. After enabling the `new_collations_enabled_on_first_bootstrap` option in the TiDB configuration file when initializing a TiDB cluster for the first time, the TiDB GBK character set supports both `gbk_bin` and `gbk_chinese_ci` collations.

  When using the GBK character set, you need to pay attention to the compatibility restrictions. For details, see Character Set and Collation - GBK.

16.10.4.2.2 Security

- **TiSpark supports user authentication and authorization**

  Since TiSpark 2.5.0, TiSpark supports both database user authentication and read-/write authorization at a database or table level. After enabling this feature, you can prevent the business from running unauthorized batch tasks such as draws to obtain data, which improves the stability and data security of online clusters.

This feature is disabled by default. When it is enabled, if a user operating through TiSpark does not have the needed permissions, the user gets an exception from TiSpark.

User document

- **TiUP supports generating an initial password for the root user**

  An `--init` parameter is introduced to the command for starting a cluster. With this parameter, in a TiDB cluster deployed using TiUP, TiUP generates an initial strong password for the database root user. This avoids security risks in using a root user with an empty password and ensures the security of databases.

  User document

16.10.4.2.3 Performance

- **Continue improving the stability and performance of the columnar storage engine TiFlash and the computing engine MPP**

  - Support pusing down more functions to the MPP engine:
    * String functions: `LPAD()`, `RPAD()`, `STRCMP()`
    * Date functions: `ADDDATE(string, real)`, `DATE_ADD(string, real)`, `DATE_SUB(string, real)`, `SUBDATE(string, real)`, `QUARTER()`
  - Introduce the elastic thread pool feature to improve resource utilization (experimental)
  - Improve the efficiency of converting data from row-based storage format to column-based storage format when replicating data from TiKV, which brings 50% improvement in the overall performance of data replication
  - Improve TiFlash performance and stability by tuning the default values of some configuration items. In an HTAP hybrid load, the performance of simple queries on a single table improves up to 20%.

  User documents: Supported push-down calculations, Configure the tiflash.toml file

- **Read historical data within a specified time range through a session variable**

  TiDB is a multi-replica distributed database based on the Raft consensus algorithm. In face of high-concurrency and high-throughput application scenarios, TiDB can scale out its read performance through follower replicas, separating read and write requests.

  For different application scenarios, TiDB provides two modes of follower read: strongly consistent read and weakly consistent history read. The strongly consistent read mode is suitable for application scenarios that require real-time data. However, in this mode, because of the data replication latency between leaders and followers and the reduced throughput, the read request might have high latency, especially for geo-distributed deployments.

For the application scenarios that have less strict requirements on real-time data, the history read mode is recommended. This mode can reduce latency and improve throughput. TiDB currently supports reading historical data by the following methods: Use SQL statements to read data from a time point in the past, or start a read-only transaction based on a time point in the past. Both methods support reading the historical data of a specific point in time or within a specified time range. For details, refer to Read Historical Data Using the `AS OF TIMESTAMP` Clause.

Since v5.4.0, TiDB improves the usability of the history read mode by supporting reading historical data within a specified time range through a session variable. This mode serves low-latency, high-throughput read requests in quasi-real-time scenarios. You can set the variable as follows:

```
set @@tidb_replica_read=leader_and_follower
set @@tidb_read_staleness="-5"
```

By this setting, TiDB can select the nearest leader or follower node and read the latest historical data within 5 seconds.

User document

- **GA for Index Merge**

  Index Merge is introduced in TiDB v4.0 as an experimental feature for SQL optimization. This method greatly accelerates condition filtering when a query requires scanning of multiple columns of data. Take the following query as an example. In the `WHERE` statement, if the filtering conditions connected by `OR` have their respective indexes on columns *key1* and *key2*, the Index Merge feature filters the respective indexes at the same time, merges the query results, and returns the merged result.

  ```
  SELECT * FROM table WHERE key1 <= 100 OR key2 = 200;
  ```

  Before TiDB v4.0, a query on a table supports using only one index for filtering at one time. If you want to query multiple columns of data, you can enable Index Merge to get the exact query result in a short time by using the indexes in individual columns. Index Merge avoids unnecessary full table scans and does not require establishing a large number of composite indexes.

  In v5.4.0, Index Merge becomes GA. However, you still need to pay attention to the following restrictions:

  - Index Merge supports only disjunctive normal form (X1 X2 …Xn). That is, this feature only works when filtering conditions in a `WHERE` clause are connected by `OR`.
  - For newly deployed TiDB clusters of v5.4.0 or later, this feature is enabled by default. For v5.4.0 or later TiDB clusters upgraded from earlier versions, this feature inherits the setting before the upgrade and you can change the setting as required (for TiDB clusters earlier than v4.0, this feature does not exist and is disabled by default).

User document

- **Support Raft Engine (experimental)**

  Support using Raft Engine as the log storage engine in TiKV. Compared with RocksDB, Raft Engine can reduce TiKV I/O write traffic by up to 40% and CPU usage by 10%, while improving foreground throughput by about 5% and reducing tail latency by 20% under certain loads. In addition, Raft Engine improves the efficiency of log recycling and fixes the issue of log accumulation in extreme conditions.

  Raft Engine is still an experimental feature and is disabled by default. Note that the data format of Raft Engine in v5.4.0 is not compatible with previous versions. Before upgrading the cluster, you need to make sure that Raft Engine on all TiKV nodes is disabled. It is recommended to use Raft Engine only in v5.4.0 or a later version.

  User document

- **Support collecting statistics on `PREDICATE COLUMNS` (experimental)**

  In most cases, when executing SQL statements, the optimizer only uses statistics of some columns (such as columns in the `WHERE`, `JOIN`, `ORDER BY`, and `GROUP BY` statements). These used columns are called `PREDICATE COLUMNS`.

  Since v5.4.0, you can set the value of the `tidb_enable_column_tracking` system variable to `ON` to enable TiDB to collect `PREDICATE COLUMNS`.

  After the setting, TiDB writes the `PREDICATE COLUMNS` information to the `mysql.column_stats_usage` system table every 100 * `stats-lease`. When the query pattern of your business is stable, you can use the `ANALYZE TABLE TableName PREDICATE COLUMNS` syntax to collect statistics on the `PREDICATE COLUMNS` columns only, which can greatly reduce the overhead of collecting statistics.

  User document

- **Support synchronously loading statistics (experimental)**

  Since v5.4.0, TiDB introduces the synchronously loading statistics feature. This feature is disabled by default. After enabling the feature, TiDB can synchronously load large-sized statistics (such as histograms, TopN, and Count-Min Sketch statistics) into memory when you execute SQL statements, which improves the completeness of statistics for SQL optimization.

  User document

16.10.4.2.4 Stability

- **Support persisting ANALYZE configurations**

  Statistics are one type of the basic information that the optimizer refers to when generating execution plans. The accuracy of the statistics directly affects whether the generated execution plans are reasonable. To ensure the accuracy of the statistics,

sometimes it is necessary to set different collection configurations for different tables, partitions, and indexes.

Since v5.4.0, TiDB supports persisting some `ANALYZE` configurations. With this feature, the existing configurations can be easily reused for future statistics collection.

The `ANALYZE` configuration persistence feature is enabled by default (the system variable `tidb_analyze_version` is `2` and `tidb_persist_analyze_options` is `ON` by default). You can use this feature to record the persistence configurations specified in the `ANALYZE` statement when executing the statement manually. Once recorded, the next time TiDB automatically updates statistics or you manually collect statistics without specifying these configurations, TiDB will collect statistics according to the recorded configurations.

User document

16.10.4.2.5 High availability and disaster recovery

- **Reduce the impact of backup tasks on the cluster**

  Backup & Restore (BR) introduces the auto-tune feature (enabled by default). This feature can reduce the impact of backup tasks on the cluster by monitoring the cluster resource usage and adjusting the number of threads used by the backup tasks. In some cases, if you increase the cluster hardware resource for backup and enable the auto-tune feature, it can limit the impact of backup tasks on the cluster to 10% or less.

User document

- **Support Azure Blob Storage as a target storage for backup**

Backup & Restore (BR) supports Azure Blob Storage as a remote backup storage. If you deploy TiDB in Azure Cloud, now you can back up the cluster data to the Azure Blob Storage service.

```
[User document](#backup-storages)
```

16.10.4.2.6 Data migration

- **TiDB Lightning introduces a new feature to determine whether to allow importing data to tables with data**

  TiDB Lightning introduces a configuration item`incremental-import`. It determines whether to allow importing data to tables with data. The default value is `false`. When using the parallel import mode, you must set the configuration to `true`.

  User document

- **TiDB Lightning introduces the schema name that stores the meta information for parallel import**

  TiDB Lightning introduces the `meta-schema-name` configuration item. In parallel import mode, this parameter specifies the schema name that stores the meta information for each TiDB Lightning instance in the target cluster. By default, the value is "lightning_metadata". The value set for this parameter must be the same for each TiDB Lightning instance that participates in the same parallel import; otherwise, the correctness of the imported data cannot be ensured.

  User document

- **TiDB Lightning introduces duplicate resolution**

  In Local-backend mode, TiDB Lightning outputs duplicated data before the data import is completed, and then removes that duplicated data from the database. You can resolve the duplicated data after the import is completed and select suitable data to insert according to application rules. It is recommended to clean upstream data sources based on duplicated data to avoid data inconsistency caused by duplicated data encountered in the subsequent incremental data migration phase.

  User document

- **Optimize the usage of relay log in TiDB Data Migration (DM)**

  - Recover the `enable-relay` switch in the `source` configuration.
  - Support dynamically enabling and disabling relay log using the `start-relay` and `stop-relay` commands.
  - Bind the status of relay log to `source`. `source` keeps its original status of being enabled or disabled after it is migrated to any DM-worker.
  - Move the storage path of relay log to the DM-worker configuration file.

  User document

- **Optimize the processing of collation in DM**

  Add the `collation_compatible` configuration item. The value options are `loose` (default) and `strict`:

  - If your application does not have strict requirements on collation, and the collation of query results can be different between the upstream and downstream, you can use the default `loose` mode to avoid reporting errors.
  - If your application has strict requirements on collation, and the collation must be consistent between the upstream and downstream, you can use the `strict` mode. However, if the downstream does not support the upstream's default collation, the data replication might report errors.

User document

- **Optimize `transfer source` in DM to support running replication tasks smoothly**

  When the DM-worker nodes have an unbalanced load, the `transfer source` command can be used to manually transfer the configuration of a `source` to another load. After the optimization, the `transfer source` command simplifies the manual operation. You can smoothly transfer the source instead of pausing all related tasks, because DM completes other operations internally.

- **DM OpenAPI becomes generally available (GA)**

  DM supports daily management via API, including adding data sources and managing tasks. In v5.4.0, DM OpenAPI becomes GA.

  User document

16.10.4.2.7 Diagnostic efficiency

- **Top SQL (experimental feature)**

  A new experimental feature, Top SQL (disabled by default), is introduced to help you easily find source-consuming queries.

  User document

16.10.4.2.8 TiDB data share subscription

- **Optimize the impact of TiCDC on clusters**

  Significantly reduces the impact on the performance of TiDB clusters when you use TiCDC. In the test environment, the performance impact of TiCDC on TiDB can be reduced to less than 5%.

16.10.4.2.9 Deployment and maintenance

- **Enhance Continuous Profiling (experimental)**

  - More components supported: Besides TiDB, PD, and TiKV, TiDB v5.4.0 also supports CPU profiling of TiFlash.
  - More forms of profiling display: Supports showing CPU profiling and Goroutine results on flame charts.
  - More deployment environments supported: Continuous Profiling can also be used for clusters deployed using TiDB Operator.

Continuous Profiling is disabled by default and can be enabled on TiDB Dashboard.

```
Continuous Profiling is applicable to clusters deployed or upgraded using
    ↪ TiUP of v1.9.0 or later or TiDB Operator of v1.3.0 or later.

[User document](#tidb-dashboard-instance-profiling---continuous-profiling)
```

16.10.4.3 Improvements

- TiDB
  - Support the `ADMIN {SESSION | INSTANCE | GLOBAL} PLAN_CACHE` syntax to clear the cached query plan #30370
- TiKV
  - Coprocessor supports paging API to process requests in a stream-like way #11448
  - Support `read-through-lock` so that read operations do not need to wait for secondary locks to be resolved #11402
  - Add a disk protection mechanism to avoid panic caused by disk space drainage #10537
  - Support archiving and rotating logs #11651
  - Reduce the system call by the Raft client and increase CPU efficiency #11309
  - Coprocessor supports pushing down substring to TiKV #11495
  - Improve the scan performance by skip reading locks in the Read Committed isolation level #11485
  - Reduce the default thread pool size used by backup operations and limit the use of thread pool when the stress is high #11000
  - Support dynamically adjusting the sizes of the Apply thread pool and the Store thread pool #11159
  - Support configuring the size of the `snap-generator` thread pool #11247
  - Optimize the issue of global lock race that occurs when there are many files with frequent reads and writes #250
- PD
  - Record the historic hotspot information by default #25281
  - Add signature for the HTTP component to identify the request source #4490
  - Update TiDB Dashboard to v2021.12.31 #4257
- TiFlash
  - Optimize the communication of local operators
  - Increase the non-temporary thread count of gRPC to avoid the frequent creation or destruction of threads

- Tools
  - Backup & Restore (BR)
    * Add a validity check for the key when BR performs encrypted backup #29794
  - TiCDC
    * Reduce the count of "EventFeed retry rate limited" logs #4006
    * Reduce the replication latency when replicating many tables #3900
    * Reduce the time for the KV client to recover when a TiKV store is down #3191
  - TiDB Data Migration (DM)
    * Lower the usage rate of CPU when the relay is enabled #2214
  - TiDB Lightning
    * Use optimistic transactions by default to write data to improve performance in TiDB-backend mode #30953
  - Dumpling
    * Improve compatibility when Dumpling checks the database version #29500
    * Add the default collation when dumping `CREATE DATABASE` and `CREATE TABLE` #3420

16.10.4.4 Bug fixes

- TiDB
  - Fix the issue of the `tidb_analyze_version` value change that occurs when upgrading the cluster from v4.x to v5.x #25422
  - Fix the issue of the wrong result that occurs when using different collations in a subquery #30748
  - Fix the issue that the result of `concat(ifnull(time(3))` in TiDB is different from that in MySQL #29498
  - Fix the issue of potential data index inconsistency in optimistic transaction mode #30410
  - Fix the issue that the query execution plan of IndexMerge is wrong when an expression cannot be pushed down to TiKV #30200
  - Fix the issue that concurrent column type change causes inconsistency between the schema and the data #31048
  - Fix the issue that the IndexMerge query result is wrong when there is a subquery #30913
  - Fix the panic issue that occurs when the FetchSize is set too large in the client #30896
  - Fix the issue that LEFT JOIN might be mistakenly converted to INNER JOIN #20510

  - Fix the issue that panic might occur when the `CASE-WHEN` expression and collation are used together #30245
  - Fix the issue of wrong query result that occurs when the `IN` value contains a binary constant #31261
  - Fix the issue of wrong query result that occurs when CTE has a subquery #31255
  - Fix the issue that executing the `INSERT ... SELECT ... ON DUPLICATE KEY UPDATE` statement gets panic #28078
  - Fix the issue that INDEX HASH JOIN returns the `send on closed channel` error #31129

- TiKV

  - Fix the issue that the MVCC deletion records are not cleared by GC #11217
  - Fix the issue that retrying prewrite requests in the pessimistic transaction mode might cause the risk of data inconsistency in rare cases #11187
  - Fix the issue that GC scan causes memory overflow #11410
  - Fix the issue that RocksDB flush or compaction causes panic when the disk capacity is full #11224

- PD

  - Fix the issue that Region statistics are not affected by `flow-round-by-digit` #4295
  - Fix the issue that the scheduling operator cannot fail fast because the target store is down #3353
  - Fix the issue that Regions on offline stores cannot be merged #4119
  - Fix the issue that the cold hotspot data cannot be deleted from the hotspot statistics #4390

- TiFlash

  - Fix the issue that TiFlash might panic when an MPP query is stopped
  - Fix the issue that queries with the `where <string>` clause return wrong results
  - Fix the potential issue of data inconsistency that might occur when setting the column type of an integer primary key to a larger range
  - Fix the issue that when an input time is earlier than 1970-01-01 00:00:01 UTC, the behavior of `unix_timestamp` is inconsistent with that of TiDB or MySQL
  - Fix the issue that TiFlash might return the `EstablishMPPConnection` error after it is restarted
  - Fix the issue that the `CastStringAsDecimal` behavior is inconsistent in TiFlash and in TiDB/TiKV
  - Fix the issue that the `DB::Exception: Encode type of coprocessor response is not CHBlock` error is returned in the query result
  - Fix the issue that the `castStringAsReal` behavior is inconsistent in TiFlash and in TiDB/TiKV

  - Fix the issue that the returned result of the `date_add_string_xxx` function in TiFlash is inconsistent with that in MySQL

- Tools

  - Backup & Restore (BR)

    * Fix the potential issue that Region distribution might be uneven after a restore operation is finished #30425
    * Fix the issue that `'/'` cannot be specified in endpoint when `minio` is used as the backup storage #30104
    * Fix the issue that system tables cannot be restored because concurrently backing up system tables makes the table name fail to update #29710

  - TiCDC

    * Fix the issue that replication cannot be performed when `min.insync.replicas` is smaller than `replication-factor` #3994
    * Fix the issue that the `cached region` monitoring metric is negative #4300
    * Fix the issue that `mq sink write row` does not have monitoring data #3431
    * Fix the compatibility issue of `sql mode` #3810
    * Fix the potential panic issue that occurs when a replication task is removed #3128
    * Fix the issue of panic and data inconsistency that occurs when outputting the default column value #3929
    * Fix the issue that default values cannot be replicated #3793
    * Fix the potential issue that the deadlock causes a replication task to get stuck #4055
    * Fix the issue that no log is output when the disk is fully written #3362
    * Fix the issue that special comments in DDL statements cause the replication task to stop #3755
    * Fix the issue that the service cannot be started because of a timezone issue in the RHEL release #3584
    * Fix the issue of potential data loss caused by inaccurate checkpoint #3545
    * Fix the OOM issue in the container environment #1798
    * Fix the issue of replication stop caused by the incorrect configuration of `config.Metadata.Timeout` #3352

  - TiDB Data Migration (DM)

    * Fix the issue that the `CREATE VIEW` statement interrupts data replication #4173
    * Fix the issue the schema needs to be reset after a DDL statement is skipped #4177
    * Fix the issue that the table checkpoint is not updated in time after a DDL statement is skipped #4184
    * Fix a compatibility issue of the TiDB version with the Parser version #4298
    * Fix the issue that syncer metrics are updated only when querying the status #4281

- TiDB Lightning
  - Fix the issue of wrong import result that occurs when TiDB Lightning does not have the privilege to access the `mysql.tidb` table #31088
  - Fix the issue that some checks are skipped when TiDB Lightning is restarted #30772
  - Fix the issue that TiDB Lightning fails to report the error when the S3 path does not exist #30674
- TiDB Binlog
  - Fix the issue that Drainer fails because it is incompatible with the `CREATE PLACEMENT POLICY` statement #1118

16.11 v5.3

16.11.1 TiDB 5.3.4 Release Notes

Release date: November 24, 2022

TiDB version: 5.3.4

16.11.1.1 Improvements

- TiKV
  - Reload TLS certificate automatically for each update to improve availability #12546

16.11.1.2 Bug fixes

- TiDB
  - Fix the issue that the Region cache is not cleaned up in time when the Region is merged #37141
  - Fix the issue that TiDB writes wrong data due to the wrong encoding of the `ENUM` or `SET` column #32302
  - Fix the issue that database-level privileges are incorrectly cleaned up #38363
  - Fix the issue that the `grantor` field is missing in the `mysql.tables_priv` table #38293
  - Fix the issue that `KILL TIDB` cannot take effect immediately on idle connections #24031
  - Fix the issue that the return type of `date_add` and `date_sub` is different between TiDB and MySQL #36394, #27573
  - Fix the incorrect `INSERT_METHOD` value when Parser restores table options #38368

  - Fix the issue that authentication fails when a MySQL client of v5.1 or earlier connects to the TiDB server #29725
  - Fix wrong results of `GREATEST` and `LEAST` when passing in unsigned `BIGINT` arguments #30101
  - Fix the issue that the result of `concat(ifnull(time(3))` in TiDB is different from that in MySQL #29498
  - Fix the issue that the `avg()` function returns `ERROR 1105 (HY000): other error for mpp stream: Could not convert to the target type - - value is out of range.` when queried from TiFlash #29952
  - Fix the issue that `ERROR 1105 (HY000): close of nil channel` is returned when using `HashJoinExec` #30289
  - Fix the issue that TiKV and TiFlash return different results when querying logical operations #37258
  - Fix the issue that the `EXPLAIN ANALYZE` statement with DML executors might return result before the transaction commit finishes #37373
  - Fix the issue that Region cache is not cleared properly after merging many Regions #37174
  - Fix the issue that the `EXECUTE` statement might throw an unexpected error in specific scenarios #37187
  - Fix the issue that `GROUP CONCAT` with `ORDER BY` might fail when the `ORDER BY` clause contains a correlated subquery #18216
  - Fix wrong results returned when length and width are incorrectly set for Decimal and Real when using plan cache #29565

- PD

  - Fix the issue that PD cannot correctly handle dashboard proxy requests #5321
  - Fix the issue that the TiFlash learner replica might not be created in specific scenarios #5401
  - Fix inaccurate Stream timeout and accelerate leader switchover #5207

- TiFlash

  - Fix the issue that logical operators return wrong results when the argument type is UInt8 #6127
  - Fix the issue that TiFlash bootstrap fails when `0.0` is used as the default value for integers, for example, `` `i` int(11)NOT NULL DEFAULT '0.0' `` #3157

- Tools

  - Dumpling
    * Fix the issue that Dumpling cannot dump data when the `--compress` option and the S3 output directory are set simultaneously #30534
  - TiCDC
    * Fix the issue that changefeed state is incorrect because a MySQL-related error is not reported to the owner in time #6698

16.11.2 TiDB 5.3.3 Release Note

Release date: September 14, 2022

TiDB version: 5.3.3

16.11.2.1 Bug fix

- TiKV
  - Fix the issue of continuous SQL execution errors in the cluster after the PD leader is switched or PD is restarted.
    * Cause: This issue is caused by a TiKV bug that TiKV does not retry sending heartbeat information to PD client after heartbeat requests fail, until TiKV reconnects to PD client. As a result, the Region information on the failed TiKV node becomes outdated, and TiDB cannot get the latest Region information, which causes SQL execution errors.
    * Affected versions: v5.3.2 and v5.4.2. This issue has been fixed in v5.3.3. If you are using v5.3.2, you can upgrade your cluster to v5.3.3.
    * Workaround: In addition to upgrade, you can also restart the TiKV nodes that cannot send Region heartbeat to PD, until there is no Region heartbeat to send.

    For bug details, see #12934.

16.11.3 TiDB 5.3.2 Release Notes

Release Date: June 29, 2022

TiDB version: 5.3.2

> **Warning:**
>
> It is not recommended to use v5.3.2, because this version has a known bug. For details, see #12934. This bug has been fixed in v5.3.3. It is recommended to use v5.3.3.

16.11.3.1 Compatibility Changes

- TiDB
  - Fix the issue that the `REPLACE` statement incorrectly changes other rows when the auto ID is out of range #29483

- PD
  - Disable compiling swagger server by default #4932

16.11.3.2 Improvements

- TiKV
  - Reduce the system call by the Raft client and increase CPU efficiency #11309
  - Improve the health check to detect unavailable Raftstore, so that the TiKV client can update Region Cache in time #12398
  - Transfer the leadership to CDC observer to reduce latency jitter #12111
  - Add more metrics for the garbage collection module of Raft logs to locate performance problems in the module #11374
- Tools
  - TiDB Data Migration (DM)
    * Support Syncer using the working directory of the DM-worker rather than `/tmp` to write internal files, and cleaning the directory after the task is stopped #4107
  - TiDB Lightning
    * Optimize Scatter Region to batch mode to improve the stability of the Scatter Region process #33618

16.11.3.3 Bug Fixes

- TiDB
  - Fix the issue that Amazon S3 cannot correctly calculate the size of compressed data #30534
  - Fix the issue of potential data index inconsistency in optimistic transaction mode #30410
  - Fix the issue that a SQL operation is canceled when its JSON type column joins its `CHAR` type column #29401
  - Previously, when a network connectivity issue occurred, TiDB did not always correctly free the resources held by the disconnected session. This issue has been fixed so that open transactions can be rolled back and other associated resources can be released. #34722
  - Fix the issue of the `data and columnID count not match` error that occurs when inserting duplicated values with TiDB Binlog enabled #33608
  - Fix the issue that query result might be wrong when Plan Cache is started in the RC isolation level #34447

  - Fix the session panic that occurs when executing the prepared statement after table schema change with the MySQL binary protocol #33509
  - Fix the issue that the table attributes are not indexed when a new partition is added and the issue that the table range information is not updated when the partition changes #33929
  - Fix the issue that the TiDB server might run out of memory when the `INFORMATION_SCHEMA.CLUSTER_SLOW_QUERY` table is queried. This issue can be triggered when you check slow queries on the Grafana dashboard #33893
  - Fix the issue that some DDL statements might be stuck for a period after the PD node of a cluster is replaced #33908
  - Fix the issue that granting the `all` privilege might fail in clusters that are upgraded from v4.0 #33588
  - Fix wrong results of deleting data of multiple tables using `left join` #31321
  - Fix a bug that TiDB may dispatch duplicate tasks to TiFlash #32814
  - Fix the issue that the background HTTP service of TiDB might not exit successfully and makes the cluster in an abnormal state #30571
  - Fix the panic issue caused by the `fatal error: concurrent map read and map write` error #35340

- TiKV

  - Fix the issue of frequent PD client reconnection that occurs when the PD client meets an error #12345
  - Fix the issue of time parsing error that occurs when the `DATETIME` values contain a fraction and `Z` #12739
  - Fix the issue that TiKV panics when performing type conversion for an empty string #12673
  - Fix the possible duplicate commit records in pessimistic transactions when async commit is enabled #12615
  - Fix the bug that TiKV reports the `invalid store ID 0` error when using Follower Read #12478
  - Fix the issue of TiKV panic caused by the race between destroying peers and batch splitting Regions #12368
  - Fix the issue that successfully committed optimistic transactions may report the `Write Conflict` error when the network is poor #34066
  - Fix the issue that TiKV panics and destroys peers unexpectedly when the target Region to be merged is invalid #12232
  - Fix a bug that stale messages cause TiKV to panic #12023
  - Fix the issue of intermittent packet loss and out of memory (OOM) caused by the overflow of memory metrics #12160
  - Fix the potential panic issue that occurs when TiKV performs profiling on Ubuntu 18.04 #9765
  - Fix the issue that tikv-ctl returns an incorrect result due to its wrong string match #12329
  - Fix a bug that replica reads might violate the linearizability #12109

  - Fix the TiKV panic issue that occurs when the target peer is replaced with the peer that is destroyed without being initialized when merging a Region #12048
  - Fix a bug that TiKV might panic if it has been running for 2 years or more #11940

- PD

  - Fix the PD panic that occurs when a hot region has no leader #5005
  - Fix the issue that scheduling cannot start immediately after the PD leader transfer #4769
  - Fix the issue that a removed tombstone store appears again after the PD leader transfer #4941
  - Fix a bug of TSO fallback in some corner cases #4884
  - Fix the issue that when there exists a Store with large capacity (2T for example), fully allocated small Stores cannot be detected, which results in no balance operator being generated #4805
  - Fix the issue that schedulers do not work when `SchedulerMaxWaitingOperator` is set to `1` #4946
  - Fix the issue that the label distribution has residual labels in the metrics #4825

- TiFlash

  - Fix the bug that invalid storage directory configurations lead to unexpected behaviors #4093
  - Fix `TiFlash_schema_error` reported when `NOT NULL` columns are added #4596
  - Fix repeated crashes caused by the `commit state jump backward` errors #2576
  - Fix potential data inconsistency after a lot of INSERT and DELETE operations #4956
  - Fix a bug that canceled MPP queries might cause tasks to hang forever when the local tunnel is enabled #4229
  - Fix false reports of inconsistent TiFlash versions when TiFlash uses remote read #3713
  - Fix a bug that an MPP query might fail due to random gRPC keepalive timeout #4662
  - Fix a bug that an MPP query might hang forever if there are retries in the exchange receiver #3444
  - Fix the wrong result that occurs when casting `DATETIME` to `DECIMAL` #4151
  - Fix the overflow that occurs when casting `FLOAT` to `DECIMAL` #3998
  - Fix the potential `index out of bounds` error if calling `json_length` with empty string #2705
  - Fix wrong decimal comparison results in corner cases #4512
  - Fix bug that MPP query may hang forever if query failed in join build stage #4195
  - Fix possible wrong results when a query contains the `where <string>` clause #3447

  - Fix the issue that the `CastStringAsReal` behavior is inconsistent in TiFlash and in TiDB or TiKV #3475
  - Fix incorrect `microsecond` when casting string to datetime #3556
  - Fix potential errors when querying on a table with many delete operations #4747
  - Fix a bug that TiFlash reports many "Keepalive watchdog fired" errors randomly #4192
  - Fix a bug that data not matching any region range remains on a TiFlash node #4414
  - Fix a bug that MPP tasks might leak threads forever #4238
  - Fix a bug that empty segments cannot be merged after GC #4511
  - Fix the panic issue that occurs when TLS is enabled #4196
  - Fix the issue that expired data is recycled slowly #4146
  - Fix the bug that invalid storage directory configurations lead to unexpected behaviors #4093
  - Fix the bug that some exceptions are not handled properly #4101
  - Fix the potential query error after adding columns under heavy read workload #3967
  - Fix the bug that the `STR_TO_DATE()` function incorrectly handles leading zeros when parsing microseconds #3557
  - Fix the issue that TiFlash might return the `EstablishMPPConnection` error after it is restarted #3615

- Tools

  - Backup & Restore (BR)

    * Fix duplicate primary keys when inserting a record into a table after incremental restoration #33596
    * Fix the issue that schedulers do not resume after BR or TiDB Lightning exits abnormally #33546
    * Fix a bug that BR incremental restore returns errors mistakenly due to DDL jobs with empty query #33322
    * Fix the issue that BR does not retry enough times when Regions are not consistent during restoration #33419
    * Fix a bug that BR gets stuck when the restore operation meets some unrecoverable errors #33200
    * Fix the issue that BR fails to back up RawKV #32607
    * Fix the issue that BR cannot handle S3 internal errors #34350

  - TiCDC

    * Fix incorrect metrics caused by owner changes #4774
    * Fix the bug that the redo log manager flushes logs before writing logs #5486
    * Fix the bug that the resolved ts moves too fast when some tables are not maintained by the redo writer #5486
    * Add the UUID suffix to the redo log file name to fix the issue that file name conflicts may cause data loss #5486

    * Fix the bug that MySQL Sink may save a wrong checkpointTs #5107
    * Fix the issue that TiCDC clusters may panic after upgrade #5266
    * Fix the issue that changefeed gets stuck when tables are repeatedly scheduled in the same node #4464
    * Fix the issue that TiCDC fails to start when the first PD set in `--pd` is not available after TLS is enabled #4777
    * Fix a bug that querying status through open API may be blocked when the PD node is abnormal #4778
    * Fix a stability problem in workerpool used by Unified Sorter #4447
    * Fix a bug that sequence is incorrectly replicated in some cases #4563
  - TiDB Data Migration (DM)
    * Fix the issue that DM occupies more disk space after the task automatically resumes #3734 #5344
    * Fix an issue that the uppercase table cannot be replicated when `case-sensitive: true` is not set #5255
    * Fix the issue that in some cases manually executing the filtered DDL in the downstream might cause task resumption failure #5272
    * Fix the DM worker panic issue that occurs when the primary key is not first in the index returned by the `SHOW CREATE TABLE` statement #5159
    * Fix the issue that CPU usage may increase and a large amount of log is printed when GTID is enabled or when the task is automatically resumed #5063
    * Fix the issue that the relay log may be disabled after the DM-master reboots #4803
  - TiDB Lightning
    * Fix the issue of Local-backend import failure caused by out-of-bounds data in the `auto_increment` column #27937
    * Fix the issue that the precheck does not check local disk resources and cluster availability #34213
    * Fix the checksum error "GC life time is shorter than transaction duration" #32733

16.11.4 TiDB 5.3.1 Release Notes

Release Date: March 3, 2022

TiDB version: 5.3.1

16.11.4.1 Compatibility changes

- Tools
  - TiDB Lightning
    * Change the default value of `regionMaxKeyCount` from 1_440_000 to 1_280_000, to avoid too many empty Regions after data import #30018

16.11.4.2 Improvements

- TiDB
  - Optimize the mapping logic of user login mode to make the logging more MySQL-compatible #30450
- TiKV
  - Reduce the TiCDC recovery time by reducing the number of the Regions that require the Resolve Locks step #11993
  - Speed up the Garbage Collection (GC) process by increasing the write batch size when performing GC to Raft logs #11404
  - Update the proc filesystem (procfs) to v0.12.0 #11702
- PD
  - Optimize the content format of the `DR_STATE` file #4341
- Tools
  - TiCDC
    * Expose configuration parameters of the Kafka producer to make them configurable in TiCDC #4385
    * Add a pre-cleanup process upon TiCDC startup if S3 is used as backend storage #3878
    * The TiCDC client works when no certificate name is specified #3627
    * Manage sink checkpoints per table to avoid unexpected advance of checkpoint timestamps #3545
    * Add the exponential backoff mechanism for restarting a changefeed. #3329
    * Change the default value of Kafka Sink `partition-num` to 3 so that TiCDC distributes messages across Kafka partitions more evenly #3337
    * Reduce the count of "EventFeed retry rate limited" logs #4006
    * Set the default value of `max-message-bytes` to 10M #4041
    * Add more Prometheus and Grafana monitoring metrics and alerts, including `no owner alert`, `mounter row`, `table sink total row`, and `buffer sink total row` #4054 #1606
    * Reduce the time for the KV client to recover when a TiKV store is down #3191
  - TiDB Lightning
    * Refine the output message of the precheck to make it more user-friendly when the local disk space check fails #30395

16.11.4.3 Bug fixes

- TiDB
  - Fix the issue that `date_format` in TiDB handles `'\n'` in a MySQL-incompatible way #32232
  - Fix the issue that `alter column set default` wrongly updates the table schema #31074
  - Fix a bug that `tidb_super_read_only` is not automatically enabled when `tidb_restricted_read_only` is enabled #31745
  - Fix the issue that the `greatest` or `least` function with collation gets a wrong result #31789
  - Fix the MPP task list empty error when executing a query #31636
  - Fix wrong results of index join caused by an innerWorker panic #31494
  - Fix wrong query results after changing the column type from `FLOAT` to `DOUBLE` #31372
  - Fix the `invalid transaction` error when executing a query using index lookup join #30468
  - Fix wrong query results due to the optimization of `Order By` #30271
  - Fix the issue that the configurations of `MaxDays` and `MaxBackups` do not take effect on the slow log #25716
  - Fix the issue that executing the `INSERT ... SELECT ... ON DUPLICATE KEY UPDATE` statement gets panic #28078
- TiKV
  - Fix the panic issue caused by deleting snapshot files when the peer status is `Applying` #11746
  - Fix the issue of QPS drop when flow control is enabled and `level0_slowdown_trigger` is set explicitly #11424
  - Fix the panic issue that occurs when the cgroup controller is not mounted #11569
  - Fix the issue that the latency of Resolved TS increases after TiKV stops operating #11351
  - Fix a bug that TiKV cannot delete a range of data (`unsafe_destroy_range` cannot be executed) when the GC worker is busy #11903
  - Fix the issue that destroying a peer might cause high latency #10210
  - Fix a bug that the `any_value` function returns a wrong result when regions are empty #11735
  - Fix the issue that deleting an uninitialized replica might cause an old replica to be recreated #10533
  - Fix the metadata corruption issue when `Prepare Merge` is triggered after a new election is finished but the isolated peer is not informed #11526
  - Fix the deadlock issue that happens occasionally when coroutines run too fast #11549
  - Fix the issue that a down TiKV node causes the resolved timestamp to lag #11351

  - Fix the issue that batch messages are too large in Raft client implementation #9714
  - Fix a panic issue that occurs when Region merge, ConfChange, and Snapshot happen at the same time in extreme conditions #11475
  - Fix the issue that TiKV cannot detect the memory lock when TiKV performs a reverse table scan #11440
  - Fix the issue that RocksDB flush or compaction causes panic when the disk capacity is full #11224
  - Fix a bug that tikv-ctl cannot return the correct Region-related information #11393
  - Fix the issue that the average latency of the by-instance gRPC requests is inaccurate in TiKV metrics #11299

- PD

  - Fix a bug that the scheduling process has the unnecessary JointConsensus steps in certain cases #4362
  - Fix a bug that the scheduling cannot be executed when demoting a voter directly #4444
  - Fix a data race issue that occurs when updating the configuration of the replication mode of replicas #4325
  - Fix a bug that the Read lock is not released in certain cases #4354
  - Fix the issue that the cold hotspot data cannot be deleted from the hotspot statistics #4390

- TiFlash

  - Fix the issue that `cast(arg as decimal(x,y))` returns a wrong result when the input argument `arg` overflows the range of `decimal(x,y)`
  - Fix the TiFlash crash issue that occurs when `max_memory_usage` and `max_memory_usage_for_all_queries` are enabled
  - Fix the issue that `cast(string as real)` returns a wrong result
  - Fix the issue that `cast(string as decimal)` returns a wrong result
  - Fix potential data inconsistency after altering a primary key column to a larger int data type
  - Fix the bug that when `in` has multiple arguments in the statements like `select (arg0, arg1)in (x,y)`, `in` returns a wrong result
  - Fix the issue that TiFlash might panic when an MPP query is stopped
  - Fix the issue that `str_to_date` returns a wrong result when the input argument has leading zeros
  - Fix the issue that the query returns a wrong result when the filter is in the `where <string>` format
  - Fix the issue that `cast(string as datetime)` returns a wrong result when the input argument `string` is in the `%Y-%m-%d\n%H:%i:%s` format

- Tools

- Backup & Restore (BR)
  * Fix the potential issue that Regions might be unevenly distributed after a restore operation is finished #31034
- TiCDC
  * Fix a bug that long varchars report an error `Column length too big` #4637
  * Fix a bug that a TiCDC node exits abnormally when a PD leader is killed #4248
  * Fix the issue that execution errors of the update statement in safemode may cause the DM-worker panic #4317
  * Fix the issue that cached region metric of the TiKV client may be negative #4300
  * Fix the bug that HTTP API panics when the required processor information does not exist #3840
  * Fix a bug that redo logs are not cleaned up when removing a paused changefeed #4740
  * Fix OOM in container environments #1798
  * Fix a bug that stopping a loading task results in unexpected transfer of the task #3771
  * Fix the issue that wrong progress is returned for the `query-status` command on loader #3252
  * Fix the issue that HTTP API fails to work if there are TiCDC nodes of different versions in a cluster #3483
  * Fix the issue that TiCDC exits abnormally when the S3 storage is configured with TiCDC Redo Log #3523
  * Fix the issue that default values cannot be replicated #3793
  * Fix a bug that MySQL sink generates duplicated `replace` SQL statements if `batch-replace-enable` is disabled #4501
  * Fix the issue that syncer metrics are updated only when querying the status #4281
  * Fix the issue that `mq sink write row` does not have monitoring data #3431
  * Fix the issue that replication cannot be performed when `min.insync.` ↪ `replicas` is smaller than `replication-factor` #3994
  * Fix the issue that `mq sink write row` does not have monitoring data #3431
  * Fix the potential panic issue that occurs when a replication task is removed #3128
  * Fix the potential issue that the deadlock causes a replication task to get stuck #4055
  * Fix the TiCDC panic issue that occurs when manually cleaning the task status in etcd #2980
  * Fix the issue that special comments in DDL statements cause the replication task to stop #3755
  * Fix the issue of replication stop caused by the incorrect configuration of `config.Metadata.Timeout` #3352
  * Fix the issue that the service cannot be started because of a timezone issue

in some RHEL releases #3584
    * Fix the issue that `stopped` changefeeds resume automatically after a cluster upgrade #3473
    * Fix the issue that default values cannot be replicated #3793
    * Fix the issue of overly frequent warnings caused by MySQL sink deadlock #2706
    * Fix the bug that the `enable-old-value` configuration item is not automatically set to `true` on Canal and Maxwell protocols #3676
    * Fix the issue that Avro sink does not support parsing JSON type columns #3624
    * Fix the negative value error in the changefeed checkpoint lag #3010
  - TiDB Data Migration (DM)
    * Fix a bug that the relay status in the DM-master is wrong after restarting the DM-master and DM-worker in a particular order #3478
    * Fix a bug that the DM-worker fails to boot up after a restart #3344
    * Fix a bug that a DM task fails if running a PARTITION DDL takes too long time #3854
    * Fix a bug that DM may report `invalid sequence` when upstream is MySQL 8.0 #3847
    * Fix a bug of data loss when DM does finer grained retry #3487
    * Fix the issue that the `CREATE VIEW` statement interrupts data replication #4173
    * Fix the issue the schema needs to be reset after a DDL statement is skipped #4177
  - TiDB Lightning
    * Fix the bug that TiDB Lightning may not delete the metadata schema when some import tasks do not contain source files #28144
    * Fix the bug that TiDB Lightning returns an error if the storage URL prefix is "gs://xxx", instead of "gcs://xxx" #32742
    * Fix the issue that setting –log-file="-" does not print any log to stdout #29876
    * Fix the issue that TiDB Lightning does not report errors when the S3 storage path does not exist #30709

16.11.5 TiDB 5.3 Release Notes

Release date: November 30, 2021

TiDB version: 5.3.0

In v5.3, the key new features or improvements are as follows:

- Introduce temporary tables to simplify your application logic and improve performance
- Support setting attributes for tables and partitions

- Support creating users with the least privileges on TiDB Dashboard to enhance system security
- Optimize the timestamp processing flow in TiDB to improve the overall performance
- Enhance the performance of TiDB Data Migration (DM) so that data is migrated from MySQL to TiDB with lower latency
- Support parallel import using multiple TiDB Lightning instances to improve the efficiency of full data migration
- Support saving and restoring the on-site information of a cluster with a single SQL statement, which helps improve the efficiency of troubleshooting issues relating to execution plans
- Support the continuous profiling experimental feature to improve the observability of database performance
- Continue optimizing the storage and computing engines to improve the system performance and stability
- Reduce the write latency of TiKV by separating I/O operations from Raftstore thread pool (disabled by default)

16.11.5.1 Compatibility changes

> **Note:**
>
> When upgrading from an earlier TiDB version to v5.3.0, if you want to know the compatibility change notes of all intermediate versions, you can check the Release Notes of the corresponding version.

16.11.5.1.1 System variables

Variable name	Change type	Description
`tidb_enable_noop_functions` ↪	Modified	Temporary tables are now supported by TiDB so `CREATE` ↪ `TEMPORARY` ↪ `TABLE` and `DROP` ↪ `TEMPORARY` ↪ `TABLE` no longer require enabling `tidb_enable_noop_functions` ↪ .

Variable name	Change type	Description
tidb_enable_pseudo_for_outdated_stats ↪	Newly added	Controls the behavior of the optimizer when the statistics on a table expire. The default value is ON. When the number of modified rows in the table is greater than 80% of the total rows (This ratio can be adjusted by the configuration pseudo-estimate-ratio), the optimizer considers that the statistics other than the total number of rows are no longer reliable and use pseudo statistics instead. When you set the value as OFF, even if the statistics expire, the optimizer still uses them.

Variable name	Change type	Description
`tidb_enable_tso_follower_proxy` ↪	Newly added	Determines whether to enable or disable the TSO Follower Proxy feature. The default value is `OFF`, which means the TSO Follower Proxy feature is disabled. At this time, TiDB only gets TSO from PD leader. When this feature is enabled, TiDB evenly sends the requests to all PD nodes when acquiring TSO. The PD follower then forwards the TSO requests to reduce the CPU pressure of PD leader.

Variable name	Change type	Description
tidb_tso_client_batch_max_wait_time ↪	Newly added	Sets the maximum waiting time for a batch saving operation when TiDB requests TSO from PD. The default value is 0, which means no additional waiting.
tidb_tmp_table_max_size ↪	Newly added	Limits the maximum size of a single temporary table. If the temporary table exceeds this size, an error will occur.

16.11.5.1.2 Configuration file parameters

Configuration file	Configuration item	Change type	Description
TiDB	prepared-plan-cache.capacity	Modified	Controls the number of cached statements. The default value is changed from 100 to 1000.

Configuration file	Configuration item	Change type	Description
TiKV	storage. ↪ reserve ↪ -space	Modified	Controls space reserved for disk protection when TiKV is started. Starting from v5.3.0, 80% of the reserved space is used as the extra disk space required for operations and maintenance when the disk space is insufficient, and the other 20% is used to store temporary files.
TiKV	memory- ↪ usage- ↪ limit	Modified	This configuration item is new in TiDB v5.3.0 and its value is calculated based on storage.block-cache.capacity.

Configuration file	Configuration item	Change type	Description
TiKV	raftstore. ↪ store- ↪ io-pool ↪ -size	Newly added	The allowable number of threads that process Raft I/O tasks, which is the size of the StoreWriter thread pool. When you modify the size of this thread pool, refer to Performance tuning for TiKV thread pools.

Configuration file	Configuration item	Change type	Description
TiKV	`raftstore.` ↪ `raft-` ↪ `write-` ↪ `size-` ↪ `limit`	Newly added	Determines the threshold at which Raft data is written into the disk. If the data size is larger than the value of this configuration item, the data is written to the disk. When the value of `raftstore.` ↪ `store-` ↪ `io-pool` ↪ `-size` is `0`, this configuration item does not take effect.

Configuration file	Configuration item	Change type	Description
TiKV	`raftstore.` ↪ `raft-` ↪ `msg-` ↪ `flush-` ↪ `interval` ↪	Newly added	Determines the interval at which Raft messages are sent in batches. The Raft messages in batches are sent at every interval specified by this configuration item. When the value of `raftstore.` ↪ `store-` ↪ `io-pool` ↪ `-size` is `0`, this configuration item does not take effect.
TiKV	`raftstore.` ↪ `raft-` ↪ `reject-` ↪ `transfer` ↪ `-leader` ↪ `-` ↪ `duration` ↪	Deleted	Determines the smallest duration that a Leader is transferred to a newly added node.

Configuration file	Configuration item	Change type	Description
PD	`log.file.` ↪ `max-` ↪ `days`	Modified	Controls the maximum number of days that logs are retained for. The default value is changed from `1` to `0`.
PD	`log.file.` ↪ `max-` ↪ `backups`	Modified	Controls the maximum number of logs that are retained for. The default value is changed from `7` to `0`.

Configuration file	Configuration item	Change type	Description
PD	`patrol-region-interval`	Modified	Controls the running frequency at which replicaChecker checks the health state of a Region. The smaller this value is, the faster replicaChecker runs. Normally, you do not need to adjust this parameter. The default value is changed from `100ms` to `10ms`.

Configuration file	Configuration item	Change type	Description
PD	max-snapshot-count	Modified	Controls the maximum number of snapshots that a single store receives or sends at the same time. PD schedulers depend on this configuration to prevent the resources used for normal traffic from being preempted. The default value is changed from 3 to 64.

Configuration file	Configuration item	Change type	Description
PD	max-pending-peer-count	Modified	Controls the maximum number of pending peers in a single store. PD schedulers depend on this configuration to prevent too many Regions with outdated logs from being generated on some nodes. The default value is changed from 16 to 64.
TiD Lightning	meta-schema-name	Newly added	The schema name where the meta information for each TiDB Lightning instance is stored in the target cluster. The default value is "lightning_metadata".

16.11.5.1.3 Others

- Temporary tables:
  - If you have created local temporary tables in a TiDB cluster earlier than v5.3.0, these tables are actually ordinary tables, and handled as ordinary tables after the cluster is upgraded to v5.3.0 or a later version. If you have created global temporary tables in a TiDB cluster of v5.3.0 or a later version, when the cluster is downgraded to a version earlier than v5.3.0, these tables are handled as ordinary tables and cause a data error.
  - Since v5.3.0, TiCDC and BR support global temporary tables. If you use TiCDC and BR of a version earlier than v5.3.0 to replicate global temporary tables to the downstream, a table definition error occurs.
  - The following clusters are expected to be v5.3.0 or later; otherwise, data error is reported when you create a global temporary table:
    * the cluster to be imported using TiDB migration tools
    * the cluster restored using TiDB migration tools
    * the downstream cluster in a replication task using TiDB migration tools
  - For the compatibility information of temporary tables, refer to Compatibility with MySQL temporary tables and Compatibility restrictions with other TiDB features.

- For releases earlier than v5.3.0, TiDB reports an error when a system variable is set to an illegal value. For v5.3.0 and later releases, TiDB returns success with a warning such as "|Warning | 1292 | Truncated incorrect xxx: 'xx' " when a system variable is set to an illegal value.

- Fix the issue that the `SHOW VIEW` permission is not required to execute `SHOW CREATE VIEW`. Now you are expected to have the `SHOW VIEW` permission to execute the `SHOW CREATE VIEW` statement.

- The system variable `sql_auto_is_null` is added to the noop functions. When `tidb_enable_noop_functions = 0/OFF`, modifying this variable value causes an error.

- The `GRANT ALL ON performance_schema.*` syntax is no longer permitted. If you execute this statement in TiDB, an error occurs.

- Fix the issue that auto-analyze is unexpectedly triggered outside the specified time period when new indexes are added before v5.3.0. In v5.3.0, after you set the time period through the `tidb_auto_analyze_start_time` and `tidb_auto_analyze_end_time` variables, auto-analyze is triggered only during this time period.

- The default storage directory for plugins is changed from `""` to `/data/deploy/plugin`.

- The DM code is migrated to the folder "dm" in TiCDC code repository. Now DM follows TiDB in version numbers. Next to v2.0.x, the new DM version is v5.3.0, and you can upgrade from v2.0.x to v5.3.0 without any risk.

- The default deployed version of Prometheus is upgraded from v2.8.1 to v2.27.1, which is released in May 2021. This version provides more features and fixes a security issue. Compared with Prometheus v2.8.1, alert time representation in v2.27.1 is changed from Unix timestamp to UTC. For details, refer to Prometheus commit for more details.

16.11.5.2 New features

16.11.5.2.1 SQL

- **Use SQL interface to set placement rules for data (experimental feature)**

  Support the `[CREATE | ALTER] PLACEMENT POLICY` syntax that provides a SQL interface to set placement rules for data. Using this feature, you can specify tables and partitions to be scheduled to specific regions, data centers, racks, hosts, or replica count rules. This meets your application demands for lower cost and higher flexibility. The typical user scenarios are as follows:

  - Merge multiple databases of different applications to reduce the cost on database maintenance, and achieve application resource isolation through the rule configuration
  - Increase replica count for important data to improve the application availability and data reliability
  - Store new data into SSDs and store old data into HHDs to lower the cost on data archiving and storage
  - Schedule the leaders of hotspot data to high-performance TiKV instances
  - Separate cold data to lower-cost storage mediums to improve cost efficiency

  User document, #18030

- **Temporary tables**

  Support the `CREATE [GLOBAL] TEMPORARY TABLE` statement to create temporary tables. Using this feature, you can easily manage the temporary data generated in the calculation process of an application. Temporary data is stored in memory and you can use the `tidb_tmp_table_max_size` variable to limit the size of a temporary table. TiDB supports the following types of temporary tables:

  - Global temporary tables
    * Visible to all sessions in the cluster, and table schemas are persistent.
    * Provides transaction-level data isolation. The temporary data is effective only in the transaction. After the transaction finishes, the data is automatically dropped.
  - Local temporary tables
    * Visible only to the current session, and tables schemas are not persistent.

    * Supports duplicated table names. You do not need to design complicated naming rules for your application.
    * Provides session-level data isolation, which enables you to design a simpler application logic. After the transaction finishes, the temporary tables are dropped.

    User document, #24169

- **Support the `FOR UPDATE OF TABLES` syntax**

  For a SQL statement that joins multiple tables, TiDB supports acquiring pessimistic locks on the rows correlated to the tables that are included in `OF TABLES`.

  User document, #28689

- **Table attributes**

  Support the `ALTER TABLE [PARTITION] ATTRIBUTES` statement that allows you to set attributes for a table or partition. Currently, TiDB only supports setting the `merge_option` attribute. By adding this attribute, you can explicitly control the Region merge behavior.

  User scenarios: When you perform the `SPLIT TABLE` operation, if no data is inserted after a certain period of time (controlled by the PD parameter `split-merge-interval` ↪), the empty Regions are automatically merged by default. In this case, you can set the table attribute to `merge_option=deny` to avoid the automatic merging of Regions.

  User document, #3839

16.11.5.2.2 Security

- **Support creating users with the least privileges on TiDB Dashboard**

  The account system of TiDB Dashboard is consistent with that of TiDB SQL. Users accessing TiDB Dashboard are authenticated and authorized based on TiDB SQL users' privileges. Therefore, TiDB Dashboard requires limited privileges, or merely the read-only privilege. You can configure users to access TiDB Dashboard based on the principle of least privilege, thus avoiding access of high-privileged users.

  It is recommended that you create a least-privileged SQL user to access and sign in with TiDB Dashboard. This avoids access of high-privileged users and improves security.

  User document

16.11.5.2.3 Performance

- **Optimize the timestamp processing flow of PD**

  TiDB optimizes its timestamp processing flow and reduces the timestamp processing load of PD by enabling PD Follower Proxy and modifying the batch waiting time required when the PD client requests TSO in batches. This helps improve the overall scalability of the system.

– Support enabling or disabling PD Follower Proxy through the system variable `tidb_enable_tso_follower_proxy`. Suppose that the TSO requests load of PD is too high. In this case, enabling PD follower proxy can batch forward the TSO requests collected during the request cycle on followers to the leader nodes. This solution can effectively reduce the number of direct interactions between clients and leaders, reduce the pressure of the load on leaders, and improve the overall performance of TiDB.

> **Note:**
> When the number of clients is small and the PD leader CPU load is not full, it is NOT recommended to enable PD Follower Proxy.

– Support using the system variable `tidb_tso_client_batch_max_wait_time` to set the maximum waiting time needed for the PD client to batch request TSO. The unit of this time is milliseconds. In case that PD has a high TSO requests load, you can reduce the load and improve the throughput by increasing the waiting time to get a larger batch size.

> **Note:**
> When the TSO request load is not high, it is NOT recommended to modify this variable value.

User document, #3149

16.11.5.2.4 Stability

- **Support Online Unsafe Recovery after some stores are permanently damaged (experimental feature)**

  Support the `pd-ctl unsafe remove-failed-stores` command that performs online data unsafe recovery. Suppose that the majority of data replicas encounter issues like permanent damage (such as disk damage), and these issues cause the data ranges in an application to be unreadable or unwritable. In this case, you can use the Online Unsafe Recovery feature implemented in PD to recover the data, so that the data is readable or writable again.

  It is recommended to perform the feature-related operations with the support of the TiDB team.

  User document, #10483

16.11.5.2.5 Data migration

- **DM replication performance enhanced**

  Supports the following features to ensure lower-latency data replication from MySQL to TiDB:

  - Compact multiple updates on a single row into one statement
  - Merge batch updates of multiple rows into one statement

- **Add DM OpenAPI to better maintain DM clusters (experimental feature)**

  DM provides the OpenAPI feature for querying and operating the DM cluster. It is similar to the feature of dmctl tools.

  Currently, DM OpenAPI is an experimental feature and disabled by default. It is not recommended to use it in a production environment.

  User document

- **TiDB Lightning Parallel Import**

  TiDB Lightning provides parallel import capability to extend the original feature. It allows you to deploy multiple Lightning instances at the same time to import single tables or multiple tables to downstream TiDB in parallel. Without changing the way customers use it, it greatly improves the data migration ability, allowing you to migrate data in a more real-time way to further process, integrate and analyze them. It improves the efficiency of enterprise data management.

  In our test, using 10 TiDB Lightning instances, a total of 20 TiB MySQL data can be imported to TiDB within 8 hours. The performance of multiple table import is also improved. A single TiDB Lightning instance can support importing at 250 GiB/h, and the overall migration is 8 times faster than the original performance.

  User document

- **TiDB Lightning Prechecks**

  TiDB Lightning provides the ability to check the configuration before running a migration task. It is enabled by default. This feature automatically performs some routine checks for disk space and execution configuration. The main purpose is to ensure that the whole subsequent import process goes smoothly.

  User document

- **TiDB Lightning supports importing files of GBK character set**

  You can specify the character set of the source data file. TiDB Lightning will convert the source file from the specified character set to UTF-8 encoding during the import process.

  User document

- **Sync-diff-inspector improvement**

  - Improve the comparison speed from 375 MB/s to 700 MB/s
  - Reduce the memory consumption of TiDB nodes by nearly half during comparison
  - Optimize the user interface and display the progress bar during comparison

  User document

16.11.5.2.6 Diagnostic efficiency

- **Save and restore the on-site information of a cluster**

  When you locate and troubleshoot the issues of a TiDB cluster, you often need to provide information on the system and the query plan. To help you get the information and troubleshoot cluster issues in a more convenient and efficient way, the `PLAN REPLAYER` command is introduced in TiDB v5.3.0. This command enables you to easily save and restore the on-site information of a cluster, improves the efficiency of troubleshooting, and helps you more easily archive the issues for management.

  The features of `PLAN REPLAYER` are as follows:

  - Exports the information of a TiDB cluster at an on-site troubleshooting to a ZIP-formatted file for storage.
  - Imports into a cluster the ZIP-formatted file exported from another TiDB cluster. This file contains the information of the latter TiDB cluster at an on-site troubleshooting.

  User document, #26325

16.11.5.2.7 TiDB data share subscription

- **TiCDC Eventually Consistent Replication**

  TiCDC provides the eventually consistent replication capability in disaster scenarios. When a disaster occurs in the primary TiDB cluster and the service cannot be resumed in a short period of time, TiCDC needs to provide the ability to ensure the consistency of data in the secondary cluster. Meanwhile, TiCDC needs to allow the business to quickly switch the traffic to the secondary cluster to avoid the database being unavailable for a long time and affecting the business.

  This feature supports TiCDC to replicate incremental data from a TiDB cluster to the secondary relational database TiDB/Aurora/MySQL/MariaDB. In case the primary cluster crashes, TiCDC can recover the secondary cluster to a certain snapshot in the primary cluster within 5 minutes, given the condition that before disaster the replication status of TiCDC is normal and replication lag is small. It allows data loss of less than 30 minutes, that is, RTO <= 5min, and RPO <= 30min.

  User document

- **TiCDC supports the HTTP protocol OpenAPI for managing TiCDC tasks**

  Since TiDB v5.3.0, TiCDC OpenAPI becomes a General Availability (GA) feature. You can query and operate TiCDC clusters using OpenAPI in the production environment.

16.11.5.2.8 Deployment and maintenance

- **Continuous Profiling (experimental feature)**

  TiDB Dashboard supports the Continuous Profiling feature, which stores instance performance analysis results automatically in real time when TiDB clusters are running. You can check the performance analysis result in a flame graph, which is more observable and shortens troubleshooting time.

  This feature is disabled by default and needs to be enabled on the **Continuous Profile** page of TiDB Dashboard.

  This feature is only available for clusters upgraded or installed using TiUP v1.7.0 or above.

  User document

16.11.5.3 Telemetry

TiDB adds the information to the telemetry report about whether or not the TEMPORARY TABLE feature is used. This does not include table names or table data.

To learn more about telemetry and how to disable this behavior, refer to Telemetry.

16.11.5.4 Removed feature

Starting from TiCDC v5.3.0, the cyclic replication feature between TiDB clusters (an experimental feature in v5.0.0) has been removed. If you have already used this feature to replicate data before upgrading TiCDC, the related data is not affected after the upgrade.

16.11.5.5 Improvements

- TiDB
  - Show the affected SQL statements in the debug log when the coprocessor encounters a lock, which is helpful in diagnosing problems #27718
  - Support showing the size of the backup and restore data when backing up and restoring data in the SQL logical layer #27247
  - Improve the default collection logic of ANALYZE when `tidb_analyze_version` is `2`, which accelerates collection and reduces resource overhead
  - Introduce the `ANALYZE TABLE table_name COLUMNS col_1, col_2, ... , col_n` syntax. The syntax allows collecting statistics only on a portion of the columns in wide tables, which improves the speed of statistics collection

- TiKV
  - Enhance disk space protection to improve storage stability

    To solve the issue that TiKV might panic in case of a disk fully-written error, TiKV introduces a two-level threshold defense mechanism to protect the disk remaining space from being exhausted by excess traffic. Additionally, the mechanism provides the ability to reclaim space when the threshold is triggered. When the remaining space threshold is triggered, some write operations will fail and TiKV will return a disk full error as well as a list of disk full nodes. In this case, to recover the space and restore the service, you can execute `Drop/Truncate Table` or scale out the nodes.
  - Simplify the algorithm of L0 flow control #10879
  - Improve the error log report in the raft client module #10944
  - Improve logging threads to avoid them becoming a performance bottleneck #10841
  - Add more statistics types of write queries #10507
  - Reduce the write latency by separating I/O operations from Raftstore thread pool (disabled by default). For more information about tuning, see Tune TiKV Thread Pool Performance #10540
- PD
  - Add more types of write queries to QPS dimensions in the hotspot scheduler #3869
  - Support dynamically adjusting the retry limit of the Balance Region scheduler to improve the performance of the scheduler #3744
  - Update TiDB Dashboard to v2021.10.08.1 #4070
  - Support that the evict leader scheduler can schedule Regions with unhealthy peers #4093
  - Speed up the exit process of schedulers #4146
- TiFlash
  - Improve the execution efficiency of the TableScan operator greatly
  - Improve the execution efficiency of the Exchange operator
  - Reduce write amplification and memory usage during GC of the storage engine (experimental feature)
  - Improve the stability and availability of TiFlash when TiFlash restarts, which reduces possible query failures following the restart
  - Support pushing down multiple new String and Time functions to the MPP engine
    * String functions: LIKE pattern, FORMAT(), LOWER(), LTRIM(), RTRIM(), SUBSTRING_INDEX(), TRIM(), UCASE(), UPPER()

    * Mathematical functions: ROUND (decimal, int)
    * Date and time functions: HOUR(), MICROSECOND(), MINUTE(), SECOND(), SYSDATE()
    * Type conversion function: CAST(time, real)
    * Aggregation functions: GROUP_CONCAT(), SUM(enum)
  - Support 512-bit SIMD
  - Enhance the cleanup algorithm for outdated data to reduce disk usage and read files more efficiently
  - Fix the issue that dashboard does not display memory or CPU information in some non-Linux systems
  - Unify the naming style of TiFlash log files (keep the naming style consistent with that of TiKV) and support dynamic modification of logger.count and logger.size
  - Improve the data validation capability of column-based files (checksums, experimental feature)

- Tools

  - TiCDC

    * Reduce the default value of the Kafka sink configuration item `MaxMessageBytes` ↪ from 64 MB to 1 MB to fix the issue that large messages are rejected by the Kafka Broker #3104
    * Reduce memory usage in the replication pipeline #2553#3037 #2726
    * Optimize monitoring items and alert rules to improve observability of synchronous links, memory GC, and stock data scanning processes #2735 #1606 #3000 #2985 #2156
    * When the sync task status is normal, no more historical error messages are displayed to avoid misleading users #2242

16.11.5.6 Bug Fixes

- TiDB

  - Fix an error that occurs during execution caused by the wrong execution plan. The wrong execution plan is caused by the shallow copy of schema columns when pushing down the aggregation operators on partitioned tables #27797 #26554
  - Fix the issue that `plan cache` cannot detect changes of unsigned flags #28254
  - Fix the wrong partition pruning when the partition function is out of range #28233
  - Fix the issue that planner might cache invalid plans for `join` in some cases #28087
  - Fix wrong `IndexLookUpJoin` when hash column type is `enum` #27893
  - Fix a batch client bug that recycling idle connection might block sending requests in some rare cases #27688

- Fix the TiDB Lightning panic issue when it fails to perform checksum on a target cluster #27686
- Fix wrong results of the `date_add` and `date_sub` functions in some cases #27232
- Fix wrong results of the `hour` function in vectorized expression #28643
- Fix the authenticating issue when connecting to MySQL 5.1 or an older client version #27855
- Fix the issue that auto analyze might be triggered out of the specified time when a new index is added #28698
- Fix a bug that setting any session variable invalidates `tidb_snapshot` #28683
- Fix a bug that BR is not working for clusters with many missing-peer Regions #27534
- Fix the unexpected error like `tidb_cast to Int32 is not supported` when the unsupported `cast` is pushed down to TiFlash #23907
- Fix the issue that `DECIMAL overflow` is missing in the `%s value is out of range in '%s'` error message #27964
- Fix a bug that the availability detection of MPP node does not work in some corner cases #3118
- Fix the `DATA RACE` issue when assigning `MPP task ID` #27952
- Fix the `INDEX OUT OF RANGE` error for a MPP query after deleting an empty `dual table` #28250
- Fix the issue of false positive error log `invalid cop task execution summaries length` for MPP queries #1791
- Fix the issue of error log `cannot found column in Schema column` for MPP queries #28149
- Fix the issue that TiDB might panic when TiFlash is shuting down #28096
- Remove the support for insecure 3DES (Triple Data Encryption Algorithm) based TLS cipher suites #27859
- Fix the issue that Lightning connects to offline TiKV nodes during pre-check and causes import failures #27826
- Fix the issue that pre-check cost too much time when importing many files to tables #27605
- Fix the issue that rewriting expressions makes `between` infer wrong collation #27146
- Fix the issue that `group_concat` function did not consider the collation #27429
- Fix the result wrong that occurs when the argument of the `extract` function is a negative duration #27236
- Fix the issue that creating partition fails if `NO_UNSIGNED_SUBTRACTION` is set #26765
- Avoid expressions with side effects in column pruning and aggregation pushdown #27106
- Remove useless gRPC logs #24190
- Limit the valid decimal length to fix precision-related issues #3091
- Fix the issue of a wrong way to check for overflow in `plus` expression #26977
- Fix the issue of `data too long` error when dumping statistics from the table with `new collation` data #27024

  - Fix the issue that the retried transactions' statements are not included in `TIDB_TRX` #28670
  - Fix the wrong default value of the `plugin_dir` configuration #28084
  - Fix the issue that the `CONVERT_TZ` function returns `NULL` when it is given a named timezone and a UTC offset #8311
  - Fix the issue that `CREATE SCHEMA` does not use the character set specified by `character_set_server` and `collation_server` for new schemas if none are provided as part of the statement #27214

- TiKV

  - Fix the issue of unavailable TiKV caused by Raftstore deadlock when migrating Regions. The workaround is to disable the scheduling and restart the unavailable TiKV #10909
  - Fix the issue that CDC adds scan retries frequently due to the Congest error #11082
  - Fix the issue that the Raft connection is broken when the channel is full #11047
  - Fix the issue that batch messages are too large in Raft client implementation #9714
  - Fix the issue that some coroutines leak in `resolved_ts` #10965
  - Fix a panic issue that occurs to the coprocessor when the size of response exceeds 4 GiB #9012
  - Fix the issue that snapshot Garbage Collection (GC) misses GC snapshot files when snapshot files cannot be garbage collected #10813
  - Fix a panic issue caused by timeout when processing Coprocessor requests #10852
  - Fix a memory leak caused by monitoring data of statistics threads #11195
  - Fix a panic issue caused by getting the cgroup information from some platforms #10980
  - Fix the issue of poor scan performance because MVCC Deletion versions are not dropped by compaction filter GC #11248

- PD

  - Fix the issue that PD incorrectly delete the peers with data and in pending status because the number of peers exceeds the number of configured peers #4045
  - Fix the issue that PD does not fix down peers in time #4077
  - Fix the issue that the scatter range scheduler cannot schedule empty Regions #4118
  - Fix the issue that the key manager cost too much CPU #4071
  - Fix the data race issue that might occur when setting configurations of hot Region scheduler #4159
  - Fix slow leader election caused by stucked Region syncer #3936

- TiFlash

  - Fix the issue of inaccurate TiFlash Store Size statistics

  - Fix the issue that TiFlash fails to start up on some platforms due to the absence of library `nsl`
  - Block the infinite wait of `wait index` when writing pressure is heavy (a default timeout of 5 minutes is added), which prevents TiFlash from waiting too long for data replication to provide services
  - Fix the slow and no result issues of the log search when the log volume is large
  - Fix the issue that only the most recent logs can be searched when searching old historical logs
  - Fix the possible wrong result when a new collation is enabled
  - Fix the possible parsing errors when an SQL statement contains extremely long nested expressions
  - Fix the possible `Block schema mismatch` error of the Exchange operator
  - Fix the possible `Can't compare` error when comparing Decimal types
  - Fix the `3rd arguments of function substringUTF8 must be constants` error of the `left/substring` function

- Tools

  - TiCDC

    * Fix the issue that TiCDC replication task might terminate when the upstream TiDB instance unexpectedly exits #3061
    * Fix the issue that TiCDC process might panic when TiKV sends duplicate requests to the same Region #2386
    * Fix unnecessary CPU consumption when verifying downstream TiDB/MySQL availability #3073
    * Fix the issue that the volume of Kafka messages generated by TiCDC is not constrained by `max-message-size` #2962
    * Fix the issue that TiCDC sync task might pause when an error occurs during writing a Kafka message #2978
    * Fix the issue that some partitioned tables without valid indexes might be ignored when `force-replicate` is enabled #2834
    * Fix the issue that scanning stock data might fail due to TiKV performing GC when scanning stock data takes too long #2470
    * Fix a possible panic issue when encoding some types of columns into Open Protocol format #2758
    * Fix a possible panic issue when encoding some types of columns into Avro format #2648

  - TiDB Binlog

    * Fix the issue that when most tables are filtered out, checkpoint cannot be updated under some special load #1075

16.12 v5.2

16.12.1 TiDB 5.2.4 Release Notes

Release Date: April 26, 2022

TiDB version: 5.2.4

16.12.1.1 Compatibility change(s)

- TiDB
  - Change the default value of the system variable `tidb_analyze_version` from `2` to `1` #31748
- TiKV
  - Add `raft-log-compact-sync-interval` to control the time interval (`"2s"` by default) to compact unnecessary Raft logs #11404
  - Change the default value of `raft-log-gc-tick-interval` from `"10s"` to `"3s"` #11404
  - When `storage.flow-control.enable` is set to `true`, the value of `storage.flow-control.hard-pending-compaction-bytes-limit` overwrites that of `rocksdb.(defaultcf|writecf|lockcf).hard-pending-compaction-bytes-limit` #11424
- Tools
  - TiDB Lightning
    * Change the default value of `regionMaxKeyCount` from 1_440_000 to 1_280_000, to avoid too many empty Regions after data import #30018

16.12.1.2 Improvements

- TiKV
  - Transfer the leadership to CDC observer to reduce latency jitter #12111
  - Reduce the TiCDC recovery time by reducing the number of the Regions that require the Resolve Locks step #11993
  - Update the proc filesystem (procfs) to v0.12.0 #11702
  - Speed up the Garbage Collection (GC) process by increasing the write batch size when performing GC to Raft logs #11404
  - Increase the speed of inserting SST files by moving the verification process to the `Import` thread pool from the `Apply` thread pool #11239

- Tools
  - TiCDC
    * Change the default value of Kafka Sink `partition-num` to 3 so that TiCDC distributes messages across Kafka partitions more evenly #3337
    * Reduce the time for the KV client to recover when a TiKV store is down #3191
    * Add a `Lag analyze` panel in Grafana #4891
    * Expose configuration parameters of the Kafka producer to make them configurable in TiCDC #4385
    * Add the exponential backoff mechanism for restarting a changefeed #3329
    * Reduce the count of "EventFeed retry rate limited" logs #4006
    * Set the default value of `max-message-bytes` to 10M #4041
    * Add more Prometheus and Grafana monitoring metrics and alerts, including `no owner alert`, `mounter row`, `table sink total row`, and `buffer sink total row` #4054 #1606
    * Support multiple Kubernetes clusters in Grafana dashboards #4665
    * Add catch-up ETA (Estimated Time of Arrival) to the `changefeed checkpoint` monitoring metric #5232

16.12.1.3 Bug fixes

- TiDB
  - Fix wrong range calculation results for Nulleq function on Enum values #32428
  - Fix the issue that INDEX HASH JOIN returns the `send on closed channel` error #31129
  - Fix the issue that concurrent column type change causes inconsistency between the schema and the data #31048
  - Fix the issue of potential data index inconsistency in optimistic transaction mode #30410
  - Fix the issue that a SQL operation is canceled when its JSON type column joins its `CHAR` type column #29401
  - Fix the issue that window functions might return different results when using a transaction or not #29947
  - Fix the issue that the `Column 'col_name' in field list is ambiguous` error is reported unexpectedly when a SQL statement contains natural join #25041
  - Fix the issue that the length information is wrong when casting `Decimal` to `String` #29417
  - Fix the issue that the `GREATEST` function returns inconsistent results due to different values of `tidb_enable_vectorized_expression` (set to `on` or `off`) #29434
  - Fix wrong results of deleting data of multiple tables using `left join` #31321
  - Fix a bug that TiDB may dispatch duplicate tasks to TiFlash #32814
  - Fix the MPP task list empty error when executing a query #31636

- Fix wrong results of index join caused by an innerWorker panic #31494
- Fix the issue that executing the `INSERT ... SELECT ... ON DUPLICATE KEY UPDATE` statement gets panic #28078
- Fix wrong query results due to the optimization of `Order By` #30271
- Fix the wrong result that might occur when performing `JOIN` on `ENUM` type columns #27831
- Fix the panic when using the `CASE WHEN` function on the `ENUM` data type #29357
- Fix wrong results of the `microsecond` function in vectorized expressions #29244
- Fix the issue that the window function causes TiDB to panic instead of reporting an error #30326
- Fix the issue that the Merge Join operator gets wrong results in certain cases #33042
- Fix the issue that TiDB gets a wrong result when a correlated subquery returns a constant #32089
- Fix the issue that TiDB writes wrong data due to the wrong encoding of the `ENUM` or `SET` column #32302
- Fix the issue that the `MAX` or `MIN` function on the `ENUM` or `SET` column returns a wrong result when the new collation is enabled in TiDB #31638
- Fix the issue that the IndexHashJoin operator does not exit successfully #31062
- Fix the issue that TiDB might read wrong data when a table has a virtual column #30965
- Fix the issue that the setting of the log level does not take effect on the slow query log #30309
- Fix the issue that partitioned tables cannot fully use indexes to scan data in some cases #33966
- Fix the issue that the background HTTP service of TiDB might not exit successfully and makes the cluster in an abnormal state #30571
- Fix the issue that TiDB might unexpectedly output many logs of failed authentication #29709
- Fix the issue that the system variable `max_allowed_packet` does not take effect #31422
- Fix the issue that the `REPLACE` statement incorrectly changes other rows when the auto ID is out of range #29483
- Fix the issue that the slow query log cannot output log normally and might consume too much memory #32656
- Fix the issue that the result of NATURAL JOIN might include unexpected columns #24981
- Fix the issue that using `ORDER BY` and `LIMIT` together in one statement might output wrong results if a prefix-column index is used to query data #29711
- Fix the issue that the DOUBLE type auto-increment column might be changed when the optimistic transaction retries #29892
- Fix the issue that the STR_TO_DATE function cannot handle the preceding zero of the microsecond part correctly #30078
- Fix the issue that TiDB gets the wrong result when using TiFlash to scan tables with empty range although TiFlash does not support reading tables with empty

range yet #33083

- TiKV
  - Fix a bug that stale messages cause TiKV to panic #12023
  - Fix the issue of intermittent packet loss and out of memory (OOM) caused by the overflow of memory metrics #12160
  - Fix the potential panic issue that occurs when TiKV performs profiling on Ubuntu 18.04 #9765
  - Fix the issue that tikv-ctl returns an incorrect result due to its wrong string match #12329
  - Fix a bug that replica reads might violate the linearizability #12109
  - Fix a bug that TiKV might panic if it has been running for 2 years or more #11940
  - Fix the issue of QPS drop when flow control is enabled and `level0_slowdown_trigger` is set explicitly #11424
  - Fix the panic issue that occurs when the cgroup controller is not mounted #11569
  - Fix possible metadata corruption caused by Region merge on a lagging Region peer #11526
  - Fix the issue that the latency of Resolved TS increases after TiKV stops operating #11351
  - Fix a panic issue that occurs when Region merge, ConfChange, and Snapshot happen at the same time in extreme conditions #11475
  - Fix a bug that tikv-ctl cannot return the correct Region-related information #11393
  - Fix the issue of negative sign when the decimal divide result is zero #29586
  - Fix the issue that retrying prewrite requests in the pessimistic transaction mode might cause the risk of data inconsistency in rare cases #11187
  - Fix a memory leak caused by monitoring data of statistics threads #11195
  - Fix the issue that the average latency of the by-instance gRPC requests is inaccurate in TiKV metrics #11299
  - Fix the panic issue caused by deleting snapshot files when the peer status is `Applying` #11746
  - Fix a bug that TiKV cannot delete a range of data (which means the internal command `unsafe_destroy_range` is executed) when the GC worker is busy #11903
  - Fix the issue that deleting an uninitialized replica might cause an old replica to be recreated #10533
  - Fix the issue that TiKV cannot detect the memory lock when TiKV performs a reverse table scan #11440
  - Fix the deadlock issue that happens occasionally when coroutines run too fast #11549
  - Fix the issue that destroying a peer might cause high latency #10210
  - Fix the issue that TiKV panics and destroys peers unexpectedly because the target Region to be merged is invalid #12232

  - Fix the TiKV panic issue that occurs when the target peer is replaced with the peer that is destroyed without being initialized when merging a Region #12048
  - Fix the TiKV panic issue that occurs when applying snapshot is aborted #11618
  - Fix a bug that TiKV cannot correctly calculate the number of snapshots being sent when the operator execution fails #11341

- PD

  - Fix the issue that the Region scatterer scheduling lost some peers #4565
  - Fix the issue that the cold hotspot data cannot be deleted from the hotspot statistics #4390

- TiFlash

  - Fix a bug that MPP tasks might leak threads forever #4238
  - Fix the issue that the result of `IN` is incorrect in multi-value expressions #4016
  - Fix the issue that the date format identifies `'\n'` as an invalid separator #4036
  - Fix the potential query error after adding columns under heavy read workload #3967
  - Fix the bug that invalid storage directory configurations lead to unexpected behaviors #4093
  - Fix the bug that some exceptions are not handled properly #4101
  - Fix the bug that the `STR_TO_DATE()` function incorrectly handles leading zeros when parsing microseconds #3557
  - Fix the issue that casting `INT` to `DECIMAL` might cause overflow #3920
  - Fix the wrong result that occurs when casting `DATETIME` to `DECIMAL` #4151
  - Fix the overflow that occurs when casting `FLOAT` to `DECIMAL` #3998
  - Fix the issue that the `CastStringAsReal` behavior is inconsistent in TiFlash and in TiDB or TiKV #3475
  - Fix the issue that the `CastStringAsDecimal` behavior is inconsistent in TiFlash and in TiDB or TiKV #3619
  - Fix the issue that TiFlash might return the `EstablishMPPConnection` error after it is restarted #3615
  - Fix the issue that obsolete data cannot be reclaimed after setting the number of TiFlash replicas to 0 #3659
  - Fix potential data inconsistency when widening the primary key column with the primary key being `handle` #3569
  - Fix possible parsing errors when an SQL statement contains extremely long nested expressions #3354
  - Fix possible wrong results when a query contains the `where <string>` clause #3447
  - Fix possible wrong results when `new_collations_enabled_on_first_bootstrap` ↪ is enabled #3388, #3391
  - Fix the panic issue that occurs when TLS is enabled #4196
  - Fix the panic issue that occurs when the memory limit is enabled #3902

  - Fix the issue that TiFlash crashes occasionally when an MPP query is stopped #3401
  - Fix the unexpected error of `Unexpected type of column: Nullable(Nothing)` #3351
  - Fix possible metadata corruption caused by Region merge on a lagging Region peer #4437
  - Fix the issue that a query containing `JOIN` might be hung if an error occurs #4195
  - Fix possible wrong results returned for MPP queries due to incorrect execution plans #3389

- Tools

  - Backup & Restore (BR)

    * Fix the issue that BR fails to back up RawKV #32607

  - TiCDC

    * Fix the issue that default values cannot be replicated #3793
    * Fix a bug that sequence is incorrectly replicated in some cases #4563
    * Fix a bug that a TiCDC node exits abnormally when a PD leader is killed #4248
    * Fix a bug that MySQL sink generates duplicated `replace` SQL statements when `batch-replace-enable` is disabled #4501
    * Fix the issue of panic and data inconsistency that occurs when outputting the default column value #3929
    * Fix the issue that `mq sink write row` does not have monitoring data #3431
    * Fix the issue that replication cannot be performed when `min.insync.replicas` is smaller than `replication-factor` #3994
    * Fix the potential panic issue that occurs when a replication task is removed #3128
    * Fix the bug that HTTP API panics when the required processor information does not exist #3840
    * Fix the issue of potential data loss caused by inaccurate checkpoint #3545
    * Fix the potential issue that the deadlock causes a replication task to get stuck #4055
    * Fix the TiCDC panic issue that occurs when manually cleaning the task status in etcd #2980
    * Fix the issue that special comments in DDL statements cause the replication task to stop #3755
    * Fix the issue of replication stop caused by the incorrect configuration of `config.Metadata.Timeout` #3352
    * Fix the issue that the service cannot be started because of a timezone issue in the RHEL release #3584
    * Fix the issue that `stopped` changefeeds resume automatically after a cluster upgrade #3473

    * Fix the issue of overly frequent warnings caused by MySQL sink deadlock #2706
    * Fix the bug that the `enable-old-value` configuration item is not automatically set to `true` on Canal and Maxwell protocols #3676
    * Fix the issue that Avro sink does not support parsing JSON type columns #3624
    * Fix the negative value error in the changefeed checkpoint lag #3010
    * Fix the OOM issue in the container environment #1798
    * Fix the memory leak issue after processing DDLs #3174
    * Fix the issue that changefeed gets stuck when tables are repeatedly scheduled in the same node #4464
    * Fix a bug that querying status through open API may be blocked when the PD node is abnormal #4778
    * Fix incorrect metrics caused by owner changes #4774
    * Fix a stability problem in workerpool used by Unified Sorter #4447
    * Fix the issue that the `cached region` monitoring metric is negative #4300
  - TiDB Lightning
    * Fix the issue of wrong import result that occurs when TiDB Lightning does not have the privilege to access the `mysql.tidb` table #31088
    * Fix the checksum error "GC life time is shorter than transaction duration" #32733
    * Fix a bug that TiDB Lightning may not delete the metadata schema when some import tasks do not contain source files #28144
    * Fix the issue that TiDB Lightning does not report errors when the S3 storage path does not exist #28031 #30709
    * Fix an error that occurs when iterating more than 1000 keys on GCS #30377

16.12.2 TiDB 5.2.3 Release Note

Release date: December 3, 2021

TiDB version: 5.2.3

16.12.2.1 Bug fix

- TiKV
  - Fix the issue that the `GcKeys` task does not work when it is called by multiple keys. Caused by this issue, compaction filter GC might not drop the MVCC deletion information. #11217

16.12.3 TiDB 5.2.2 Release Notes

Release Date: October 29, 2021

TiDB version: 5.2.2

16.12.3.1 Improvements

- TiDB
  - Show the affected SQL statements in the debug log when the coprocessor encounters a lock, which is helpful in diagnosing problems #27718
  - Support showing the size of the backup and restore data when backing up and restoring data in the SQL logical layer #27247
- TiKV
  - Simplify the algorithm of L0 flow control #10879
  - Improve the error log report in the raft client module #10983
  - Improve logging threads to avoid them becoming a performance bottleneck #10841
  - Add more statistics types of write queries #10507
- PD
  - Add more types of write queries to QPS dimensions in the hotspot scheduler #3869
  - Support dynamically adjusting the retry limit of the balance region scheduler to improve the performance of the scheduler #3744
  - Update TiDB Dashboard to v2021.10.08.1 #4070
  - Support that the evict leader scheduler can schedule regions with unhealthy peers #4093
  - Speed up the exit process of schedulers #4146
- Tools
  - TiCDC
    * Reduce the default value of the Kafka sink configuration item `MaxMessageBytes` ↪ from 64 MB to 1 MB to fix the issue that large messages are rejected by the Kafka Broker #3104
    * Reduce memory usage in the relpication pipeline #2553#3037 #2726
    * Optimize monitoring items and alert rules to improve observability of synchronous links, memory GC, and stock data scanning processes #2735 #1606 #3000 #2985 #2156
    * When the sync task status is normal, no more historical error messages are displayed to avoid misleading users #2242

16.12.3.2 Bug Fixes

- TiDB
  - Fix the issue that plan-cache cannot detect changes of unsigned flags #28254
  - Fix the wrong partition pruning when the partition function is out of range #28233
  - Fix the issue that planner might cache invalid plans for `join` in some cases #28087
  - Fix wrong index hash join when hash column type is enum #27893
  - Fix a batch client bug that recycling idle connection might block sending requests in some rare cases #27688
  - Fix the TiDB Lightning panic issue when it fails to perform checksum on a target cluster #27686
  - Fix wrong results of the `date_add` and `date_sub` functions in some cases #27232
  - Fix wrong results of the `hour` function in vectorized expression #28643
  - Fix the authenticating issue when connecting to MySQL 5.1 or an older client version #27855
  - Fix the issue that auto analyze might be triggered out of the specified time when a new index is added #28698
  - Fix a bug that setting any session variable invalidates `tidb_snapshot` #28683
  - Fix a bug that BR is not working for clusters with many missing-peer regions #27534
  - Fix the unexpected error like `tidb_cast to Int32 is not supported` when the unsupported `cast` is pushed down to TiFlash #23907
  - Fix the issue that `DECIMAL overflow` is missing in the `%s value is out of range in '%s'` error message #27964
  - Fix a bug that the availability detection of MPP node does not work in some corner cases #3118
  - Fix the `DATA RACE` issue when assigning `MPP task ID` #27952
  - Fix the `INDEX OUT OF RANGE` error for a MPP query after deleting an empty `dual table`. #28250
  - Fix the issue of false positive error log `invalid cop task execution summaries length` for MPP queries #1791
  - Fix the issue of error log `cannot found column in Schema column` for MPP queries #28149
  - Fix the issue that TiDB might panic when TiFlash is shuting down #28096
  - Remove the support for insecure 3DES (Triple Data Encryption Algorithm) based TLS cipher suites #27859
  - Fix the issue that Lightning connects to offline TiKV nodes during pre-check and causes import failures #27826
  - Fix the issue that pre-check cost too much time when importing many files to tables #27605
  - Fix the issue that rewriting expressions makes `between` infer wrong collation #27146
  - Fix the issue that `group_concat` function did not consider the collation #27429

  - Fix the result wrong that occurs when the argument of the `extract` function is a negative duration #27236
  - Fix the issue that creating partition fails if `NO_UNSIGNED_SUBTRACTION` is set #26765
  - Avoid expressions with side effects in column pruning and aggregation pushdown #27106
  - Remove useless gRPC logs #24190
  - Limit the valid decimal length to fix precision-related issues #3091
  - Fix the issue of a wrong way to check for overflow in `plus` expression #26977
  - Fix the issue of `data too long` error when dumping statistics from the table with `new collation` data #27024
  - Fix the issue that the retried transactions' statements are not included in `TIDB_TRX` #28670

- TiKV

  - Fix the issue that CDC adds scan retries frequently due to the Congest error #11082
  - Fix the issue that the raft connection is broken when the channel is full #11047
  - Fix the issue that batch messages are too large in Raft client implementation #9714
  - Fix the issue that some coroutines leak in `resolved_ts` #10965
  - Fix a panic issue that occurs to the coprocessor when the size of response exceeds 4 GiB #9012
  - Fix the issue that snapshot Garbage Collection (GC) misses GC snapshot files when snapshot files cannot be garbage collected #10813
  - Fix a panic issue caused by timeout when processing Coprocessor requests #10852

- PD

  - Fix the issue that PD incorrectly delete the peers with data and in pending status because the number of peers exceeds the number of configured peers #4045
  - Fix the issue that PD does not fix down peers in time #4077
  - Fix the issue that the scatter range scheduler cannot schedule empty regions #4118
  - Fix the issue that the key manager cost too much CPU #4071
  - Fix the data race issue that might occur when setting configurations of hot region scheduler #4159
  - Fix slow leader election caused by stuck region syncer#3936

- TiFlash

  - Fix the issue that TiFlash fails to start up on some platforms due to the absence of library `nsl`

- Tools

- TiCDC
  * Fix the issue that TiCDC replication task might terminate when the upstream TiDB instance unexpectedly exits #3061
  * Fix the issue that TiCDC process might panic when TiKV sends duplicate requests to the same Region #2386
  * Fix unnecessary CPU consumption when verifying downstream TiDB/MySQL availability #3073
  * Fix the issue that the volume of Kafka messages generated by TiCDC is not constrained by `max-message-size` #2962
  * Fix the issue that TiCDC sync task might pause when an error occurs during writing a Kafka message #2978
  * Fix the issue that some partitioned tables without valid indexes might be ignored when `force-replicate` is enabled #2834
  * Fix the issue that scanning stock data might fail due to TiKV performing GC when scanning stock data takes too long #2470
  * Fix a possible panic issue when encoding some types of columns into Open Protocol format #2758
  * Fix a possible panic issue when encoding some types of columns into Avro format #2648
- TiDB Binlog
  * Fix the issue that when most tables are filtered out, checkpoint cannot be updated under some special load #1075

16.12.4 TiDB 5.2.1 Release Notes

Release date: September 9, 2021

TiDB version: 5.2.1

16.12.4.1 Bug fixes

- TiDB
  - Fix an error that occurs during execution caused by the wrong execution plan. The wrong execution plan is caused by the shallow copy of schema columns when pushing down the aggregation operators on partitioned tables. #27797 #26554
- TiKV
  - Fix the issue of unavailable TiKV caused by Raftstore deadlock when migrating Regions. The workaround is to disable the scheduling and restart the unavailable TiKV. #10909

16.12.5 TiDB 5.2 Release Notes

Release date: August 27, 2021

TiDB version: 5.2.0

> **Warning:**
>
> Some known issues are found in this version, and these issues are fixed in new versions. It is recommended that you use the latest 5.2.x version.

In v5.2, the key new features and improvements are as follows:

- Support using several functions in expression indexes to greatly improve query performance
- Improve the accuracy of optimizer cardinality estimation to help to select optimal execution plans
- Announce the general availability (GA) for the Lock View feature to observe transaction locking events and troubleshoot deadlock problems
- Add the TiFlash I/O traffic limit feature to improve the stability of read and write for TiFlash
- TiKV introduces a new flow control mechanism to replace the previous RocksDB write stall mechanism to improve the stability of TiKV flow control
- Simplify the operation and maintenance of Data Migration (DM) to reduce the management cost.
- TiCDC supports HTTP protocol OpenAPI to manage TiCDC tasks. It provides a more user-friendly operation method for both Kubernetes and on-premises environments. (Experimental feature)

16.12.5.1 Compatibility changes

> **Note:**
>
> When upgrading from an earlier TiDB version to v5.2, if you want to know the compatibility change notes of all intermediate versions, you can check the Release Note for the corresponding version.

16.12.5.1.1 System variables

Variable name	Change type	Description
default_authentication_plugin	Newly added	Sets the authentication method that the server advertises. The default value is mysql_native_password.
tidb_enable_auto_increment_in_generated	Newly added	Determines whether to include the AUTO_INCREMENT columns when creating a generated column or an expression index. The default value is OFF.
tidb_opt_enable_correlation_adjustment	Newly added	Controls whether the optimizer estimates the number of rows based on column order correlation. The default value is ON.

Variable name	Change type	Description
tidb_opt_limit_push_down_threshold ↪	Newly added	Sets the threshold that determines whether to push the Limit or TopN operator down to TiKV. The default value is 100.
tidb_stmt_summary_max_stmt_count ↪	Modified	Sets the maximum number of statements that the statement summary tables store in memory. The default value is changed from 200 to 3000.
tidb_enable_streaming ↪	Deprecated	The system variable enable-streaming ↪ is deprecated and it is not recommended to use it any more.

16.12.5.1.2 Configuration file parameters

Configuration file	Configuration item	Change type	Description
TiDB configuration file	`pessimistic-txn.deadlock-history-collect-retryable`	Newly added	Controls whether the `INFORMATION_SCHEMA.DEADLOCKS` table collects retryable deadlock error messages or not.
TiDB configuration file	`security.auto-tls`	Newly added	Determines whether to automatically generate the TLS certificates on startup. The default value is `false`.
TiDB configuration file	`stmt-summary.max-stmt-count`	Modified	Indicates the maximum number of SQL categories allowed to be saved in the statement summary tables. The default value is changed from 200 to 3000.

Configuration file	Configuration item	Change type	Description
TiDB configuration file	`experimental.allow-expression-index`	Deprecated	The `allow-expression-index` configuration in the TiDB configuration file is deprecated.
TiKV configuration file	`raftstore.cmd-batch`	Newly added	Controls whether to enable batch processing of the requests. When it is enabled, the write performance is significantly improved. The default value is `true`.

Configuration file	Configuration item	Change type	Description
TiKV configuration file	`raftstore.` ↪ `inspect` ↪ `-` ↪ `interval` ↪	Newly added	At a certain interval, TiKV inspects the latency of the Raftstore component. This configuration item specifies the interval of the inspection. If the latency exceeds this value, this inspection is marked as timeout. The default value is `500ms`.
TiKV configuration file	`raftstore.` ↪ `max-` ↪ `peer-` ↪ `down-` ↪ `duration` ↪	Modified	Indicates the longest inactive duration allowed for a peer. A peer with timeout is marked as `down`, and PD tries to delete it later. The default value is changed from `5m` to `10m`.

Configuration file	Configuration item	Change type	Description
TiKV configuration file	`server.raft-client-queue-size`	Newly added	Specifies the queue size of the Raft messages in TiKV. The default value is `8192`.
TiKV configuration file	`storage.flow-control.enable`	Newly added	Determines whether to enable the flow control mechanism. The default value is `true`.
TiKV configuration file	`storage.flow-control.memtables-threshold`	Newly added	When the number of kvDB memtables reaches this threshold, the flow control mechanism starts to work. The default value is `5`.
TiKV configuration file	`storage.flow-control.l0-files-threshold`	Newly added	When the number of kvDB L0 files reaches this threshold, the flow control mechanism starts to work. The default value is `9`.

Configuration file	Configuration item	Change type	Description
TiKV configuration file	storage. ↪ flow- ↪ control ↪ .soft- ↪ pending ↪ - ↪ compaction ↪ -bytes- ↪ limit	Newly added	When the pending compaction bytes in KvDB reach this threshold, the flow control mechanism starts to reject some write requests and reports the ServerIsBusy ↪ error. The default value is "192GB".
TiKV configuration file	storage. ↪ flow- ↪ control ↪ .hard- ↪ pending ↪ - ↪ compaction ↪ -bytes- ↪ limit	Newly added	When the pending compaction bytes in KvDB reach this threshold, the flow control mechanism rejects all write requests and reports the ServerIsBusy ↪ error. The default value is "1024GB".

16.12.5.1.3 Others

- Before the upgrade, check whether the value of the `tidb_evolve_plan_baselines` system variable is `ON`. If the value is `ON`, set it to `OFF`; otherwise, the upgrade will fail.
- For TiDB clusters upgraded from v4.0 to v5.2, the default value of `tidb_multi_statement_mode` ↪ changes from `WARN` to `OFF`.
- Before the upgrade, check the value of the TiDB configuration `feedback-probability` ↪ . If the value is not `0`, the "panic in the recoverable goroutine" error will occur after the upgrade, but this error does not affect the upgrade.
- TiDB is now compatible with MySQL 5.7's noop variable `innodb_default_row_format` ↪ . Setting this variable has no effect. #23541
- Starting from TiDB 5.2, to improve system security, it is recommended (but not mandatory) to encrypt the transport layer for connections from clients. TiDB provides the Auto TLS feature to automatically configure and enable encryption in TiDB. To use the Auto TLS feature, before the TiDB upgrade, set `security.auto-tls` in the TiDB configuration file to `true`.
- Support the `caching_sha2_password` authentication method to make migration from MySQL 8.0 easier and to improve security.

16.12.5.2 New features

16.12.5.2.1 SQL

- **Support using several functions in expression indexes**

  The expression index is a type of special index that can be created on an expression. After an expression index is created, TiDB supports expression-based queries, which greatly improves query performance.

  User document, #25150

- **Support the `translate` function in Oracle**

  The `translate` function replaces all occurrences of characters by other characters in a string. In TiDB, this function does not treat empty strings as `NULL` as Oracle does.

  User document

- **Support spilling HashAgg**

  Support spilling HashAgg into disk. When a SQL statement that includes an HashAgg operator causes out of memory (OOM), you can try to set the concurrency of this operator to `1` to trigger disk spill, which alleviates memory stress.

  User document, #25882

- **Improve the accuracy of optimizer cardinality estimation**

  - Improve the accuracy of TiDB's estimation of TopN/Limit. For example, for pagination queries on a large table that contain the `order by col limit x` condition, TiDB can more easily select the right index and reduce query response time.

  - Improve the accuracy of out-of-range estimation. For example, even if the statistics for a day have not been updated, TiDB can accurately select the corresponding index for a query that contains `where date=Now()`.
  - Introduce the `tidb_opt_limit_push_down_threshold` variable to control the optimizer's behavior of pushing down Limit/TopN, which resolves the issue that Limit/TopN cannot be pushed down in some situations due to wrong estimation.

  User document, #26085

- **Improve index selection of the optimizer**

  Add pruning rules for index selection. Before using the statistics for comparison, TiDB uses these rules to narrow down the scope of possible indexes to be selected, which reduces the possibility of selecting non-optimal indexes.

  User document

16.12.5.2.2 Transaction

- **General availability (GA) for Lock View**

  The Lock View feature provides more information about lock conflicts and lock waits of pessimistic locks, which helps DBAs to observe transaction locking events and troubleshoot deadlock problems.

  In v5.2, the following enhancements are made to Lock View:

  - In addition to the SQL digest column in the Lock View-related tables, add a column to these tables that shows the corresponding normalized SQL text. You do not have to manually query the statement corresponding to a SQL digest.
  - Add the `TIDB_DECODE_SQL_DIGESTS` function to query the normalized SQL statements (a form without formats and arguments) corresponding to a set of SQL digests in the cluster. This simplifies the operation of querying the statements that have been historically executed by a transaction.
  - Add a column in the `DATA_LOCK_WAITS` and `DEADLOCKS` system tables to show the table name, row ID, index value, and other key information interpreted from a key. This simplifies the operations such as locating the table to which a key belongs and interpreting the key information.
  - Support collecting the information of retryable deadlock errors in the `DEADLOCKS` table, which makes it easier to troubleshoot issues caused by such errors. The error collection is disabled by default and can be enabled using the `pessimistic-txn.deadlock-history-collect-retryable` configuration.
  - Support distinguishing query-executing transactions from idle transactions on the `TIDB_TRX` system table. The `Normal` state is now divided into `Running` and `Idle` states.

User documents:

```
- View the pessimistic lock-waiting events that are occurring on all TiKV
    ↪ nodes in the cluster: [`DATA_LOCK_WAITS`](#data_lock_waits)
- View the deadlock errors recently occurred on a TiDB node: [`DEADLOCKS`](#
    ↪ deadlocks)
- View the executing transaction on a TiDB node: [`TIDB_TRX`](#tidb_trx)
```

- Optimize the user scenarios of adding indexes on tables with the `AUTO_RANDOM` or `SHARD_ROW_ID_BITS` attribute.

16.12.5.2.3 Stability

- **Add TiFlash I/O traffic limit**

  This new feature is suitable for cloud storage with disk bandwidth of a small and specific size. It is disabled by default.

  TiFlash I/O Rate Limiter provides a new mechanism to avoid excessive race for I/O resources between read and write tasks. It balances the responses to read and write tasks, and limits the rate automatically according to read/write workload.

  User document

- **Improve stability of TiKV flow control**

  TiKV introduces a new flow control mechanism to replace the previous RocksDB write stall mechanism. Compared with the write stall mechanism, this new mechanism reduces the impact on the stability of foreground write.

  In specific, when the stress of RocksDB compaction accumulates, flow control is performed at the TiKV scheduler layer instead of the RocksDB layer, to avoid the following issues:

  - Raftstore is stuck, which is caused by RocksDB write stall.
  - Raft election times out, and the node leader is transferred as a result.

  This new mechanism improves the flow control algorithm to mitigate QPS decrease when the write traffic is high.

  User document, #10137

- **Detect and recover automatically from impact caused by a single slow TiKV node in a cluster**

  TiKV introduces the slow node detection mechanism. This mechanism calculates a score by inspecting the rate of TiKV Raftstore, and then reports the score to PD through store heartbeats. Meanwhile, it adds the `evict-slow-store-scheduler` scheduler on PD to automatically evict the leader on a single slow TiKV node. In this way, the impact on the whole cluster is mitigated. At the same time, more alert items about slow nodes are introduced to help you quickly pinpoint and solve problems.

  User document, #10539

16.12.5.2.4 Data Migration

- **Simplify operations of Data Migration (DM)**

  DM v2.0.6 can automatically identify the change event (failover or plan change) of the data source using VIP, and can automatically connect to a new data source instance, to reduce data replication latency and simplify operation procedures.

- TiDB Lightning supports customized line terminators in the CSV data, and is compatible with the MySQL LOAD DATA CSV data formats. You can then use TiDB Lightning directly in your data flow architecture.

  #1297

16.12.5.2.5 TiDB data share subscription

TiCDC supports using the HTTP protocol (OpenAPI) to manage TiCDC tasks, which is a more user-friendly operation method for both Kubernetes and on-premises environments. (Experimental feature)

#2411

16.12.5.2.6 Deployment and operations

Support running the `tiup playground` command on Mac computers with Apple M1 chips.

16.12.5.3 Feature Enhancements

- Tools
  - TiCDC
    * Add the binary MQ format designed for TiDB. It is more compact than the open protocols based on JSON #1621
    * Remove support for file sorter #2114
    * Support log rotation configurations #2182
  - TiDB Lightning
    * Support customized line terminators (except `\r` and `\n`) #1297
    * Support expression index and the index that depends on virtual generated columns #1407
  - Dumpling
    * Support backing up MySQL compatible databases but does not support `START TRANSACTION ... WITH CONSISTENT SNAPSHOT` or`SHOW CREATE TABLE` #311

16.12.5.4 Improvements

- TiDB
  - Support pushing down the built-in function `json_unquote()` to TiKV #24415
  - Support removing the `union` branch from the dual table #25614
  - Optimize the aggregate operator's cost factor #25241
  - Allow the MPP outer join to choose the build table based on the table row count #25142
  - Support balancing the MPP query workload among different TiFlash nodes based on Regions #24724
  - Support invalidating stale Regions in the cache after the MPP query is executed #24432
  - Improve the MySQL compatibility of the built-in function`str_to_date` for the format specifiers `%b/%M/%r/%T` #25767
  - Fix the issue that inconsistent binding caches might be created in multiple TiDB after recreating different bindings for the same query #26015
  - Fix the issue that the existing bindings cannot be loaded into cache after upgrade #23295
  - Support ordering the result of `SHOW BINDINGS` by (`original_sql`, `update_time`) #26139
  - Improve the logic of query optimization when bindings exist, and reduce optimization times of a query #26141
  - Support completing the garbage collection automatically for the bindings in the "deleted" status #26206
  - Support showing whether a binding is used for query optimization in the result of `EXPLAIN VERBOSE` #26930
  - Add a new status variation `last_plan_binding_update_time` to view the timestamp corresponding to the binding cache in the current TiDB instance #26340
  - Support reporting an error when starting binding evolution or running `admin ↪ evolve bindings` to ban the baseline evolution (currently disabled in the on-premises TiDB version because it is an experimental feature) affecting other features #26333
- PD
  - Add more QPS dimensions for hot Region scheduling, and support adjusting the priority of the scheduling #3869
  - Support hot Region balance scheduling for the write hotspot of TiFlash #3900
- TiFlash
  - Add operators: `MOD / %`, `LIKE`
  - Add string functions: `ASCII()`, `COALESCE()`, `LENGTH()`, `POSITION()`, `TRIM()`
  - Add mathematical functions: `CONV()`, `CRC32()`, `DEGREES()`, `EXP()`, `LN()`, `LOG()`, `LOG10()`, `LOG2()`, `POW()`, `RADIANS()`, `ROUND(decimal)`, `SIN()`, `MOD()`

  - Add date functions: `ADDDATE(string, real)`, `DATE_ADD(string, real)`, `DATE_ADD()`
  - Add other functions: `INET_NTOA()`, `INET_ATON()`, `INET6_ATON`, `INET6_NTOA()`
  - Support Shuffled Hash Join calculation and Shuffled Hash Aggregation calculation in the MPP mode when a new collation is enabled
  - Optimize basic code to improve MPP performance
  - Support casting the `STRING` type to the `DOUBLE` type
  - Optimize the non-joined data in right outer join using multiple threads
  - Support automatically invalidating stale Regions in MPP queries

- Tools

  - TiCDC

    * Add the concurrency limit to the incremental scan of kv client #1899
    * TiCDC can always pull the old value internally #2271
    * TiCDC can fail and exit fast when unrecoverable DML errors occur #1928
    * `resolve lock` cannot be run immediately after a Region is initialized #2235
    * Optimize workerpool to reduce the number of goroutines under high concurrency #2201

  - Dumpling

    * Support always splitting TiDB v3.x tables through `tidb_rowid` to save TiDB memory #301
    * Reduce access of Dumpling to the `information_schema` to improve stability #305

16.12.5.5 Bug Fixes

- TiDB

  - Fix the issue that an incorrect result is returned when using merge join on the `SET` type column #25669
  - Fix the data corruption issue in the `IN` expression's arguments #25591
  - Avoid the sessions of GC being affected by global variables #24976
  - Fix the panic issue that occurs when using `limit` in the window function queries #25344
  - Fix the wrong value returned when querying a partitioned table using `Limit` #24636
  - Fix the issue that `IFNULL` does not correctly take effect on the `ENUM` or `SET` type column #24944
  - Fix the wrong results caused by changing the `count` in the join subqueries to `first_row` #24865
  - Fix the query hang issue that occurs when `ParallelApply` is used under the `TopN` operator #24930

  - Fix the issue that more results than expected are returned when executing SQL statements using multi-column prefix indexes #24356
  - Fix the issue that the `<=>` operator cannot correctly take effect #24477
  - Fix the data race issue of the parallel `Apply` operator #23280
  - Fix the issue that the `index out of range` error is reported when sorting the IndexMerge results of the PartitionUnion operator #23919
  - Fix the issue that setting the `tidb_snapshot` variable to an unexpectedly large value might damage the transaction isolation #25680
  - Fix the issue that the ODBC-styled constant (for example, `{d '2020-01-01'}`) cannot be used as the expression #25531
  - Fix the issue that `SELECT DISTINCT` converted to `Batch Get` causes incorrect results #25320
  - Fix the issue that backing off queries from TiFlash to TiKV cannot be triggered #23665 #24421
  - Fix the `index-out-of-range` error that occurs when checking `only_full_group_by` ↪ #23839)
  - Fix the issue that the result of index join in correlated subqueries is wrong #25799

- TiKV

  - Fix the wrong `tikv_raftstore_hibernated_peer_state` metric #10330
  - Fix the wrong arguments type of the `json_unquote()` function in the coprocessor #10176
  - Skip clearing callback during graceful shutdown to avoid breaking ACID in some cases #10353 #10307
  - Fix a bug that the read index is shared for replica reads on a Leader #10347
  - Fix the wrong function that casts `DOUBLE` to `DOUBLE` #25200

- PD

  - Fix the issue that the expected scheduling cannot be generated due to scheduling conflicts among multiple schedulers #3807 #3778

- TiFlash

  - Fix the issue that TiFlash keeps restarting because of the split failure
  - Fix the potential issue that TiFlash cannot delete the delta data
  - Fix a bug that TiFlash adds wrong padding for non-binary characters in the `CAST` function
  - Fix the issue of incorrect results when handling aggregation queries with complex `GROUP BY` columns
  - Fix the TiFlash panic issue that occurs under heavy write pressure
  - Fix the panic that occurs when the right jon key is not nullable and the left join key is nullable
  - Fix the potential issue that the `read-index` requests take a long time
  - Fix the panic issue that occurs when the read load is heavy

  - Fix the panic issue that might occur when the `Date_Format` function is called with the `STRING` type argument and `NULL` values

- Tools

  - TiCDC

    * Fix a bug that TiCDC owner exits abnormally when refreshing the checkpoint #1902
    * Fix a bug that changefeed fails immediately after its successful creation #2113
    * Fix a bug that changefeed fails due to the invalid format of rules filter #1625
    * Fix the potential DDL loss issue when the TiCDC owner panics #1260
    * Fix the CLI compatibility issue with 4.0.x clusters on the default sort-engine option #2373
    * Fix a bug that changefeed might be reset unexpectedly when TiCDC gets the `ErrSchemaStorageTableMiss` error #2422
    * Fix a bug that changefeed cannot be removed when TiCDC gets the `ErrGCTTLExceeded` error #2391
    * Fix a bug that TiCDC fails to synchronize large tables to cdclog #1259 #2424
    * Fix a bug that multiple processors might write data to the same table when TiCDC is rescheduling the table #2230

  - Backup & Restore (BR)

    * Fix a bug that BR skips restoring all system tables during the restore #1197 #1201
    * Fix a bug that BR misses DDL operations when restoring cdclog #870

  - TiDB Lightning

    * Fix a bug that TiDB Lightning fails to parse the `DECIMAL` data type in Parquet file #1272
    * Fix a bug that TiDB Lightning reports the "Error 9007: Write conflict" error when restoring table schemas #1290
    * Fix a bug that TiDB Lightning fails to import data due to the overflow of int handle #1291
    * Fix a bug that TiDB Lightning might get a checksum mismatching error due to data loss in the local backend mode #1403
    * Fix the Lightning incompatibility issue with clustered index when TiDB Lightning is restoring table schemas #1362

  - Dumpling

    * Fix a bug that the data export fails because the Dumpling GC safepoint is set too late #290
    * Fix the Dumpling getting stuck issue when exporting table names from the upstream database in certain MySQL versions #322

16.13 v5.1

16.13.1 TiDB 5.1.5 Release Notes

Release date: December 28, 2022

TiDB version: 5.1.5

Quick access: Quick start | Production deployment | Installation packages

16.13.1.1 Compatibility changes

- PD
  - Disable compiling swagger server by default #4932

16.13.1.2 Bug fixes

- TiDB
  - Fix the issue that the window function causes TiDB to panic instead of reporting an error #30326
  - Fix the wrong result that occurs when enabling dynamic mode in partitioned tables for TiFlash #37254
  - Fix wrong results of `GREATEST` and `LEAST` when passing in unsigned `BIGINT` arguments #30101
  - Fix wrong results of deleting data of multiple tables using `left join` #31321
  - Fix the issue that the result of `concat(ifnull(time(3)))` in TiDB is different from that in MySQL #29498
  - Fix the issue that the SQL statements that contain `cast(integer as char) union string` return wrong results #29513
  - Fix the issue that `INL_HASH_JOIN` might hang when used with `LIMIT` #35638
  - Fix the wrong `ANY_VALUE` result that occurs when a Region returns empty data #30923
  - Fix wrong results of index join caused by an innerWorker panic #31494
  - Fix the issue that a SQL operation is canceled when its JSON type column joins its `CHAR` type column #29401
  - Fix the issue that the background HTTP service of TiDB might not exit successfully and makes the cluster in an abnormal state #30571
  - Fix the issue that concurrent column type change causes inconsistency between the schema and the data #31048
  - Fix the issue that `KILL TIDB` cannot take effect immediately on idle connections #24031
  - Fix the bug that setting any session variable will make `tidb_snapshot` fail to work #35515

  - Fix the issue that the Region cache is not cleaned up in time when the Region is merged #37141
  - Fix the panic issue caused by the connection array race in the KV client #33773
  - Fix the issue that when TiDB Binlog is enabled, executing the `ALTER SEQUENCE` ↪ statement might cause a wrong metadata version and cause Drainer to exit #36276
  - Fix the bug that TiDB may panic when querying statement summary tables #35340
  - Fix the issue that TiDB gets the wrong result when using TiFlash to scan tables with empty range although TiFlash does not support reading tables with empty range yet #33083
  - Fix the issue that the `avg()` function returns `ERROR 1105 (HY000): other` ↪ `error for mpp stream: Could not convert to the target type - -` ↪ `value is out of range.` when queried from TiFlash #29952
  - Fix the issue that `ERROR 1105 (HY000): close of nil channel` is returned when using `HashJoinExec` #30289
  - Fix the issue that TiKV and TiFlash return different results when querying logical operations #37258
  - Fix the issue that the `EXECUTE` statement might throw an unexpected error in specific scenarios #37187
  - Fix the planner wrong behaviors that occur when `tidb_opt_agg_push_down` and `tidb_enforce_mpp` are enabled #34465
  - Fix a bug that TiDB might send coprocessor requests when executing the `SHOW` ↪ `COLUMNS` statement #36496
  - Add warnings for `lock tables` and `unlock tables` when the `enable-table-` ↪ `lock` flag is not enabled #28967
  - Fix the issue that range partitions allow multiple `MAXVALUE` partitions #36329

- TiKV

  - Fix the issue of time parsing error that occurs when the `DATETIME` values contain a fraction and `Z` #12739
  - Fix a bug that replica reads might violate the linearizability #12109
  - Fix a bug that Regions might be overlapped if Raftstore is busy #13160
  - Fix the TiKV panic issue that occurs when applying snapshot is aborted #11618
  - Fix a bug that TiKV might panic if it has been running for 2 years or more #11940
  - Fix the panic issue that might occur when the source peer catches up logs by snapshot in the Region merge process #12663
  - Fix the issue that TiKV panics when performing type conversion for an empty string #12673
  - Fix a bug that stale messages cause TiKV to panic #12023
  - Fix the panic issue that might occur when a peer is being split and destroyed at the same time #12825

  - Fix the TiKV panic issue that occurs when the target peer is replaced with the peer that is destroyed without being initialized when merging a Region #12048
  - Fix the issue that TiKV reports the `invalid store ID 0` error when using Follower Read #12478
  - Fix the possible duplicate commit records in pessimistic transactions when async commit is enabled #12615
  - Support configuring the `unreachable_backoff` item to avoid Raftstore broadcasting too many messages after one peer becomes unreachable #13054
  - Fix the issue that successfully committed optimistic transactions may report the `Write Conflict` error when the network is poor #34066
  - Fix the wrong expression of `Unified Read Pool CPU` in dashboard #13086

- PD

  - Fix the issue that a removed tombstone store appears again after the PD leader transfer #4941
  - Fix the issue that scheduling cannot start immediately after the PD leader transfer #4769
  - Fix the wrong status code of `not leader` #4797
  - Fix the issue that PD cannot correctly handle dashboard proxy requests #5321
  - Fix a bug of TSO fallback in some corner cases #4884
  - Fix the issue that the TiFlash learner replica might not be created in specific scenarios #5401
  - Fix the issue that the label distribution has residual labels in the metrics #4825
  - Fix the issue that when there exists a Store with large capacity (2T for example), fully allocated small Stores cannot be detected, which results in no balance operator being generated #4805
  - Fix the issue that schedulers do not work when `SchedulerMaxWaitingOperator` is set to `1` #4946

- TiFlash

  - Fix incorrect `microsecond` when casting string to datetime #3556
  - Fix the panic issue that occurs when TLS is enabled #4196
  - Fix a bug that TiFlash might crash due to an error in parallel aggregation #5356
  - Fix the issue that a query containing `JOIN` might be hung if an error occurs #4195
  - Fix the issue that the function `OR` returns wrong results #5849
  - Fix the bug that invalid storage directory configurations lead to unexpected behaviors #4093
  - Fix potential data inconsistency after a lot of INSERT and DELETE operations #4956
  - Fix a bug that data not matching any region range remains on a TiFlash node #4414
  - Fix the potential query error after adding columns under heavy read workload #3967

  - Fix repeated crashes caused by the `commit state jump backward` errors #2576
  - Fix potential errors when querying on a table with many delete operations #4747
  - Fix the issue that the date format identifies `''` as an invalid separator #4036
  - Fix the wrong result that occurs when casting `DATETIME` to `DECIMAL` #4151
  - Fix the bug that some exceptions are not handled properly #4101
  - Fix the issue that `Prepare Merge` might damage the metadata of the raft store and cause TiFlash to restart #3435
  - Fix a bug that an MPP query might fail due to random gRPC keepalive timeout #4662
  - Fix the issue that the result of `IN` is incorrect in multi-value expressions #4016
  - Fix a bug that MPP tasks might leak threads forever #4238
  - Fix the issue that expired data is recycled slowly #4146
  - Fix the overflow that occurs when casting `FLOAT` to `DECIMAL` #3998
  - Fix the issue that logical operators return wrong results when the argument type is UInt8 #6127
  - Fix the potential `index out of bounds` error if calling `json_length` with empty string #2705
  - Fix wrong decimal comparison results in corner cases #4512
  - Fix `TiFlash_schema_error` reported when `NOT NULL` columns are added #4596
  - Fix the issue that TiFlash bootstrap fails when `0.0` is used as the default value for integers, for example, `` `i` int(11)NOT NULL DEFAULT '0.0' `` #3157

- Tools

  - TiDB Binlog

    * Fix the issue that Drainer cannot send requests to Pump correctly when `compressor` is set to `zip` #1152

  - Backup & Restore (BR)

    * Fix the issue that system tables cannot be restored because concurrently backing up system tables makes the table name fail to update #29710

  - TiCDC

    * Fix data loss that occurs in special incremental scanning scenarios #5468
    * Fix the issue that there are no sorter metrics #5690
    * Fix excessive memory usage by optimizing the way DDL schemas are buffered #1386

16.13.2 TiDB 5.1.4 Release Notes

Release Date: February 22, 2022

TiDB version: 5.1.4

16.13.2.1 Compatibility changes

- TiDB
  - Change the default value of the system variable `tidb_analyze_version` from `2` to `1` #31748
  - Since v5.1.4, if TiKV is configured with `storage.enable-ttl = true`, the requests from TiDB are rejected, because the TTL feature of TiKV only supports the RawKV mode #27303
- Tools
  - TiCDC
    * Set the default value of `max-message-bytes` to 10M #4041

16.13.2.2 Improvements

- TiDB
  - Support partition pruning for the built-in `IN` expression in Range partition tables #26739
  - Improve the accuracy of tracking memory usage when `IndexJoin` is executed #28650
- TiKV
  - Update the proc filesystem (procfs) to v0.12.0 #11702
  - Improve the error log report in the Raft client #11959
  - Increase the speed of inserting SST files by moving the verification process to the `Import` thread pool from the `Apply` thread pool #11239
- PD
  - Speed up the exit process of schedulers #4146
- TiFlash
  - Support pushing down `ADDDATE()` and `DATE_ADD()` to TiFlash
  - Support pushing down `INET6_ATON()` and `INET6_NTOA()` to TiFlash
  - Support pushing down `INET_ATON()` and `INET_NTOA()` to TiFlash
  - Increase the max supported depth of an expression or a plan tree in a DAG request from `100` to `200`
- Tools

- TiCDC
  * Add the exponential backoff mechanism for restarting a changefeed. #3329
  * Reduce the replication latency when replicating many tables #3900
  * Add metrics for observing the remaining time of incremental scan #2985
  * Reduce the count of "EventFeed retry rate limited" logs #4006
  * Add more Prometheus and Grafana monitoring metrics and alerts, including `no owner alert`, `mounter row`, `table sink total row`, and `buffer sink total row` #4054 #1606
  * Optimize rate limiting control on TiKV reloads to reduce gPRC congestion during changefeed initialization #3110
  * Reduce the time for the KV client to recover when a TiKV store is down #3191

16.13.2.3 Bug fixes

- TiDB
  - Fix a memory leak bug that occurs when the system variable `tidb_analyze_version` is set to `2` #32499
  - Fix the issue that the `MaxDays` and `MaxBackups` configurations do not take effect for the slow log #25716
  - Fix the issue that executing the `INSERT ... SELECT ... ON DUPLICATE KEY UPDATE` statement gets panic #28078
  - Fix the wrong result that might occur when performing `JOIN` on `ENUM` type columns #27831
  - Fix the issue that INDEX HASH JOIN returns the `send on closed channel` error #31129
  - Fix the issue that using the `BatchCommands` API might block sending TiDB requests to TiKV in some rare cases #32500
  - Fix the issue of potential data index inconsistency in optimistic transaction mode #30410
  - Fix the issue that window functions might return different results when using a transaction or not #29947
  - Fix the issue that the length information is wrong when casting `Decimal` to `String` #29417
  - Fix the issue that the `GREATEST` function returns incorrect result that occurs when setting the `tidb_enable_vectorized_expression` vectorized expression to `off` #29434
  - Fix the issue that the optimizer might cache invalid plans for `join` in some cases #28087
  - Fix wrong results of the `microsecond` and `hour` functions in vectorized expressions #29244 #28643
  - Fix the TiDB panic when executing the `ALTER TABLE.. ADD INDEX` statement in some cases #27687

  - Fix a bug that the availability detection of MPP node does not work in some corner cases #3118
  - Fix the `DATA RACE` issue when assigning `MPP task ID` #27952
  - Fix the `INDEX OUT OF RANGE` error for a MPP query after deleting an empty `dual table` #28250
  - Fix the issue of false positive error log `invalid cop task execution summaries length` for MPP queries #1791
  - Fix the issue that SET GLOBAL tidb_skip_isolation_level_check=1 doesn't affect new session settings #27897
  - Fix the `index out of range` issue that occurs when `tiup bench` runs for a long time #26832

- TiKV

  - Fix a bug that TiKV cannot delete a range of data (`unsafe_destroy_range` cannot be executed) when the GC worker is busy #11903
  - Fix the issue that destroying a peer might cause high latency #10210
  - Fix a bug that the `any_value` function returns a wrong result when regions are empty #11735
  - Fix the issue that deleting an uninitialized replica might cause an old replica to be recreated #10533
  - Fix the metadata corruption issue when `Prepare Merge` is triggered after a new election is finished but the isolated peer is not informed #11526
  - Fix the deadlock issue that happens occasionally when coroutines run too fast #11549
  - Fix the potential deadlock and memory leak issues when profiling flame graphs #11108
  - Fix the rare data inconsistency issue when retrying a prewrite request in pessimistic transactions #11187
  - Fix a bug that the configuration `resource-metering.enabled` does not work #11235
  - Fix the issue that some coroutines leak in `resolved_ts` #10965
  - Fix the issue of reporting false "GC can not work" alert under low write flow #9910
  - Fix a bug that tikv-ctl cannot return the correct Region-related information #11393
  - Fix the issue that a down TiKV node causes the resolved timestamp to lag #11351
  - Fix a panic issue that occurs when Region merge, ConfChange, and Snapshot happen at the same time in extreme conditions #11475
  - Fix the issue that TiKV cannot detect the memory lock when TiKV performs a reverse table scan #11440
  - Fix the issue of negative sign when the decimal divide result is zero #29586
  - Fix a memory leak caused by the monitoring data of statistics threads #11195
  - Fix the issue of TiCDC panic that occurs when the downstream database is missing #11123

  - Fix the issue that TiCDC adds scan retries frequently due to the Congest error #11082
  - Fix the issue that batch messages are too large in Raft client implementation #9714
  - Collapse some uncommon storage-related metrics in Grafana dashboard #11681

- PD

  - Fix a bug that the schedule generated by the region scatterer might decrease the number of peers #4565
  - Fix the issue that Region statistics are not affected by `flow-round-by-digit` #4295
  - Fix slow leader election caused by stucked region syncer #3936
  - Support that the evict leader scheduler can schedule regions with unhealthy peers #4093
  - Fix the issue that the cold hotspot data cannot be deleted from the hotspot statistics #4390
  - Fix a panic issue that occurs after the TiKV node is removed #4344
  - Fix the issue that the scheduling operator cannot fail fast because the target store is down #3353

- TiFlash

  - Fix the issue that the `str_to_date()` function incorrectly handles leading zeros when parsing microseconds
  - Fix the TiFlash crash problem when the memory limit is enabled
  - Fix the issue that when an input time is earlier than 1970-01-01 00:00:01 UTC, the behavior of `unix_timestamp` is inconsistent with that of TiDB or MySQL
  - Fix the potential data inconsistency caused by widening the primary key column when the primary key is handle
  - Fix the overflow bug and the issue of reporting `Can't compare` error when comparing data in the `DECIMAL` data type
  - Fix the unexpected error of `3rd arguments of function substringUTF8 must be constants.`
  - Fix the issue that TiFlash fails to start on platforms without the `nsl` library
  - Fix the overflow bug when casting data to the `DECIMAL` data type
  - Fix the issue that the `castStringAsReal` behavior is inconsistent in TiFlash and in TiDB/TiKV
  - Fix the issue that TiFlash might return the `EstablishMPPConnection` error after it is restarted
  - Fix the issue that obsolete data cannot be reclaimed after setting the number of TiFlash replicas to 0
  - Fix the issue that the `CastStringAsDecimal` behavior is inconsistent in TiFlash and in TiDB/TiKV
  - Fix the issue that queries with the `where <string>` clause return wrong results

  - Fix the issue that TiFlash might panic when an MPP query is stopped
  - Fix the unexpected error of `Unexpected type of column: Nullable(Nothing)`

- Tools

  - TiCDC

    * Fix a bug that MySQL sink generates duplicated `replace` SQL statements if `batch-replace-enable` is disabled #4501
    * Fix the issue that the `cached region` monitoring metric is negative #4300
    * Fix the issue that replication cannot be performed when `min.insync.replicas` is smaller than `replication-factor` #3994
    * Fix the potential panic issue that occurs when a replication task is removed #3128
    * Fix the issue of potential data loss caused by inaccurate checkpoint #3545
    * Fix the potential issue that the deadlock causes a replication task to get stuck #4055
    * Fix the issue that special comments in DDL statements cause the replication task to stop #3755
    * Fix a bug that EtcdWorker might hang the owner and processor #3750
    * Fix the issue that `stopped` changefeeds resume automatically after a cluster upgrade #3473
    * Fix the issue that default values cannot be replicated #3793
    * Fix data inconsistency caused by TiCDC default value padding exceptions #3918 #3929
    * Fix a bug that an owner gets stuck when a PD leader shuts down and transfers to a new node #3615
    * Fix the TiCDC panic issue that occurs when manually cleaning the task status in etcd #2980
    * Fix the issue that the service cannot be started because of a timezone issue in the RHEL release #3584
    * Fix the issue of overly frequent warnings caused by MySQL sink deadlock #2706
    * Fix the bug that the `enable-old-value` configuration item is not automatically set to `true` on Canal and Maxwell protocols #3676
    * Fix the issue that Avro sink does not support parsing JSON type columns #3624
    * Fix the negative value error in the changefeed checkpoint lag #3010
    * Fix the OOM issue in the container environment #1798
    * Fix the TiCDC replication interruption issue when multiple TiKVs crash or during a forced restart #3288
    * Fix the memory leak issue after processing DDLs #3174
    * Fix the issue that changefeed does not fail fast enough when the ErrGCTTLExceeded error occurs #3111
    * Fix the issue that TiCDC replication task might terminate when the upstream TiDB instance unexpectedly exits #3061

    * Fix the issue that TiCDC process might panic when TiKV sends duplicate requests to the same Region #2386
    * Fix the issue that Kafka may send excessively large messages by setting the default value of `max-message-bytes` to `10M` #3081
    * Fix the issue that TiCDC sync task might pause when an error occurs during writing a Kafka message #2978
  - Backup & Restore (BR)
    * Fix the potential issue that Regions might be unevenly distributed after a restore operation is finished #30425 #31034
  - TiDB Binlog
    * Fix the issue that DBaaS importing CSV fails with InvalidRange if CSV file size is about 256MB and `strict-format` is `true` #27763
  - TiDB Lightning
    * Fix the issue that TiDB Lightning does not report errors when the S3 storage path does not exist #28031 #30709

16.13.3 TiDB 5.1.3 Release Note

Release date: December 3, 2021

TiDB version: 5.1.3

16.13.3.1 Bug fix

- TiKV
  - Fix the issue that the `GcKeys` task does not work when it is called by multiple keys. Caused by this issue, compaction filter GC might not drop the MVCC deletion information. #11217

16.13.4 TiDB 5.1.2 Release Notes

Release Date: September 27, 2021

TiDB version: 5.1.2

16.13.4.1 Compatibility changes

- TiDB
  - The following bug fixes change execution results, which might cause upgrade incompatibilities:

    * Fix the issue that `greatest(datetime)union null` returns empty string #26532
    * Fix the issue that the `having` clause might not work correctly #26496
    * Fix the wrong execution results that occur when the collations around the `between` expression are different #27146
    * Fix the wrong execution results that occur when the column in the `group_concat` function has a non-bin collation #27429
    * Fix an issue that using a `count(distinct)` expression on multiple columns returns wrong result when the new collation is enabled #27091
    * Fix the result wrong that occurs when the argument of the `extract` function is a negative duration #27236
    * Fix the issue that inserting an invalid date does not report an error when the `SQL_MODE` is 'STRICT_TRANS_TABLES' #26762
    * Fix the issue that using an invalid default date does not report an error when the `SQL_MODE` is 'NO_ZERO_IN_DATE' #26766

- Tools

  - TiCDC

    * Set the compatible version from `5.1.0-alpha` to `5.2.0-alpha` #2659

16.13.4.2 Improvements

- TiDB

  - Trigger auto-analyze by histogram row count and increase the accuracy of this trigger action #24237

- TiKV

  - Support dynamically modifying TiCDC configurations #10645
  - Reduce the size of Resolved TS message to save network bandwidth #2448
  - Limit the counts of peer stats in the heartbeat message reported by a single store #10621

- PD

  - Allow empty Regions to be scheduled and use a separate tolerance configuration in scatter range scheduler #4117
  - Improve the performance of synchronizing Region information between PDs #3933
  - Support dynamically adjusting the retry limit of a store based on the generated operator #3744

- TiFlash

  - Support the `DATE()` function
  - Add Grafana panels for write throughput per instance
  - Optimize the performance of the `leader-read` process
  - Accelerate the process of canceling MPP tasks

- Tools

  - TiCDC

    * Optimize memory management when the Unified Sorter is using memory to sort data #2553
    * Optimize workerpool for fewer goroutines when concurrency is high #2211
    * Reduce goroutine usage when a table's Region transfer away from a TiKV node #2284
    * Add a global gRPC connection pool and share gRPC connections among KV clients #2534
    * Prohibit operating TiCDC clusters across major and minor versions #2599

  - Dumpling

    * Support backing up MySQL-compatible databases that do not support `START TRANSACTION ... WITH CONSISTENT SNAPSHOT` and `SHOW CREATE TABLE` #309

16.13.4.3 Bug fixes

- TiDB

  - Fix the potential wrong results of index hash join when the hash column is the `ENUM` type #27893
  - Fix a batch client bug that recycle idle connection might block sending requests in some rare cases #27678
  - Fix the issue that the overflow check of the `FLOAT64` type is different with that of MySQL #23897
  - Fix the issue that TiDB returns an `unknow` error while it should return the `pd is timeout` error #26147
  - Fix the wrong character set and collation for the `case when` expression #26662
  - Fix the potential `can not found column in Schema column` error for MPP queries #28148
  - Fix a bug that TiDB might panic when TiFlash is shutting down #28096
  - Fix the issue of wrong range caused by using `enum like 'x%'` #27130
  - Fix the Common Table Expression (CTE) dead lock issue when used with IndexLookupJoin #27410
  - Fix a bug that retryable deadlocks are incorrectly recorded into the `INFORMATION_SCHEMA.DEADLOCKS` table #27400
  - Fix the issue that the `TABLESAMPLE` query result from partitioned tables is not sorted as expected #27349

  - Remove the unused `/debug/sub-optimal-plan` HTTP API #27265
  - Fix a bug that the query might return wrong results when the hash partitioned table deals with unsigned data #26569
  - Fix a bug that creating partition fails if `NO_UNSIGNED_SUBTRACTION` is set #26765
  - Fix the issue that the `distinct` flag is missing when `Apply` is converted to `Join` #26958
  - Set a block duration for the newly recovered TiFlash node to avoid blocking queries during this time #26897
  - Fix a bug that might occur when the CTE is referenced more than once #26212
  - Fix a CTE bug when MergeJoin is used #25474
  - Fix a bug that the `SELECT FOR UPDATE` statement does not correctly lock the data when a normal table joins a partitioned table #26251
  - Fix the issue that the `SELECT FOR UPDATE` statement returns an error when a normal table joins a partitioned table #26250
  - Fix the issue that `PointGet` does not use the lite version of resolving lock #26562

- TiKV

  - Fix a panic issue that occurs after TiKV is upgraded from v3.x to later versions #10902
  - Fix the potential disk full issue caused by corrupted snapshot files #10813
  - Make the slow log of TiKV coprocessor only consider the time spent on processing requests #10841
  - Drop log instead of blocking threads when the slogger thread is overloaded and the queue is filled up #10841
  - Fix a panic issue that occurs when processing Coprocessor requests times out #10852
  - Fix the TiKV panic issue that occurs when upgrading from a pre-5.0 version with Titan enabled #10842
  - Fix the issue that TiKV of a newer version cannot be rolled back to v5.0.x #10842
  - Fix the issue that TiKV might delete files before ingesting data to RocksDB #10438
  - Fix the parsing failure caused by the left pessimistic locks #26404

- PD

  - Fix the issue that PD does not fix the down peers in time #4077
  - Fix the issue that the replica count of the default placement rules stays constant after `replication.max-replicas` is updated #3886
  - Fix a bug that PD might panic when scaling out TiKV #3868
  - Fix a bug that the hot Region scheduler cannot work when the cluster has the evict leader scheduler #3697

- TiFlash

  - Fix the issue of unexpected results when TiFlash fails to establish MPP connections
  - Fix the potential issue of data inconsistency that occurs when TiFlash is deployed on multiple disks
  - Fix a bug that MPP queries get wrong results when TiFlash server is under high load
  - Fix a potential bug that MPP queries hang forever
  - Fix the panic issue when operating store initialization and DDL simultaneously
  - Fix a bug of incorrect results that occurs when queries contain filters like `CONSTANT` ↪ , `<`, `<=`, `>`, `>=`, or `COLUMN`
  - Fix the potential panic issue when `Snapshot` is applied simultaneously with multiple DDL operations
  - Fix the issue that the store size in metrics is inaccurate under heavy writing
  - Fix the potential issue that TiFlash cannot garbage-collect the delta data after running for a long time
  - Fix the issue of wrong results when the new collation is enabled
  - Fix the potential panic issue that occurs when resolving locks
  - Fix a potential bug that metrics display wrong values

- Tools

  - Backup & Restore (BR)

    * Fix the issue that the average speed is not accurate during data backup and restore #1405

  - Dumpling

    * Fix the issue that Dumpling is pending when `show table status` returns incorrect results in some MySQL versions (8.0.3 and 8.0.23) #322
    * Fix the CLI compatibility issue with 4.0.x clusters on the default `sort-` ↪ `engine` option #2373

  - TiCDC

    * Fix a bug that the JSON encoding might cause panic when processing a string type value that is `string` or `[]byte` #2758
    * Reduce gRPC window size to avoid OOM #2673
    * Fix a gRPC `keepalive` error under high memory pressure #2202
    * Fix a bug that an unsigned `tinyint` causes TiCDC to panic #2648
    * Fix an empty value issue in TiCDC Open Protocol. An empty value is no longer output when there is no change in one transaction. #2612
    * Fix a bug in DDL handling during manual restarts #2603
    * Fix the issue that `EtcdWorker`'s snapshot isolation might be wrongly violated when managing the metadata #2559
    * Fix a bug that multiple processors might write data to the same table when TiCDC is rescheduling the table #2230
    * Fix a bug that changefeed might be reset unexpectedly when TiCDC gets the `ErrSchemaStorageTableMiss` error #2422

* Fix a bug that changefeed cannot be removed when TiCDC gets the `ErrGCTTLExceeded` error #2391
* Fix a bug that TiCDC fails to synchronize large tables to cdclog #1259 #2424

16.13.5 TiDB 5.1.1 Release Notes

Release Date: July 30, 2021

TiDB version: 5.1.1

16.13.5.1 Compatibility changes

- TiDB
  - For TiDB clusters upgrade from v4.0 to v5.1, the default value of `tidb_multi_statement_mode` is `OFF`. It is recommended to use the multi-statement feature of your client library instead. See the documentation on `tidb_multi_statement_mode` for details. #25751
  - Change the default value of the `tidb_stmt_summary_max_stmt_count` variable from `200` to `3000` #25874
  - Require the `SUPER` privilege to access the `table_storage_stats` table #26352
  - Require the `SELECT` privilege on `mysql.user` to access the `information_schema.user_privileges` table to show other user's privileges #26311
  - Require the `CONFIG` privilege to access the `information_schema.cluster_hardware` table #26297
  - Require the `PROCESS` privilege to access the `information_schema.cluster_info` table #26297
  - Require the `PROCESS` privilege to access the `information_schema.cluster_load` table #26297
  - Require the `PROCESS` privilege to access the `information_schema.cluster_systeminfo` table #26297
  - Require the `PROCESS` privilege to access the `information_schema.cluster_log` table #26297
  - Require the `CONFIG` privilege to access the `information_schema.cluster_config` table #26150

16.13.5.2 Feature enhancements

- TiDB Dashboard
  - Support OIDC SSO. By setting the OIDC-compatible SSO services (such as Okta and Auth0), users can log into TiDB Dashboard without entering the SQL password. #3883
- TiFlash
  - Support the `HAVING()` function in DAG requests

16.13.5.3 Improvements

- TiDB
  - Announce the general availability (GA) of the Stale Read feature
  - Avoid allocation for `paramMarker` to speed up data insertion #26076
  - Support the stable result mode to make the query results more stable #25995
  - Support pushing down the built-in function `json_unquote()` to TiKV #26265
  - Support retrying MPP queries #26480
  - Change the `LOCK` record into the `PUT` record for the index keys using `point get` or `batch point get` for `UPDATE` reads #26225
  - Forbid creating views from stale queries #26200
  - Thoroughly push down the `COUNT(DISTINCT)` aggregation function in the MPP mode #26194
  - Check the availability of TiFlash before launching MPP queries #26192
  - Do not allow setting the read timestamp to a future time #25763
  - Print log warnings when aggregation functions cannot be pushed down in `EXPLAIN` statements #25737
  - Add the `statements_summary_evicted` table to record the evicted count information of a cluster #25587
  - Improve the MySQL compatibility of the built-in function `str_to_date` for the format specifiers `%b/%M/%r/%T` #25768
- TiKV
  - Make the prewrite requests as idempotent as possible to reduce the chance of undetermined errors #10586
  - Prevent the risk of stack overflow when handling many expired commands #10502
  - Avoid excessive commit request retrying by not using the Stale Read request's `start_ts` to update `max_ts` #10451
  - Handle read ready and write ready separately to reduce read latency #10592
  - Reduce the impact on data import speed when the I/O rate limiting is enabled #10390
  - Improve the load balance between Raft gRPC connections #10495
- Tools
  - TiCDC
    - Remove `file sorter` #2327
    - Improve the error message returned when a PD endpoint misses the certificate #1973
  - TiDB Lightning
    - Add a retry mechanism for restoring schemas #1294
  - Dumpling

    * Always split tables using `_tidb_rowid` when the upstream is a TiDB v3.x cluster, which helps reduce TiDB's memory usage #295
    * Reduce the frequency of accessing the database metadata to improve Dumpling's performance and stability #315

16.13.5.4 Bug fixes

- TiDB

    - Fix the data loss issue that might occur when changing the column type with `tidb_enable_amend_pessimistic_txn=on` #26203
    - Fix the issue that the behavior of the `last_day` function is incompatible in the SQL mode #26001
    - Fix the panic issue that might occur when `LIMIT` is on top of window functions #25344
    - Fix the issue that committing pessimistic transactions might cause write conflict #25964
    - Fix the issue that the result of index join in correlated subqueries is wrong #25799
    - Fix a bug that the successfully committed optimistic transactions might report commit errors #10468
    - Fix the issue that an incorrect result is returned when using merge join on the `SET` type column #25669
    - Fix a bug that the index keys in a pessimistic transaction might be repeatedly committed #26359
    - Fix the risk of integer overflow when the optimizer is locating partitions #26227
    - Fix the issue that invalid values might be written when casting `DATE` to timestamp #26292
    - Fix the issue that the Coprocessor Cache metrics are not displayed on Grafana #26338
    - Fix the issue of annoying logs caused by telemetry #25760 #25785
    - Fix a bug on the query range of prefix index #26029
    - Fix the issue that concurrently truncating the same partition hangs DDL executions #26229
    - Fix the issue of duplicate `ENUM` items #25955
    - Fix a bug that the CTE iterator is not correctly closed #26112
    - Fix the issue that the `LOAD DATA` statement might abnormally import non-utf8 data #25979
    - Fix the panic issue that might occur when using the window function on the unsigned integer columns #25956
    - Fix the issue that TiDB might panic when resolving async commit locks #25778
    - Fix the issue that Stale Read is not fully compatible with the `PREPARE` statements #25800
    - Fix the issue that the ODBC-styled constant (for example, `{d '2020-01-01'}`) cannot be used as the expression #25531

  - Fix an error that occurs when running TiDB alone #25555

- TiKV

  - Fix the issue that the duration calculation might panic on certain platforms #10569
  - Fix the issue that Load Base Split mistakenly uses the unencoded keys of `batch_get_command` #10542
  - Fix the issue that changing the `resolved-ts.advance-ts-interval` configuration dynamically cannot take effect immediately #10426
  - Fix the issue of follower metadata corruption in rare cases with more than 4 replicas #10225
  - Fix the panic issue that occurs when building a snapshot twice if encryption is enabled #9786 #10407
  - Fix the wrong `tikv_raftstore_hibernated_peer_state` metric #10330
  - Fix the wrong arguments type of the `json_unquote()` function in the coprocessor #10176
  - Fix a bug that the index keys in a pessimistic transaction might be repeatedly committed #10468
  - Fix the issue that the `ReadIndex` request returns stale result right after the leader is transferred #9351

- PD

  - Fix the issue the expected scheduling cannot be generated when the conflict occurs due to multiple schedulers running at the same time #3807 #3778
  - Fix the issue that the scheduler might appear again even if the scheduler is already deleted #2572

- TiFlash

  - Fix the potential panic issue that occurs when running table scan tasks
  - Fix a bug that TiFlash raises the error about `duplicated region` when handling DAQ requests
  - Fix the panic issue that occurs when the read load is heavy
  - Fix the potential panic issue that occurs when executing the `DateFormat` function
  - Fix the potential memory leak issue that occurs when executing MPP tasks
  - Fix the issue of unexpected results when executing the aggregation functions `COUNT` or `COUNT DISTINCT`
  - Fix a potential bug that TiFlash cannot restore data when deployed on multiple disks
  - Fix the issue that TiDB Dashboard cannot display the disk information of TiFlash correctly
  - Fix the potential panic issue that occurs when deconstructing `SharedQueryBlockInputStream` ↪
  - Fix the potential panic issue that occurs when deconstructing `MPPTask`

  - Fix the potential issue of data inconsistency after synchronizing data via snapshot

- Tools
  - TiCDC
    * Fix the support for the new collation feature #2301
    * Fix the issue that an unsynchronized access to a shared map at runtime might cause panic #2300
    * Fix the potential DDL loss issue that occurs when the owner crashes while executing the DDL statement #2290
    * Fix the issue of trying to resolve locks in TiDB prematurely #2188
    * Fix a bug that might cause data loss if a TiCDC node is killed immediately after a table migration #2033
    * Fix the handling logic of `changefeed update` on `--sort-dir` and `--start-ts` #1921
  - Backup & Restore (BR)
    * Fix the issue that the size of the data to restore is incorrectly calculated #1270
    * Fix the issue of missed DDL events that occurs when restoring from cdclog #870
  - TiDB Lightning
    * Fix the issue that TiDB fails to parse the `DECIMAL` type data in Parquet files #1275
    * Fix the issue of integer overflow when calculating key intervals #1291 #1290

16.13.6 TiDB 5.1 Release Notes

Release date: June 24, 2021

TiDB version: 5.1.0

In v5.1, the key new features or improvements are as follows:

- Support the Common Table Expression (CTE) feature of MySQL 8.0 to improve the readability and execution efficiency of SQL statements.
- Support changing column types online to improve code development flexibility.
- Introduce a new statistics type to improve query stability, which is enabled as an experimental feature by default.
- Support the dynamic privilege feature of MySQL 8.0 to implement more fine-grained control over certain operations.
- Support directly reading data from the local replica using the Stale Read feature to reduce read latency and improve query performance (Experimental).
- Add the Lock View feature to facilitate database administrators (DBAs) to observe transaction locking events and troubleshoot deadlock problems (Experimental).
- Add TiKV write rate limiter for background tasks to ensure that the latency of read and write requests is stable.

16.13.6.1 Compatibility changes

> **Note:**
>
> When upgrading from an earlier TiDB version to v5.1, if you want to know the compatibility change notes of all intermediate versions, you can check the Release Notes for the corresponding version.

16.13.6.1.1 System variables

Variable name	Change type	Description
`cte_max_recursion_depth` ↪	Newly added	Controls the maximum recursion depth in Common Table Expressions.
`init_connect` ↪	Newly added	Controls the initial connection to a TiDB server.
`tidb_analyze_version` ↪	Newly added	Controls how TiDB collects statistics. The default value of this variable is 2. This is an experimental feature.

Variable name	Change type	Description
tidb_enable_enhanced_security ↪	Newly added	Indicates whether the TiDB server you are connected to has the Security Enhanced Mode (SEM) enabled. This variable setting cannot be changed without restarting the TiDB server.
tidb_enforce_mpp ↪	Newly added	Controls whether to ignore the optimizer's cost estimation and to forcibly use the MPP mode for query execution. The data type of this variable is `BOOL` and the default value is `false`.

Variable name	Change type	Description
`tidb_partition_prune_mode` ↪	Newly added	Specifies whether to enable dynamic pruning mode for partitioned tables. This feature is experimental. The default value of this variable is `static`, which means the dynamic pruning mode for partitioned tables is disabled by default.

16.13.6.1.2 Configuration file parameters

Configuration file	Configuration item	Change type	Description

Configuration file	Configuration item	Change type	Description
TiDB configuration file	`security.enable-sem`	Newly added	Controls whether to enable the Security Enhanced Mode (SEM). The default value of this configuration item is `false`, which means the SEM is disabled.
TiDB configuration file	`performance.committer-concurrency`	Modified	Controls the concurrency number for requests related to commit operations in the commit phase of a single transaction. The default value is changed from `16` to `128`.

Configuration file	Configuration item	Change type	Description
TiDB configuration file	performance ↪ .tcp-no ↪ -delay	Newly added	Determines whether to enable TCP_NODELAY at the TCP layer. The default value is true, which means TCP_NODELAY is enabled.
TiDB configuration file	performance ↪ . ↪ enforce ↪ -mpp	Newly added	Controls whether TiDB ignores cost estimates of Optimizer at the instance level and enforces the MPP mode. The default value is false. This configuration item controls the initial value of the system variable tidb_enforce_mpp ↪ .

Configuration file	Configuration item	Change type	Description
TiDB configuration file	`pessimistic-txn.deadlock-history-capacity`	Newly added	Sets the maximum number of deadlock events that can be recorded in the `INFORMATION_SCHEMA.DEADLOCKS` table of a single TiDB server. The default value is `10`.
TiKV configuration file	`abort-on-panic`	Newly added	Sets whether the `abort` process allows the system to generate core dump files when TiKV panics. The default value is `false`, which means it is not allowed to generate core dump files.

Configuration file	Configuration item	Change type	Description
TiKV configuration file	`hibernate-regions`	Modified	The default value is changed from `false` to `true`. If a Region is idle for a long time, it is automatically set as hibernated.
TiKV configuration file	`old-value-cache-memory-quota`	Newly added	Sets the upper limit of memory usage by TiCDC old values. The default value is `512MB`.
TiKV configuration file	`sink-memory-quota`	Newly added	Sets the upper limit of memory usage by TiCDC data change events. The default value is `512MB`.

Configuration file	Configuration item	Change type	Description
TiKV configuration file	`incremental-scan-threads`	Newly added	Sets the number of threads for the task of incrementally scanning historical data. The default value is `4`, which means there are four threads for the task.
TiKV configuration file	`incremental-scan-concurrency`	Newly added	Sets the maximum number of concurrent executions for the tasks of incrementally scanning historical data. The default value is `6`, which means that six tasks can be concurrently executed at most.

Configuration file	Configuration item	Change type	Description
TiKV configuration file	soft- ↪ pending ↪ - ↪ compaction ↪ -bytes- ↪ limit	Modified	The soft limit on the pending compaction bytes. The default value is changed from "64GB" to "192GB".
TiKV configuration file	storage.io ↪ -rate- ↪ limit	Newly added	Controls the I/O rate of TiKV writes. The default value of storage. ↪ io-rate ↪ -limit. ↪ max- ↪ bytes- ↪ per-sec is "0MB".
TiKV configuration file	resolved- ↪ ts. ↪ enable	Newly added	Determines whether to maintain the resolved- ↪ ts for all Region leaders. The default value is true.
TiKV configuration file	resolved- ↪ ts. ↪ advance ↪ -ts- ↪ interval ↪	Newly added	The interval at which the resolved- ↪ ts is forwarded. The default value is "1s". You can change the value dynamically.

Configuration file	Configuration item	Change type	Description
TiKV configuration file	`resolved-ts.scan-lock-pool-size`	Newly added	The number of threads that TiKV uses to scan the MVCC (multi-version concurrency control) lock data when initializing the `resolved-ts`. The default value is 2.

16.13.6.1.3 Others

- Before the upgrade, check the value of the TiDB configuration `feedback-probability`. If the value is not 0, the "panic in the recoverable goroutine" error will occur after the upgrade, but this error does not affect the upgrade.
- Upgrade the Go compiler version of TiDB from go1.13.7 to go1.16.4, which improves the TiDB performance. If you are a TiDB developer, upgrade your Go compiler version to ensure a smooth compilation.
- Avoid creating tables with clustered indexes in the cluster that uses TiDB Binlog during the TiDB rolling upgrade.
- Avoid executing statements like `alter table ... modify column` or `alter table ... change column` during the TiDB rolling upgrade.
- Since v5.1, setting the replica of system tables, when building TiFlash replicas for each table, is no longer supported. Before upgrading the cluster, you need to clear the relevant system table replicas; otherwise, the upgrade will fail.
- Deprecate the `--sort-dir` parameter in the `cdc cli changefeed` command of TiCDC. Instead, you can set `--sort-dir` in the `cdc server` command. #1795
- After upgrading to TiDB 5.1, if TiDB returns the "function READ ONLY has only noop implementation" error, you can let TiDB ignore this error by setting the value of `tidb_enable_noop_functions` to `ON`. This is because the `read_only` variable in MySQL does not yet take effect in TiDB (which is a 'noop' behavior in TiDB). Therefore, even if this variable is set in TiDB, you can still write data into the TiDB cluster.

16.13.6.2 New features

16.13.6.2.1 SQL

- Support the Common Table Expression (CTE) feature of MySQL 8.0.

  This feature empowers TiDB with the capability of querying hierarchical data recursively or non-recursively and meets the needs of using tree queries to implement application logics in multiple sectors such as human resources, manufacturing, financial markets, and education.

  In TiDB, you can apply the `WITH` statement to use Common Table Expressions. User document, #17472

- Support the dynamic privilege feature of MySQL 8.0.

  Dynamic privileges are used to limit the `SUPER` privilege and provide TiDB with more flexible privilege configuration for more fine-grained access control. For example, you can use dynamic privileges to create a user account that can only perform `BACKUP` and `RESTORE` operations.

  The supported dynamic privileges are as follows:

  - `BACKUP_ADMIN`
  - `RESTORE_ADMIN`
  - `ROLE_ADMIN`
  - `CONNECTION_ADMIN`
  - `SYSTEM_VARIABLES_ADMIN`

  You can also use plugins to add new privileges. To check out all supported privileges, execute the `SHOW PRIVILEGES` statement. User document

- Add a new configuration item for the Security Enhanced Mode (SEM), which divides the TiDB administrator privileges in a finer-grained way.

  The Security Enhanced Mode is disabled by default. To enable it, see the user document.

- Enhance the capability of changing column types online. Support changing the column type online using the `ALTER TABLE` statement, including but not limited to:

  - Changing `VARCHAR` to `BIGINT`
  - Modifying the `DECIMAL` precision
  - Compressing the length of `VARCHAR(10)` to `VARCHAR(5)`

  User document

- Introduce a new SQL syntax `AS OF TIMESTAMP` to perform Stale Read, a new experimental feature used to read historical data from a specified point in time or from a specified time range.

  User document, #21094

  The examples of `AS OF TIMESTAMP` are as follows:

```
SELECT * FROM t AS OF TIMESTAMP '2020-09-06 00:00:00';
START TRANSACTION READ ONLY AS OF TIMESTAMP '2020-09-06 00:00:00';
SET TRANSACTION READ ONLY as of timestamp '2020-09-06 00:00:00';
```

- Introduce a new statistics type `tidb_analyze_version = 2` (Experimental).

  `tidb_analyze_version` is set to 2 by default, which avoids the large errors that might occur in the large data volume caused by hash conflicts in Version 1 and maintains the estimation accuracy in most scenarios.

  User document

16.13.6.2.2 Transaction

- Support the Lock View feature (Experimental)

  The Lock View feature provides more information about lock conflicts and lock waits of pessimistic locks, which helps DBAs to observe transaction locking conditions and troubleshoot deadlock problems. #24199

  User document:

  - View the pessimistic locks and other locks that currently occur on all TiKV nodes in the clusters: `DATA_LOCK_WAITS`
  - View several deadlock errors that recently occurred on the TiDB nodes: `DEADLOCKS`
  - View the transaction information executed currently on the TiDB nodes: `TIDB_TRX`

16.13.6.2.3 Performance

- Stale read of data replicas (Experimental)

  Read local replicas data directly to reduce read latency and improve the query performance

  User document, #21094

- Enable the Hibernate Region feature by default.

  If a Region is in an inactive state for a long time, it is automatically set to a silent state, which reduces the system overhead of the heartbeat information between the Leader and the Follower.

  User document, #10266

16.13.6.2.4 Stability

- Solve the replication stability issue of TiCDC
  - Improve TiCDC memory usage to avoid OOM in the following scenarios
  - If large amounts of data is accumulated during the replication interruption, exceeding 1TB, the re-replication causes OOM problems.
  - Large amounts of data writes cause OOM problems in TiCDC.
  - Reduce the possibility of TiCDC replication interruption in the following scenarios:

    project#11

    * Replication interruption when the network is unstable
    * Replication interruption when some TiKV/PD/TiCDC nodes are down

- TiFlash storage memory control

  Optimize the speed and memory usage of Region snapshot generation and reduce the possibility of OOM

- Add a write rate limiter for TiKV background tasks (TiKV Write Rate Limiter)

  To ensure the duration stability of read and write requests, TiKV Write Rate Limiter smoothes the write traffic of TiKV background tasks such as GC and Compaction. The default value of TiKV background task write rate limiter is "0MB". It is recommended to set this value to the optimal I/O bandwidth of the disk, such as the maximum I/O bandwidth specified by the cloud disk manufacturer.

  User document, #9156

- Solve scheduling stability issues when multiple scaling tasks are performed at the same time

16.13.6.2.5 Telemetry

TiDB adds the running status of TiDB cluster requests in telemetry, including execution status and failure status.

To learn more about the information and how to disable this behavior, refer to Telemetry.

16.13.6.3 Improvements

- TiDB
  - Support the built-in function `VITESS_HASH()` #23915
  - Support pushing down data of the enumerated type to TiKV to improve performance when using enumerated types in `WHERE` clauses #23619

  - Support the `RENAME USER` syntax #23648
  - Optimize the calculation of Window Function to solve TiDB OOM problems when paging data with ROW_NUMBER() #23807
  - Optimize the calculation of `UNION ALL` to solve the TiDB OOM problems when using `UNION ALL` to join a large number of `SELECT` statements #21441
  - Optimize the dynamic pruning mode of partitioned tables to improve performance and stability #24150
  - Fix the `Region is Unavailable` issue that occurs in multiple scenarios project#62
  - Fix multiple `Region is Unavailable` issues that might occur in frequent scheduling situations
  - Fix `Region is Unavailable` issue that might occur in some high stress write situations
  - Avoid frequently reading the `mysql.stats_histograms` table if the cached statistics is up-to-date to avoid high CPU usage #24317

- TiKV

  - Use `zstd` to compress Region snapshots, preventing large space differences between nodes in case of heavy scheduling or scaling #10005
  - Solve OOM issues in multiple cases #10183
    * Add memory usage tracking for each module
    * Solve the OOM issue caused by oversized Raft entries cache
    * Solve the OOM issue caused by stacked GC tasks
    * Solve the OOM issue caused by fetching too many Raft entries from the Raft log to memory at one time
  - Split Regions more evenly to mitigate the issue that the growth of Region size exceeds the splitting speed when there are hotspot writes #9785

- TiFlash

  - Support `Union All`, `TopN`, and `Limit` functions
  - Support the Cartesian product including left outer join and semi anti join in MPP mode
  - Optimize lock operations to avoid that running DDL statements and read operations are blocked by each other
  - Optimize cleanup of expired data by TiFlash
  - Support further filtering of query filters on `timestamp` columns at the TiFlash storage level
  - Improve the startup and scalability speed of TiFlash when a large number of tables are in a cluster
  - Improve TiFlash compatibility when running on unknown CPUs

- PD

  - Avoid unexpected statistics after adding the `scatter region` scheduler #3602
  - Solve multiple scheduling issues in the scaling process
    * Optimize the generation process of replica snapshots to solve slow scheduling issues during scaling #3563 #10059 #10001
    * Solve slow scheduling issues caused by heartbeat pressure due to traffic changes #3693 #3739 #3728 #3751
    * Reduce the space discrepancies of large clusters due to scheduling, and optimize the scheduling formula to prevent the bursting issue (which is similar to heterogeneous space clusters) caused by large compression rate discrepancies #3592 #10005

- Tools
  - Backup & Restore (BR)
    * Support backing up and restoring system tables in the `mysql` schema #1143 #1078
    * Support the S3-compatible storage that is based on the virtual-host addressing mode #10243
    * Optimize the format of backupmeta to reduce memory usage #1171
  - TiCDC
    * Improve the descriptions of some log messages to be clearer and more useful for diagnosing problems #1759
    * Support the back pressure feature to allow the TiCDC scanning speed to sense the downstream processing capacity #10151
    * Reduce memory usage when TiCDC performs the initial scan #10133
    * Improve the cache hit rate for the TiCDC Old Value in pessimistic transactions #10089
  - Dumpling
    * Improve the logic of exporting data from TiDB v4.0 to avoid TiDB becoming out of memory (OOM) #273
    * Fix the issue that no error is output when a backup operation fails #280
  - TiDB Lightning
    * Improve data importing speed. The optimization results show that the speed of importing TPC-C data is increased by 30%, and the speed of importing large tables (2TB+) with more indexes (5 indexes) is increased by more than 50%. #753
    * Add a pre-check on the data to be imported and also on the target cluster before importing, and report errors to reject the import process if it does not meet the import requirements #999
    * Optimize the timing of checkpoint updates on the Local backend to improve performance of restarting from breakpoints#1080

16.13.6.4 Bug Fixes

- TiDB
  - Fix the issue that the execution result of project elimination might be wrong when the projection result is empty #23887
  - Fix the issue of wrong query results when a column contains `NULL` values in some cases #23891
  - Forbid generating MPP plans when the scan contains virtual columns #23886
  - Fix the wrong reuse of `PointGet` and `TableDual` in Plan Cache #23187 #23144 #23304 #23290
  - Fix the error that occurs when the optimizer builds the `IndexMerge` plan for clustered indexes #23906
  - Fix the type inference of the BIT-type errors #23832
  - Fix the issue that some optimizer hints do not take effect when the `PointGet` operator exists #23570
  - Fix the issue that DDL operations might fail when rolling back due to an error #23893
  - Fix the issue that the index range of the binary literal constant is incorrectly built #23672
  - Fix the potential wrong results of the `IN` clause in some cases #23889
  - Fix the wrong results of some string functions #23759
  - Users now need both `INSERT` and `DELETE` privileges on a table to perform `REPLACE` operations #23909
  - Users now need both `INSERT` and `DELETE` privileges on a table to perform `REPLACE` operations #24070
  - Fix the wrong `TableDual` plans caused by incorrectly comparing binaries and bytes#23846
  - Fix the panic issue caused by using the prefix index and index join in some cases #24547 #24716 #24717
  - Fix the issue that the prepared plan cache of `point get` is incorrectly used by the `point get` statement in the transaction #24741
  - Fix the issue of writing the wrong prefix index value when the collation is `ascii_bin` or `latin1_bin` #24569
  - Fix the issue that the ongoing transaction might be interrupted by the GC worker #24591
  - Fix a bug that the point query might get wrong on the clustered index when `new-collation` is enabled but `new-row-format` is disabled #24541
  - Refactor the conversion of partition keys for shuffle hash join #24490
  - Fix the panic issue that occurs when building the plan for queries that contain the `HAVING` clause #24045
  - Fix the issue that the column pruning improvement causes the `Apply` and `Join` operators' results to go wrong #23887
  - Fix a bug that the primary lock fallen back from async commit cannot be resolved #24384

  - Fix a GC issue of statistics that might cause duplicated fm-sketch records #24357
  - Avoid unnecessary pessimistic rollback when the pessimistic locking receives the `ErrKeyExists` error #23799
  - Fix the issue that numeric literals cannot be recognized when the sql_mode contains `ANSI_QUOTES` #24429
  - Forbid statements such as `INSERT INTO table PARTITION (<partitions>)... ON DUPLICATE KEY UPDATE` to read data from non-listed partitions #24746
  - Fix the potential `index out of range` error when a SQL statement contains both `GROUP BY` and `UNION` #24281
  - Fix the issue that the `CONCAT` function incorrectly handles the collation #24296
  - Fix the issue that the `collation_server` global variable does not take effect in new sessions #24156

- TiKV

  - Fix the issue that the coprocessor fails to properly handle the signed or unsigned integer types in the `IN` expression #9821
  - Fix the issue of many empty Regions after batch ingesting SST files #964
  - Fix a bug that TiKV cannot start up after the file dictionary file is damaged #9886
  - Fix a TiCDC OOM issue caused by reading old values #9996 #9981
  - Fix the issue of empty value in the secondary index for the clustered primary key column when collation is `latin1_bin` #24548
  - Add the `abort-on-panic` configuration, which allows TiKV to generate the core dump file when panic occurs. Users still need to correctly configure the environment to enable core dump #10216
  - Fix the performance regression issue of `point get` queries that occurs when TiKV is not busy #10046

- PD

  - Fix the issue that the PD Leader re-election is slow when there are many stores #3697
  - Fix the panic issue that occurs when removing the evict leader scheduler from a non-existent store #3660
  - Fix the issue that the statistics are not updated after offline peers are merged #3611

- TiFlash

  - Fix the issue of incorrect results when casting the time type to the integer type
  - Fix a bug that the `receiver` cannot find corresponding tasks within 10 seconds
  - Fix the issue that there might be invalid iterators in `cancelMPPQuery`
  - Fix a bug that the behavior of the `bitwise` operator is different from that of TiDB

  - Fix the alert issue caused by overlapping ranges when using the `prefix key`
  - Fix the issue of incorrect results when casting the string type to the integer type
  - Fix the issue that consecutive and fast writes might make TiFlash out of memory
  - Fix the potential issue that the exception of null pointer might be raised during the table GC
  - Fix the TiFlash panic issue that occurs when writing data to dropped tables
  - Fix the issue that TiFlash might panic during BR restore
  - Fix the issue of incorrect results when cloning shared delta index concurrently
  - Fix the potential panic that occurs when the Compaction Filter feature is enabled
  - Fix the issue that TiFlash cannot resolve the lock fallen back from async commit
  - Fix the issue of incorrect results returned when the casted result of the `TIMEZONE` type contains the `TIMESTAMP` type
  - Fix the TiFlash panic issue that occurs during Segment Split

- Tools

  - TiDB Lightning

    * Fix the issue of TiDB Lightning panic that occurs when generating KV data #1127
    * Fix a bug that the batch split Region fails due to the total key size exceeding the raft entry limit during the data import #969
    * Fix the issue that when importing CSV files, if the last line of the file does not contain line break characters (`\r\n`), an error will be reported #1133
    * Fix the issue that if a table to be imported includes an auto-increment column of the double type, the auto_increment value becomes abnormal #1178

  - Backup & Restore (BR)

    * Fix the issue of backup interruption caused by the failure of a few TiKV nodes #980

  - TiCDC

    * Fix the concurrency issue in Unified Sorter and filter the unhelpful error messages #1678
    * Fix a bug that the creation of redundant directories might interrupt the replication with MinIO #1463
    * Set the default value of the `explicit_defaults_for_timestamp` session variable to ON to make the MySQL 5.7 downstream keep the same behavior with the upstream TiDB #1585
    * Fix the issue that the incorrect handling of `io.EOF` might cause replication interruption #1633
    * Correct the TiKV CDC endpoint CPU metric in the TiCDC dashboard #1645
    * Increase `defaultBufferChanSize` to avoid replication blocking in some cases #1259
    * Fix the issue that the time zone information is lost in the Avro output #1712
    * Support cleaning up stale temporary files in Unified Sorter and forbid sharing the `sort-dir` directory #1742

    * Fix a deadlock bug in the KV client that occurs when many stale Regions exist #1599
    * Fix the wrong help information in the `--cert-allowed-cn` flag #1697
    * Revert the update for `explicit_defaults_for_timestamp` which requires the SUPER privilege when replicating data to MySQL #1750
    * Support the sink flow control to reduce the risk of memory overflow #1840
    * Fix a bug that the replication task might stop when moving a table #1828
    * Fix the issue that the TiKV GC safe point is blocked due to the stagnation of TiCDC changefeed checkpoint #1759

16.14 v5.0

16.14.1 TiDB 5.0.6 Release Notes

Release date: December 31, 2021

TiDB version: 5.0.6

16.14.1.1 Compatibility changes

- Tools
    - TiCDC
        * Change the output of the `cdc server` command error from stdout to stderr #3133
        * Set the default value of Kafka sink `max-message-bytes` to `10M` #3081
        * Change the default value of Kafka Sink `partition-num` to 3 so that TiCDC distributes messages across Kafka partitions more evenly #3337

16.14.1.2 Improvements

- TiDB
    - Show the affected SQL statements in the debug log when the coprocessor encounters a lock, which is helpful in diagnosing problems #27718
- TiKV
    - Increase the speed of inserting SST files by moving the verification process to the `Import` thread pool from the `Apply` thread pool #11239
    - Add more metrics for the garbage collection module of Raft logs to locate performance problems in the module #11374
    - Collapse some uncommon storage-related metrics in Grafana dashboard #11681

- PD
  - Speed up the exit process of schedulers #4146
  - Make the scheduling results of the `scatter-range-scheduler` scheduler more even by allowing the scheduler to schedule empty Regions and fix the configurations of the scheduler #4497
  - Support that the evict leader scheduler can schedule Regions with unhealthy peers #4093
- Tools
  - TiCDC
    * Optimize rate limiting control on TiKV reloads to reduce gPRC congestion during changefeed initialization #3110
    * Add a tick frequency limit to EtcdWorker to prevent frequent etcd writes from affecting PD services #3112
    * Add the default configuration for `config.Metadata.Timeout` in Kafka sink #3352
    * Set the default value of `max-message-bytes` to `10M`, to reduce the probability that Kafka messages cannot be sent #3081
    * Add more Prometheus and Grafana monitoring metrics and alerts, including `no owner alert`, `mounter row`, `table sink total row`, and `buffer sink total row` #4054 #1606
  - Backup & Restore (BR)
    * Retry BR tasks when encountering the PD request error or the TiKV I/O timeout error #27787
    * Improve the robustness of restoring #27421
  - TiDB Lightning
    * Support importing data into tables that have expression index or the index that depends on virtual generated columns #1404

16.14.1.3 Bug fixes

- TiDB
  - Fix the issue that optimistic transaction conflicts might cause transactions to block each other #11148
  - Fix the issue of false positive error log `invalid cop task execution summaries length` for MPP queries #1791
  - Fix the panic that might occur when DML and DDL statements are executed concurrently #30940
  - Fix the `privilege check fail` error when performing the `grant` and `revoke` operations to grant and revoke global level privileges #29675

- Fix the TiDB panic when executing the `ALTER TABLE.. ADD INDEX` statement in some cases #27687
- Fix the issue that the `enforce-mpp` configuration does not take effect in v5.0.4 #29252
- Fix the panic when using the `CASE WHEN` function on the `ENUM` data type #29357
- Fix wrong results of the `microsecond` function in vectorized expressions #29244
- Fix the issue of incomplete log information from the `auto analyze` result #29188
- Fix wrong results of the `hour` function in vectorized expression #28643
- Fix the unexpected error like `tidb_cast to Int32 is not supported` when the unsupported `cast` is pushed down to TiFlash #23907
- Fix a bug that the availability detection of MPP node does not work in some corner cases #3118
- Fix the `DATA RACE` issue when assigning `MPP task ID` #27952
- Fix the `INDEX OUT OF RANGE` error for a MPP query after deleting an empty `dual table` #28250
- Fix the TiDB panic when inserting invalid date values concurrently #25393
- Fix the unexpected `can not found column in Schema column` error for queries in the MPP mode #30980
- Fix the issue that TiDB might panic when TiFlash is shuting down #28096
- Fix the unexpected `index out of range` error when the planner is doing join reorder #24095
- Fix wrong results of the control functions (such as `IF` and `CASE WHEN`) when using the `ENUM` type data as parameters of such functions #23114
- Fix the wrong result of `CONCAT(IFNULL(TIME(3))` #29498
- Fix wrong results of `GREATEST` and `LEAST` when passing in unsigned `BIGINT` arguments #30101
- Fix the issue that a SQL operation is canceled when its JSON type column joins its `CHAR` type column #29401
- Fix the data inconsistency issue caused by incorrect usage of lazy existence check and untouched key optimization #30410
- Fix the issue that window functions might return different results when using a transaction or not #29947
- Fix the issue that the SQL statements that contain `cast(integer as char) union string` return wrong results #29513
- Fix the issue that the length information is wrong when casting `Decimal` to `String` #29417
- Fix the issue that the `Column 'col_name' in field list is ambiguous` error is reported unexpectedly when a SQL statement contains natural join #25041
- Fix the issue that the `GREATEST` function returns inconsistent results due to different values of `tidb_enable_vectorized_expression` (set to `on` or `off`) #29434
- Fix the issue that the planner might cache invalid plans for `join` in some cases #28087
- Fix the issue that the `index out of range [1] with length 1` error is reported when a SQL statement evaluates an aggregation result on the result of join in some cases #1978

- TiKV
  - Fix the issue that a down TiKV node causes the resolved timestamp to lag #11351
  - Fix the issue that batch messages are too large in Raft client implementation #9714
  - Fix a panic issue that occurs when Region merge, ConfChange, and Snapshot happen at the same time in extreme conditions #11475
  - Fix the issue that TiKV cannot detect the memory lock when TiKV perform a reverse table scan #11440
  - Fix the issue of negative sign when the decimal divide result is zero #29586
  - Fix the issue that the accumulation of GC tasks might cause TiKV to be OOM (out of memory) #11410
  - Fix the issue that the average latency of the by-instance gRPC requests is inaccurate in TiKV metrics #11299
  - Fix a memory leak caused by monitoring data of statistics threads #11195
  - Fix the issue of TiCDC panic that occurs when the downstream database is missing #11123
  - Fix the issue that TiCDC adds scan retries frequently due to the Congest error #11082
  - Fix the issue that the Raft connection is broken when the channel is full #11047
  - Fix the issue of TiKV panic that occurs when the files do not exist when TiDB Lightning imports data #10438
  - Fix the issue that TiDB cannot correctly identify whether the `Int64` types in `Max`/`Min` functions are a signed integer or not, which causes the wrong calculation result of `Max`/`Min` #10158
  - Fix the issue that the node of a TiKV replica is down after the node gets snapshots because TiKV cannot modify the metadata accurately #10225
  - Fix the leak issue of the backup thread pool #10287
  - Fix the issue of casting illegal strings into floating-point numbers #23322
- PD
  - Fix a panic issue that occurs after the TiKV node is removed #4344
  - Fix the issue that operator can get blocked due to down store #3353
  - Fix slow leader election caused by stucked Region syncer #3936
  - Fix the issue that the speed of removing peers is limited when repairing the down nodes #4090
  - Fix the issue that the hotspot cache cannot be cleared when the Region heartbeat is less than 60 seconds #4390
- TiFlash
  - Fix potential data inconsistency after altering a primary key column to a larger int data type
  - Fix the issue that TiFlash fails to start up on some platforms, such as ARM, due to the absence of the `libnsl.so` library

  - Fix the issue that the `Store size` metric does not match the actual data size on a disk
  - Fix the issue that TiFlash crashes due to a `Cannot open file` error
  - Fix occasional crashes of TiFlash when an MPP query is killed
  - Fix the unexpected error `3rd arguments of function substringUTF8 must be constants`
  - Fix query failures caused by excessive `OR` conditions
  - Fix the bug that results of `where <string>` are wrong
  - Fix inconsistent behaviors of `CastStringAsDecimal` between TiFlash and TiDB/TiKV
  - Fix query failures caused by the error `different types: expected Nullable(Int64), got Int64`
  - Fix query failures caused by the error `Unexpected type of column: Nullable(Nothing)`
  - Fix query failures caused by overflow when comparing data in the `DECIMAL` data type

- Tools

  - TiCDC

    * Fix the issue that some partitioned tables without valid indexes might be ignored when `force-replicate` is enabled #2834
    * Fix the issue that `cdc cli` silently truncates user parameters when receiving unexpected parameters, causing the user input parameters to be lost #2303
    * Fix the issue that TiCDC sync task might pause when an error occurs during writing a Kafka message #2978
    * Fix a possible panic issue when encoding some types of columns into Open Protocol format #2758
    * Fix the issue that Kafka may send excessively large messages by setting the default value of `max-message-bytes` to `10M` #3081
    * Fix the issue that TiCDC replication task might terminate when the upstream TiDB instance unexpectedly exits #3061
    * Fix the issue that TiCDC process might panic when TiKV sends duplicate requests to the same Region #2386
    * Fix the TiCDC replication interruption issue when multiple TiKVs crash or during a forced restart #3288
    * Fix the negative value error in the changefeed checkpoint lag #3010
    * Fix the issue of overly frequent warnings caused by MySQL sink deadlock #2706
    * Fix the issue that Avro sink does not support parsing JSON type columns #3624
    * Fix the bug that TiCDC reads the incorrect schema snapshot from TiKV when the TiKV owner restarts #2603
    * Fix the memory leak issue after processing DDLs #3174

    * Fix the bug that the `enable-old-value` configuration item is not automatically set to `true` on Canal and Maxwell protocols #3676
    * Fix the timezone error that occurs when the `cdc server` command runs on some Red Hat Enterprise Linux releases (such as 6.8 and 6.9) #3584
    * Fix the issue of the inaccurate `txn_batch_size` monitoring metric for Kafka sink #3431
    * Fix the issue that `tikv_cdc_min_resolved_ts_no_change_for_1m` keeps alerting when there is no changefeed #11017
    * Fix the TiCDC panic issue that occurs when manually cleaning the task status in etcd #2980
    * Fix the issue that changefeed does not fail fast enough when the ErrGCTTLExceeded error occurs #3111
    * Fix the issue that scanning stock data might fail due to TiKV performing GC when scanning stock data takes too long #2470
    * Fix OOM in container environments #1798
  - Backup & Restore (BR)
    * Fix a bug that the average speed is inaccurately calculated for backup and restore #1405
  - Dumpling
    * Fix the bug that Dumpling becomes very slow when dumping tables with the composite primary key or unique key #29386

16.14.2 TiDB 5.0.5 Release Note

Release date: December 3, 2021

TiDB version: 5.0.5

16.14.2.1 Bug fix

- TiKV
  - Fix the issue that the `GcKeys` task does not work when it is called by multiple keys. Caused by this issue, compaction filter GC might not drop the MVCC deletion information. #11217

16.14.3 TiDB 5.0.4 Release Notes

Release Date: September 27, 2021

TiDB version: 5.0.4

16.14.3.1 Compatibility changes

- TiDB
  - Fix the issue that executing `SHOW VARIABLES` in a new session is slow. This fix reverts some changes made in #19341 and might cause compatibility issues. #24326
  - Change the default value of the `tidb_stmt_summary_max_stmt_count` variable from `200` to `3000` #25873
  - The following bug fixes change execution results, which might cause upgrade incompatibilities:
    * Fix the issue that TiDB returns wrong result when the children of `UNION` contain the `NULL` value #26559
    * Fix the issue that `greatest(datetime)union null` returns empty string #26532
    * Fix the issue that the behavior of the `last_day` function is incompatible in SQL mode #26000
    * Fix the issue that the `having` clause might not work correctly #26496
    * Fix the wrong execution results that occur when the collations around the `between` expression are different #27146
    * Fix the wrong execution results that occur when the column in the `group_concat` function has a non-bin collation #27429
    * Fix an issue that using a `count(distinct)` expression on multiple columns returns wrong result when the new collation is enabled #27091
    * Fix the result wrong that occurs when the argument of the `extract` function is a negative duration #27236
    * Fix the issue that inserting an invalid date does not report an error when the `SQL_MODE` is 'STRICT_TRANS_TABLES' #26762
    * Fix the issue that using an invalid default date does not report an error when the `SQL_MODE` is 'NO_ZERO_IN_DATE' #26766
    * Fix a bug on the query range of prefix index #26029
    * Fix the issue that the `LOAD DATA` statement might abnormally import non-utf8 data #25979
    * Fix the issue that `insert ignore on duplicate update` might insert wrong data when the secondary index has the same column with the primary key #25809
    * Fix the issue that `insert ignore duplicate update` might insert wrong data when a partitioned table has a clustered index #25846
    * Fix the issue that the query result might be wrong when the key is the `ENUM` type in point get or batch point get #24562
    * Fix the wrong result that occurs when dividing a `BIT`-type value #23479
    * Fix the issue that the results of `prepared` statements and direct queries might be inconsistent #22949
    * Fix the issue that the query result might be wrong when a `YEAR` type is compared with a string or an integer type #23262

16.14.3.2 Feature enhancements

- TiDB
  - Support setting `tidb_enforce_mpp=1` to ignore the optimizer estimation and forcibly use the MPP mode #26382
- TiKV
  - Support changing TiCDC configurations dynamically #10645
- PD
  - Add OIDC-based SSO support for TiDB Dashboard #3884
- TiFlash
  - Support the `HAVING()` function in DAG requests
  - Support the `DATE()` function
  - Add Grafana panels for write throughput per instance

16.14.3.3 Improvements

- TiDB
  - Trigger auto-analyze based on the histogram row count #24237
  - Stop sending requests to a TiFlash node for a period if the node has failed and restarted before #26757
  - Increase the `split region` upper limit to make `split table` and `presplit` more stable #26657
  - Support retry for MPP queries #26483
  - Check the availability of TiFlash before launching MPP queries #1807
  - Support the stable result mode to make the query result more stable #26084
  - Support the MySQL system variable `init_connect` and its associated features #18894
  - Thoroughly push down the `COUNT(DISTINCT)` aggregation function in the MPP mode #25861
  - Print log warnings when the aggregation function cannot be pushed down in `EXPLAIN` statements #25736
  - Add error labels for `TiFlashQueryTotalCounter` in Grafana dashboard #25327
  - Support getting the MVCC data of a clustered index table through a secondary index by HTTP API #24209
  - Optimize the memory allocation of `prepared` statement in parser #24371
- TiKV

  - Handle read ready and write ready separately to reduce read latency #10475
  - Reduce the size of Resolved TS messages to save network bandwidth #2448
  - Drop log instead of blocking threads when the slogger thread is overloaded and the queue is filled up #10841
  - Make the slow log of TiKV coprocessor only consider the time spent on processing requests #10841
  - Make prewrite as idempotent as possible to reduce the chance of undetermined errors #10587
  - Avoid the false "GC can not work" alert under low write flow #10662
  - Make the database to be restored always match the original cluster size during backup. #10643
  - Ensure that the panic output is flushed to the log #9955

- PD

  - Improve the performance of synchronizing Region information between PDs #3993

- Tools

  - Dumpling

    * Support backing up MySQL-compatible databases that do not support the `START TRANSACTION ... WITH CONSISTENT SNAPSHOT` or the `SHOW CREATE TABLE` syntax #309

  - TiCDC

    * Optimize memory management when Unified Sorter is using memory to sort #2553
    * Prohibit operating TiCDC clusters across major or minor versions #2598
    * Reduce the goroutine usage when a table's Regions are all transferred away from a TiKV node #2284
    * Remove `file sorter` #2326
    * Always pull the old values from TiKV and the output is adjusted according to `enable-old-value` #2301
    * Improve the error message returned when a PD endpoint misses the certificate #1973
    * Optimize workerpool for fewer goroutines when concurrency is high #2211
    * Add a global gRPC connection pool and share gRPC connections among KV clients #2533

16.14.3.4 Bug Fixes

- TiDB

- Fix the issue that TiDB might panic when querying a partitioned table and the partition key has the `IS NULL` condition #23802
- Fix the issue that the overflow check of the `FLOAT64` type is different with that of MySQL #23897
- Fix the wrong character set and collation for the `case when` expression #26662
- Fix the issue that committing pessimistic transactions might cause write conflicts #25964
- Fix a bug that the index keys in a pessimistic transaction might be repeatedly committed #26359 #10600
- Fix the issue that TiDB might panic when resolving the async commit locks #25778
- Fix a bug that a column might not be found when using `INDEX MERGE` #25045
- Fix a bug that `ALTER USER REQUIRE SSL` clears users' `authentication_string` #25225
- Fix a bug that the value of the `tidb_gc_scan_lock_mode` global variable on a new cluster shows "PHYSICAL" instead of the actual default mode "LEGACY" #25100
- Fix the bug that the `TIKV_REGION_PEERS` system table does not show the correct `DOWN` status #24879
- Fix the issue of memory leaks that occurs when HTTP API is used #24649
- Fix the issue that views do not support `DEFINER` #24414
- Fix the issue that `tidb-server --help` exits with the code `2` #24046
- Fix the issue that setting the global variable `dml_batch_size` does not take effect #24709
- Fix the issue that using `read_from_storage` and partitioned table at the same time causes an error #20372
- Fix the issue that TiDB panics when executing the projection operator #24264
- Fix the issue that statistics might cause queries to panic #24061
- Fix the issue that using the `approx_percentile` function on a `BIT` column might panic #23662
- Fix the issue that the metrics on the **Coprocessor Cache** panel in Grafana are wrong #26338
- Fix the issue that concurrently truncating the same partition causes DDL statements to stuck #26229
- Fix the issue of wrong query results that occurs when the session variable is used as the `GROUP BY` item #27106
- Fix the wrong implicit conversion between `VARCHAR` and timestamp when joining tables #25902
- Fix the wrong results in associated subquery statements #27233

- TiKV

  - Fix the potential disk full issue caused by corrupted snapshot files #10813
  - Fix the TiKV panic issue that occurs when upgrading from a pre-5.0 version with Titan enabled #10843

  - Fix the issue that TiKV of a newer version cannot be rolled back to v5.0.x #10843
  - Fix the TiKV panic issue that occurs when upgrading from a pre-5.0 version to a 5.0 version or later. If a cluster was upgraded from TiKV v3.x with Titan enabled before the upgrade, this cluster might encounter the issue. #10774
  - Fix the parsing failure caused by the left pessimistic locks #26404
  - Fix the panic that occurs when calculating duration on certain platforms #10571
  - Fix the issue that the keys of `batch_get_command` in Load Base Split are unencoded #10542

- PD

  - Fix the issue that PD does not fix the down peers in time #4077
  - Fix the issue that the replica count of the default placement rules stays constant after `replication.max-replicas` is updated #3886
  - Fix a bug that PD might panic when scaling out TiKV #3868
  - Fix the scheduling conflict issue that occurs when multiple schedulers are running at same time #3807
  - Fix the issue that the scheduler might appear again even if it has been deleted #2572

- TiFlash

  - Fix the potential panic issue that occurs when running table scan tasks
  - Fix the potential memory leak issue that occurs when executing MPP tasks
  - Fix a bug that TiFlash raises the `duplicated region` error when handling DAQ requests
  - Fix the issue of unexpected results when executing the aggregation functions `COUNT` or `COUNT DISTINCT`
  - Fix the potential panic issue that occurs when executing MPP tasks
  - Fix a potential bug that TiFlash cannot restore data when deployed on multiple disks
  - Fix the potential panic issue that occurs when deconstructing `SharedQueryBlockInputStream` ↪
  - Fix the potential panic issue that occurs when deconstructing `MPPTask`
  - Fix the issue of unexpected results when TiFlash fails to establish MPP connections
  - Fix the potential panic issue that occurs when resolving locks
  - Fix the issue that the store size in metrics is inaccurate under heavy writing
  - Fix a bug of incorrect results that occurs when queries contain filters like `CONSTANT` ↪ , `<`, `<=`, `>`, `>=`, or `COLUMN`
  - Fix the potential issue that TiFlash cannot garbage-collect the delta data after running for a long time
  - Fix a potential bug that metrics display wrong values
  - Fix the potential issue of data inconsistency that occurs when TiFlash is deployed on multiple disks

- Tools
  - Dumpling
    * Fix the issue that the execution of `show table status` is stuck in MySQL 8.0.3 or a later version #322
  - TiCDC
    * Fix the issue of process panic that occurs when encoding the data types such as `mysql.TypeString`, `mysql.TypeVarString`, `mysql.TypeVarchar` into JSON #2758
    * Fix a data inconsistency issue that occurs because multiple processors might write data to the same table when this table is being re-scheduled #2417
    * Decrease the gRPC window size to avoid the OOM that occurs when TiCDC captures too many Regions #2724
    * Fix the error that the gRPC connection is frequently broken when the memory pressure is high #2202
    * Fix a bug that causes TiCDC to panic on the unsigned `TINYINT` type #2648
    * Fix the issue that TiCDC Open Protocol outputs an empty value when inserting a transaction and deleting data of the same row in the upstream #2612
    * Fix a bug that DDL handling fails when a changefeed starts at the finish TS of a schema change #2603
    * Fix the issue that irresponsive downstreams interrupt the replication task in old owner until the task times out #2295
    * Fix a bug in metadata management #2558
    * Fix the issue of data inconsistency that occurs after the TiCDC owner switch #2230
    * Fix the issue that outdated capture might appear in the output of the `capture list` command #2388
    * Fix the `ErrSchemaStorageTableMiss` error that occurs when the DDL Job duplication is encountered in the integrated test #2422
    * Fix the bug that a changefeed cannot be removed if the `ErrGCTTLExceeded` error occurs #2391
    * Fix a bug that replicating large tables to cdclog fails #1259 #2424
    * Fix the CLI backward compatibility issue #2373
    * Fix the issue of insecure concurrent access to the map in `SinkManager` #2299
    * Fix the issue of potential DDL loss when the owner crashes when executing DDL statements #1260
    * Fix the issue that the lock is resolved immediately after a Region is initialized #2188
    * Fix the issue of extra partition dispatching that occurs when adding a new partitioned table #2263
    * Fix the issue that TiCDC keeps warning on removed changefeeds #2156

16.14.4 TiDB 5.0.3 Release Notes

Release date: July 2, 2021

TiDB version: 5.0.3

16.14.4.1 Compatibility Changes

- TiDB
  - After a v4.0 cluster is upgraded to v5.0 or a later version (dev or v5.1), the default value of the `tidb_multi_statement_mode` variable changes from `WARN` to `OFF`
  - TiDB is now compatible with MySQL 5.7's noop variable `innodb_default_row_format` ↪ . Setting this variable will have no effect. #23541

16.14.4.2 Feature Enhancements

- Tools
  - TiCDC
    * Add an HTTP API to get the changefeed information and the health information of the node #1955
    * Add the SASL/SCRAM support for the kafka sink #1942
    * Make TiCDC support `--data-dir` at the server level #2070

16.14.4.3 Improvements

- TiDB
  - Support pushing down the `TopN` operator to TiFlash #25162
  - Support pushing down the built-in function `json_unquote()` to TiKV #24415
  - Support removing the union branch from the dual table #25614
  - Support pushing down the built-in function `replace()` to TiFlash #25565
  - Support pushing down the built-in functions `unix_timestamp()`, `concat()`, `year` ↪ `()`, `day()`, `datediff()`, `datesub()`, and `concat_ws()` to TiFlash #25564
  - Optimize the aggregate operator's cost factor #25241
  - Support pushing down the `Limit` operator to TiFlash #25159
  - Support pushing down the built-in function `str_to_date` to TiFlash #25148
  - Allow the MPP outer join to choose the build table based on the table row count #25142
  - Support pushing down the built-in functions `left()`, `right()`, and `abs()` to TiFlash #25133
  - Support pushing down the Broadcast Cartesian join to TiFlash #25106
  - Support pushing down the `Union All` operator to TiFlash #25051

  - Support balancing the MPP query workload among different TiFlash nodes based on Regions #24724
  - Support invalidating stale Regions in the cache after the MPP query is executed #24432
  - Improve the MySQL compatibility of the built-in function `str_to_date` for the format specifiers `%b/%M/%r/%T` #25767

- TiKV

  - Limit the TiCDC sink's memory consumption #10305
  - Add the memory-bounded upper limit for the TiCDC old value cache #10313

- PD

  - Update TiDB Dashboard to v2021.06.15.1 #3798

- TiFlash

  - Support casting the `STRING` type to the `DOUBLE` type
  - Support the `STR_TO_DATE()` function
  - Optimize the non-joined data in right outer join using multiple threads
  - Support the Cartesian join
  - Support the `LEFT()` and `RIGHT()` functions
  - Support automatically invalidating stale Regions in MPP queries
  - Support the `ABS()` function

- Tools

  - TiCDC

    * Refine gRPC's reconnection logic and increase the KV client's throughput #1586 #1501 #1682 #1393 #1847 #1905 #1904
    * Make the sorter I/O errors more user-friendly

16.14.4.4 Bug Fixes

- TiDB

  - Fix the issue that an incorrect result is returned when using merge join on the `SET` type column #25669
  - Fix the data corruption issue in the `IN` expression's arguments #25591
  - Avoid the sessions of GC being affected by global variables #24976
  - Fix the panic issue that occurs when using `limit` in the window function queries #25344
  - Fix the wrong value returned when querying a partitioned table using `Limit` #24636

  - Fix the issue that `IFNULL` does not correctly take effect on the `ENUM` or `SET` type column #24944
  - Fix the wrong results caused by changing the `count` in the join subqueries to `first_row` #24865
  - Fix the query hang issue that occurs when `ParallelApply` is used under the `TopN` operator #24930
  - Fix the issue that more results than expected are returned when executing SQL statements using multi-column prefix indexes #24356
  - Fix the issue that the `<=>` operator cannot correctly take effect #24477
  - Fix the data race issue of the parallel `Apply` operator #23280
  - Fix the issue that the `index out of range` error is reported when sorting the IndexMerge results of the PartitionUnion operator #23919
  - Fix the issue that setting the `tidb_snapshot` variable to an unexpectedly large value might damage the transaction isolation #25680
  - Fix the issue that the ODBC-styled constant (for example, `{d '2020-01-01'}`) cannot be used as the expression #25531
  - Fix the issue that `SELECT DISTINCT` converted to `Batch Get` causes incorrect results #25320
  - Fix the issue that backing off queries from TiFlash to TiKV cannot be triggered #23665 #24421
  - Fix the `index-out-of-range` error that occurs when checking `only_full_group_by` ↪ #23839)
  - Fix the issue that the result of index join in correlated subqueries is wrong #25799

- TiKV

  - Fix the wrong `tikv_raftstore_hibernated_peer_state` metric #10330
  - Fix the wrong arguments type of the `json_unquote()` function in the coprocessor #10176
  - Skip clearing callback during graceful shutdown to avoid breaking ACID in some cases #10353 #10307
  - Fix a bug that the read index is shared for replica reads on a Leader #10347
  - Fix the wrong function that casts `DOUBLE` to `DOUBLE` #25200

- PD

  - Fix the data race issue that occurs when loading TTL configurations after the scheduler is started #3771
  - Fix a bug that the `is_learner` field of the `TIKV_REGION_PEERS` table in TiDB is incorrect #3372 #24293
  - Fix the issue that when all TiKV nodes in a zone are offline or down, PD does not schedule replicas to other zones #3705
  - Fix the issue that PD might get panic after the scatter Region scheduler is added #3762

- TiFlash

  - Fix the issue that TiFlash keeps restarting because of the split failure
  - Fix the potential issue that TiFlash cannot delete the delta data
  - Fix a bug that TiFlash adds wrong padding for non-binary characters in the `CAST` function
  - Fix the issue of incorrect results when handling aggregation queries with complex `GROUP BY` columns
  - Fix the TiFlash panic issue that occurs under heavy write pressure
  - Fix the panic that occurs when the right jon key is not nullalbe and the left join key is nullable
  - Fix the potential issue that the `read-index` requests take a long time
  - Fix the panic issue that occurs when the read load is heavy
  - Fix the panic issue that might occur when the `Date_Format` function is called with the `STRING` type argument and `NULL` values

- Tools

  - TiCDC

    * Fix the issue that TiCDC owner exits when refreshing the checkpoint #1902
    * Fix a bug that some MySQL connection might leak after MySQL sink meets the error and pauses #1946
    * Fix the panic issue that occurs when TiCDC fails to read `/proc/meminfo` #2024
    * Reduce TiCDC's runtime memory consumption #2012 #1958
    * Fix a bug that might cause TiCDC server panic due to the late calculation of resolved ts #1576
    * Fix the potential deadlock issue for the processor #2142

  - Backup & Restore (BR)

    * Fix a bug that all system tables are filtered during restore #1197 #1201
    * Fix the issue that Backup & Restore reports the error of "file already exists" when TDE is enabled during the restore #1179

  - TiDB Lightning

    * Fix the TiDB Lightning panic issue for some special data #1213
    * Fix the EOF error reported when TiDB Lightning splits the imported large CSV files #1133
    * Fix a bug that an excessively large base value is generated when TiDB Lightning imports tables with the `auto_increment` column of the `FLOAT` or `DOUBLE` type #1186
    * Fix the issue that TiDB fails to parse the `DECIMAL` type data in Parquet files #1277

16.14.5 TiDB 5.0.2 Release Notes

Release date: June 10, 2021

TiDB version: 5.0.2

16.14.5.1 Compatibility Changes

- Tools
  - TiCDC
    * Deprecate `--sort-dir` in the `cdc cli changefeed` command. Instead, users can set `--sort-dir` in the `cdc server` command. #1795

16.14.5.2 New Features

- TiKV
  - Enable the Hibernate Region feature by default #10266

16.14.5.3 Improvements

- TiDB
  - Avoid frequently reading the `mysql.stats_histograms` table if the cached statistics is up-to-date to avoid high CPU usage #24317
- TiKV
  - BR now supports the S3-compatible storage using the virtual-host addressing mode #10243
  - Support the back pressure for TiCDC's scan speed #10151
  - Reduce the memory usage of TiCDC's initial scan #10133
  - Improve the cache hit ratio of the TiCDC's Old Value feature in the pessimistic transaction #10089
  - Split Regions more evenly to mitigate the issue that the growth of Region size exceeds the splitting speed when there are hotspot writes #9785
- TiFlash
  - Optimize the table lock to prevent DDL jobs and data reads from blocking each other
  - Support casting the `INTEGER` or `REAL` type to `REAL` type
- Tools
  - TiCDC
    * Add monitoring metrics for the table memory consumption #1885
    * Optimize the memory and CPU usages during the sorting stage #1863
    * Delete some useless log information that might cause user confusion #1759

  - Backup & Restore (BR)
    * Clarify some ambiguous error messages #1132
    * Support checking the cluster version of a backup #1091
    * Support backing up and restoring system tables in the `mysql` schema #1143 #1078
  - Dumpling
    * Fix the issue that no error is output when a backup operation fails #280

16.14.5.4 Bug Fixes

- TiDB
  - Fix the panic issue caused by using the prefix index and index join in some cases #24547 #24716 #24717
  - Fix the issue that the prepared plan cache of `point get` is incorrectly used by the `point get` statement in the transaction #24741
  - Fix the issue of writing the wrong prefix index value when the collation is `ascii_bin` or `latin1_bin` #24569
  - Fix the issue that the ongoing transaction might be interrupted by the GC worker #24591
  - Fix a bug that the point query might get wrong on the clustered index when `new-collation` is enabled but `new-row-format` is disabled #24541
  - Refactor the conversion of partition keys for shuffle hash join #24490
  - Fix the panic issue that occurs when building the plan for queries that contain the `HAVING` clause #24045
  - Fix the issue that the column pruning improvement causes the `Apply` and `Join` operators' results to go wrong #23887
  - Fix a bug that the primary lock fallen back from async commit cannot be resolved #24384
  - Fix a GC issue of statistics that might cause duplicated fm-sketch records #24357
  - Avoid unnecessary pessimistic rollback when the pessimistic locking receives the `ErrKeyExists` error #23799
  - Fix the issue that numeric literals cannot be recognized when the sql_mode contains `ANSI_QUOTES` #24429
  - Forbid statements such as `INSERT INTO table PARTITION (<partitions>)... ↪ ON DUPLICATE KEY UPDATE` to read data from non-listed partitions #24746
  - Fix the potential `index out of range` error when a SQL statement contains both `GROUP BY` and `UNION` #24281
  - Fix the issue that the `CONCAT` function incorrectly handles the collation #24296
  - Fix the issue that the `collation_server` global variable does not take effect in new sessions #24156

- TiKV

  - Fix a TiCDC OOM issue caused by reading old values #9996 #9981
  - Fix the issue of empty value in the secondary index for the clustered primary key column when collation is `latin1_bin` #24548
  - Add the `abort-on-panic` configuration, which allows TiKV to generate the core dump file when panic occurs. Users still need to correctly configure the environment to enable core dump #10216
  - Fix the performance regression issue of `point get` queries that occurs when TiKV is not busy #10046

- PD

  - Fix the issue that the PD Leader re-election is slow when there are many stores #3697
  - Fix the panic issue that occurs when removing the evict leader scheduler from a non-existent store #3660
  - Fix the issue that the statistics are not updated after offline peers are merged #3611

- TiFlash

  - Fix the issue of incorrect results when cloning shared delta index concurrently
  - Fix the potential issue that TiFlash fails to restart with incomplete data
  - Fix the issue that old dm files are not removed automatically
  - Fix the potential panic that occurs when the Compaction Filter feature is enabled
  - Fix the potential issue that `ExchangeSender` sends duplicated data
  - Fix the issue that TiFlash cannot resolve the lock fallen back from async commit
  - Fix the issue of incorrect results returned when the casted result of the `TIMEZONE` type contains the `TIMESTAMP` type
  - Fix the TiFlash panic issue that occurs during Segment Split
  - Fix the issue that the execution information about the non-root MPP task is not accurate

- Tools

  - TiCDC

    * Fix the issue that the time zone information is lost in the Avro output #1712
    * Support cleaning up stale temporary files in Unified Sorter and forbid sharing the `sort-dir` directory #1742
    * Fix a deadlock bug in the KV client that occurs when many stale Regions exist #1599
    * Fix the wrong help information in the `--cert-allowed-cn` flag #1697
    * Revert the update for `explicit_defaults_for_timestamp` which requires the `SUPER` privilege when replicating data to MySQL #1750
    * Support the sink flow control to reduce the risk of memory overflow #1840
    * Fix a bug that the replication task might stop when moving a table #1828

    * Fix the issue that the TiKV GC safe point is blocked due to the stagnation of TiCDC changefeed checkpoint #1759

  - Backup & Restore (BR)

    * Fix the issue that the `DELETE` events are lost during the log restore #1063
    * Fix a bug that causes BR to send too many useless RPC requests to TiKV #1037
    * Fix the issue that no error is output when a backup operation fails #1043

  - TiDB Lightning

    * Fix the issue of TiDB Lightning panic that occurs when generating KV data #1127
    * Fix the issue that TiDB Lightning in the TiDB-backend mode cannot load any data when the autocommit is disabled #1104
    * Fix a bug that the batch split Region fails due to the total key size exceeding the raft entry limit during the data import #969

16.14.6 TiDB 5.0.1 Release Notes

Release date: April 24, 2021

TiDB version: 5.0.1

16.14.6.1 Compatibility change

- The default value of the `committer-concurrency` configuration item is changed from `16` to `128`.

16.14.6.2 Improvements

- TiDB

  - Support the built-in function `VITESS_HASH()` #23915

- TiKV

  - Use `zstd` to compress the Region snapshot #10005

- PD

  - Modify the Region score calculator to better satisfy isomerous stores #3605
  - Avoid unexpected statistics after adding the `scatter region` scheduler #3602

- Tools

  - Backup & Restore (BR)

    * Remove some misleading information from the summary log #1009

16.14.6.3 Bug Fixes

- TiDB
  - Fix the issue that the execution result of project elimination might be wrong when the projection result is empty #24093
  - Fix the issue of wrong query results when a column contains `NULL` values in some cases #24063
  - Forbid generating MPP plans when the scan contains virtual columns #24058
  - Fix the wrong reuse of `PointGet` and `TableDual` in Plan Cache #24043
  - Fix the error that occurs when the optimizer builds the `IndexMerge` plan for clustered indexes #24042
  - Fix the type inference of the BIT-type errors #24027
  - Fix the issue that some optimizer hints do not take effect when the `PointGet` operator exists #23685
  - Fix the issue that DDL operations might fail when rolling back due to an error #24080
  - Fix the issue that the index range of the binary literal constant is incorrectly built #24041
  - Fix the potential wrong results of the `IN` clause in some cases #24023
  - Fix the wrong results of some string functions #23879
  - Users now need both `INSERT` and `DELETE` privileges on a table to perform `REPLACE` operations #23939
  - Fix the performance regression when executing the point query #24070
  - Fix the wrong `TableDual` plans caused by incorrectly comparing binaries and bytes #23918
- TiKV
  - Fix the issue that the coprocessor fails to properly handle the signed or unsigned integer types in the `IN` expression #10018
  - Fix the issue of many empty Regions after batch ingesting SST files #10015
  - Fix the potential panic that occurs when the input of `cast_string_as_time` is invalid UTF-8 bytes #9995
  - Fix a bug that TiKV cannot start up after the file dictionary file is damaged #9992
- TiFlash
  - Fix the issue that the storage engine fails to remove the data of some ranges
  - Fix the issue of incorrect results when casting the time type to the integer type
  - Fix a bug that the `receiver` cannot find corresponding tasks within 10 seconds
  - Fix the issue that there might be invalid iterators in `cancelMPPQuery`
  - Fix a bug that the behavior of the `bitwise` operator is different from that of TiDB

  - Fix the alert issue caused by overlapping ranges when using the `prefix key`
  - Fix the issue of incorrect results when casting the string type to the integer type
  - Fix the issue that consecutive and fast writes might make TiFlash out of memory
  - Fix the issue that duplicated column names will make TiFlash raise errors
  - Fix the issue that TiFlash fails to parse MPP plans
  - Fix the potential issue that the exception of null pointer might be raised during the table GC
  - Fix the TiFlash panic issue that occurs when writing data to dropped tables
  - Fix the issue that TiFlash might panic during BR restore

- Tools

  - TiDB Lightning

    * Fix the issue of the inaccurate table count in the progress log during the import #1005

  - Backup & Restore (BR)

    * Fix a bug that the actual backup speed exceeds the `--ratelimit` limit #1026
    * Fix the issue of backup interruption caused by the failure of a few TiKV nodes #1019
    * Fix the issue of the inaccurate table count in the progress log during TiDB Lightning's import #1005

  - TiCDC

    * Fix the concurrency issue in Unified Sorter and filter the unhelpful error messages #1678
    * Fix a bug that the creation of redundant directories might interrupt the replication with MinIO #1672
    * Set the default value of the `explicit_defaults_for_timestamp` session variable to `ON` to make the MySQL 5.7 downstream keep the same behavior with the upstream TiDB #1659
    * Fix the issue that the incorrect handling of `io.EOF` might cause replication interruption #1648
    * Correct the TiKV CDC endpoint CPU metric in the TiCDC dashboard #1645
    * Increase `defaultBufferChanSize` to avoid replication blocking in some cases #1632

16.14.7 What's New in TiDB 5.0

Release date: April 7, 2021

TiDB version: 5.0.0

In v5.0, PingCAP is dedicated to helping enterprises quickly build applications based on TiDB, freeing them from worries about database performance, performance jitter, security, high availability, disaster recovery, troubleshooting SQL performance, and so on.

In v5.0, the key new features or improvements are as follows:

- Introduce Massively Parallel Processing (MPP) architecture through TiFlash nodes, which shares the execution workloads of large join queries among TiFlash nodes. When the MPP mode is enabled, TiDB, based on cost, determines whether to use the MPP framework to perform the calculation. In the MPP mode, the join keys are redistributed through the `Exchange` operation while being calculated, which distributes the calculation pressure to each TiFlash node and speeds up the calculation. According to the benchmark, with the same cluster resource, TiDB 5.0 MPP shows 2 to 3 times of speedup over Greenplum 6.15.0 and Apache Spark 3.1.1, and some queries have 8 times better performance.
- Introduce the clustered index feature to improve database performance. For example, in the TPC-C tpmC test, the performance of TiDB, with clustered index enabled, improves by 39%.
- Enable the async commit feature to reduce the write latency. For example, in the 64-thread Sysbench test, the average latency of updating indexes, with async commit enabled, is reduced by 41.7%, from 12.04 ms to 7.01 ms.
- Reduce jitters. This is achieved by improving the optimizer stability and by limiting system tasks' usages of I/O, network, CPU, and memory resources. For example, in the 8-hour performance test, the standard deviation of TPC-C tpmC does not exceed 2%.
- Enhance system stability by improving scheduling and by keeping execution plans stable as much as possible.
- Introduces Raft Joint Consensus algorithm, which ensures the system availability during the Region membership change.
- Optimize `EXPLAIN` features and invisible index, which helps Database Administrators (DBAs) debug SQL statements more efficiently.
- Guarantee reliability for enterprise data. You can back up data from TiDB to Amazon S3 storage and Google Cloud GCS, or restore data from these cloud storage platforms.
- Improve performance of data import from or data export to Amazon S3 storage or TiDB/MySQL, which helps enterprises quickly build applications on the cloud. For example, in the TPC-C test, the performance of importing 1 TiB data improves by 40%, from 254 GiB/h to 366 GiB/h.

16.14.7.1 Compatibility changes

16.14.7.1.1 System variables

- Add the `tidb_executor_concurrency` system variable to control the concurrency of multiple operators. The previous `tidb_*_concurrency` settings (such as `tidb_projection_concurrency`) still take effect but with a warning when you use them.

- Add the `tidb_skip_ascii_check` system variable to specify whether to skip the ASCII validation check when the ASCII character set is written. This default value is `OFF`.

- Add the tidb_enable_strict_double_type_check system variable to determine whether the syntax like double(N) can be defined in the table schema. This default value is OFF.
- Change the default value of tidb_dml_batch_size from 20000 to 0. This means that batch DML statements are no longer used by default in LOAD/INSERT INTO SELECT ↪ .... Instead, large transactions are used to comply with the strict ACID semantics.

> **Note:**
> The scope of the variable is changed from session to global, and the default value is changed from 20000 to 0. If the application relies on the original default value, you need to use the set global statement to modify the variable to the original value after the upgrade.

- Control temporary tables' syntax compatibility using the tidb_enable_noop_functions ↪ system variable. When this variable value is OFF, the CREATE TEMPORARY TABLE syntax returns an error.
- Add the following system variables to directly control the garbage collection-related parameters:
  - tidb_gc_concurrency
  - tidb_gc_enable
  - tidb_gc_life_time
  - tidb_gc_run_interval
  - tidb_gc_scan_lock_mode
- Change the default value of enable-joint-consensus from false to true, which enables the Joint Consensus feature by default.
- Change the value of tidb_enable_amend_pessimistic_txn from 0 or 1 to ON or OFF.
- Change the default value of tidb_enable_clustered_index from OFF to INT_ONLY with the following new meanings:
  - ON: clustered index is enabled. Adding or deleting non-clustered indexes is supported.
  - OFF: clustered index is disabled. Adding or deleting non-clustered indexes is supported.
  - INT_ONLY: the default value. The behavior is consistent with that before v5.0. You can control whether to enable clustered index for the INT type together with alter-primary-key = false.

Note:

The `INT_ONLY` value of `tidb_enable_clustered_index` in 5.0 GA has the same meaning as the `OFF` value in 5.0 RC. After upgrading from a 5.0 RC cluster with the `OFF` setting to 5.0 GA, it will be displayed as `INT_ONLY`.

16.14.7.1.2 Configuration file parameters

- Add the `index-limit` configuration item for TiDB. Its value defaults to `64` and ranges between `[64,512]`. A MySQL table supports 64 indexes at most. If its value exceeds the default setting and more than 64 indexes are created for a table, when the table schema is re-imported into MySQL, an error will be reported.
- Add the `enable-enum-length-limit` configuration item for TiDB to be compatible and consistent with MySQL's ENUM/SET length (ENUM length < 255). The default value is `true`.
- Replace the `pessimistic-txn.enable` configuration item with the `tidb_txn_mode` environment variable.
- Replace the `performance.max-memory` configuration item with `performance.server-memory-quota`
- Replace the `tikv-client.copr-cache.enable` configuration item with `tikv-client.copr-cache.capacity-mb`. If the item's value is `0.0`, this feature is disabled. If the item's value is greater than `0.0`, this feature is enabled. Its default value is `1000.0`.
- Replace the `rocksdb.auto-tuned` configuration item with `rocksdb.rate-limiter-auto-tuned`.
- Delete the `raftstore.sync-log` configuration item. By default, written data is forcibly spilled to the disk. Before v5.0, you can explicitly disable `raftstore.sync-log`. Since v5.0, the configuration value is forcibly set to `true`.
- Change the default value of the `gc.enable-compaction-filter` configuration item from `false` to `true`.
- Change the default value of the `enable-cross-table-merge` configuration item from `false` to `true`.
- Change the default value of the `rate-limiter-auto-tuned` configuration item from `false` to `true`.

16.14.7.1.3 Others

- Before the upgrade, check the value of the TiDB configuration `feedback-probability`. If the value is not 0, the "panic in the recoverable goroutine" error will occur after the upgrade, but this error does not affect the upgrade.
- Forbid conversion between `VARCHAR` type and `CHAR` type during the column type change to avoid data correctness issues.

16.14.7.2 New features

16.14.7.2.1 SQL

List partitioning (**Experimental**)

User document

With the list partitioning feature, you can effectively query and maintain tables with a large amount of data.

With this feature enabled, partitions and how data is distributed among partitions are defined according to the `PARTITION BY LIST(expr)PARTITION part_name VALUES IN (...)` expression. The partitioned tables' data set supports at most 1024 distinct integer values. You can define the values using the `PARTITION ... VALUES IN (...)` clause.

To enable list partitioning, set the session variable `tidb_enable_list_partition` to `ON`.

List COLUMNS partitioning (**Experimental**)

User document

List COLUMNS partitioning is a variant of list partitioning. You can use multiple columns as partition keys. Besides the integer data type, you can also use the columns in the string, `DATE`, and `DATETIME` data types as partition columns.

To enable List COLUMNS partitioning, set the session variable `tidb_enable_list_partition` ↪ to `ON`.

Invisible indexes

User document, #9246

When you tune performance or select optimal indexes, you can set an index to be `Visible` ↪ or `Invisible` by using SQL statements. This setting can avoid performing resource-consuming operations, such as `DROP INDEX` and `ADD INDEX`.

To modify the visibility of an index, use the `ALTER INDEX` statement. After the modification, the optimizer decides whether to add this index to the index list based on the index visibility.

`EXCEPT` and `INTERSECT` operators

User document, #18031

The `INTERSECT` operator is a set operator, which returns the intersection of the result sets of two or more queries. To some extent, it is an alternative to the `Inner Join` operator.

The `EXCEPT` operator is a set operator, which combines the result sets of two queries and returns elements that are in the first query result but not in the second.

16.14.7.2.2 Transaction

User document, #18005

In the pessimistic transaction mode, if the tables involved in a transaction contain concurrent DDL operations or `SCHEMA VERSION` changes, the system automatically updates the transaction's `SCHEMA VERSION` to the latest to ensure the successful transaction commit, and to avoid that the client receives the `Information schema is changed` error when the transaction is interrupted by DDL operations or `SCHEMA VERSION` changes.

This feature is disabled by default. To enable the feature, modify the value of `tidb_enable_amend_pessimistic_txn` system variable. This feature is introduced in v4.0.7 and has the following issues fixed in v5.0:

- The compatibility issue that occurs when TiDB Binlog executes `Add Column` operations
- The data inconsistency issue that occurs when using the feature together with the unique index
- The data inconsistency issue that occurs when using the feature together with the added index

Currently, this feature still has the following incompatibility issues:

- Transaction's semantics might change when there are concurrent transactions
- Known compatibility issue that occurs when using the feature together with TiDB Binlog
- Incompatibility with `Change Column`

16.14.7.2.3 Character set and collation

- Support the `utf8mb4_unicode_ci` and `utf8_unicode_ci` collations. User document, #17596
- Support the case-insensitive comparison sort for collations

16.14.7.2.4 Security

User document, #18566

To meet security compliance requirements (such as *General Data Protection Regulation*, or GDPR), the system supports desensitizing information (such as ID and credit card number) in the output error messages and logs, which can avoid leaking sensitive information.

TiDB supports desensitizing the output log information. To enable this feature, use the following switches:

- The global variable `tidb_redact_log`. Its default value is `0`, which means that desensitization is disabled. To enable desensitization for tidb-server logs, set the variable value to `1`.
- The configuration item `security.redact-info-log`. Its default value is `false`, which means that desensitization is disabled. To enable desensitization for tikv-server logs, set the variable value to `true`.

- The configuration item `security.redact-info-log`. Its default value is `false`, which means that desensitization is disabled. To enable desensitization for pd-server logs, set the variable value to `true`.
- The configuration item `security.redact_info_log` for tiflash-server and `security.redact-info-log` for tiflash-learner. Their default values are both `false`, which means that desensitization is disabled. To enable desensitization for tiflash-server and tiflash-learner logs, set the values of both variables to `true`.

This feature is introduced in v5.0. To use the feature, enable the system variable and all configuration items above.

16.14.7.3 Performance optimization

16.14.7.3.1 MPP architecture

User document

TiDB introduces the MPP architecture through TiFlash nodes. This architecture allows multiple TiFlash nodes to share the execution workload of large join queries.

When the MPP mode is on, TiDB determines whether to send a query to the MPP engine for computation based on the calculation cost. In the MPP mode, TiDB distributes the computation of table joins to each running TiFlash node by redistributing the join key during data calculation (`Exchange` operation), and thus accelerates the calculation. Furthermore, with the aggregation computing feature that TiFlash has already supported, TiDB can pushdown the computation of a query to the TiFlash MPP cluster. Then the distributed environment can help accelerate the entire execution process and dramatically increase the speed of analytic queries.

In the TPC-H 100 benchmark test, TiFlash MPP delivers significant processing speed over analytic engines of traditional analytic databases and SQL on Hadoop. With this architecture, you can perform large-scale analytic queries directly on the latest transaction data, with a higher performance than traditional offline analytic solutions. According to the benchmark, with the same cluster resource, TiDB 5.0 MPP shows 2 to 3 times of speedup over Greenplum 6.15.0 and Apache Spark 3.1.1, and some queries have 8 times better performance.

Currently, the main features that the MPP mode does not support are as follows (For details, refer to Use TiFlash):

- Table partitioning
- Window Function
- Collation
- Some built-in functions
- Reading data from TiKV
- OOM spill
- Union
- Full Outer Join

16.14.7.3.2 Clustered index

User document, #4841

When you are designing table structures or analyzing database behaviors, it is recommended to use the clustered index feature if you find that some columns with primary keys are often grouped and sorted, queries on these columns often return a certain range of data or a small amount of data with different values, and the corresponding data does not cause read or write hotspot issues.

Clustered indexes, also known as *index-organized tables* in some database management systems, is a storage structure associated with the data of a table. When creating a clustered index, you can specify one or more columns from the table as the keys for the index. TiDB stores these keys in a specific structure, which allows TiDB to quickly and efficiently find the rows associated with the keys, thus improves the performance of querying and writing data.

When the clustered index feature is enabled, the TiDB performance improves significantly (for example in the TPC-C tpmC test, the performance of TiDB, with clustered index enabled, improves by 39%) in the following cases:

- When data is inserted, the clustered index reduces one write of the index data from the network.
- When a query with an equivalent condition only involves the primary key, the clustered index reduces one read of index data from the network.
- When a query with a range condition only involves the primary key, the clustered index reduces multiple reads of index data from the network.
- When a query with an equivalent or range condition involves the primary key prefix, the clustered index reduces multiple reads of index data from the network.

Each table can either use a clustered or non-clustered index to sort and store data. The differences of these two storage structures are as follows:

- When creating a clustered index, you can specify one or more columns in the table as the key value of the index. A clustered index sorts and stores the data of a table according to the key value. Each table can have only one clustered index. If a table has a clustered index, it is called a clustered index table. Otherwise, it is called a non-clustered index table.
- When you create a non-clustered index, the data in the table is stored in an unordered structure. You do not need to explicitly specify the key value of the non-clustered index, because TiDB automatically assigns a unique ROWID to each row of data. During a query, the ROWID is used to locate the corresponding row. Because there are at least two network I/O operations when you query or insert data, the performance is degraded compared with clustered indexes.

When table data is modified, the database system automatically maintains clustered indexes and non-clustered indexes for you.

All primary keys are created as non-clustered indexes by default. You can create a primary key as a clustered index or non-clustered index in either of the following two ways:

- Specify the keyword `CLUSTERED | NONCLUSTERED` in the statement when creating a table, then the system creates the table in the specified way. The syntax is as follows:

```
CREATE TABLE `t` (`a` VARCHAR(255), `b` INT, PRIMARY KEY (`a`, `b`)
    ↪ CLUSTERED);
```

Or

```
CREATE TABLE `t` (`a` VARCHAR(255) PRIMARY KEY CLUSTERED, `b` INT);
```

You can execute the statement `SHOW INDEX FROM tbl-name` to query whether a table has a clustered index.

- Configure the system variable `tidb_enable_clustered_index` to control the clustered index feature. Supported values are `ON`, `OFF`, and `INT_ONLY`.
  - `ON`: Indicates that the clustered index feature is enabled for all types of primary keys. Adding and dropping non-clustered indexes are supported.
  - `OFF`: Indicates that the clustered index feature is disabled for all types of primary keys. Adding and dropping non-clustered indexes are supported.
  - `INT_ONLY`: The default value. If the variable is set to `INT_ONLY` and `alter-primary-key` is set to `false`, the primary keys which consist of single integer columns are created as clustered indexes by default. The behavior is consistent with that of TiDB v5.0 and earlier versions.

If a `CREATE TABLE` statement contains the keyword `CLUSTERED | NONCLUSTERED`, the statement overrides the configuration of the system variable and the configuration item.

You are recommended to use the clustered index feature by specifying the keyword `CLUSTERED | NONCLUSTERED` in statements. In this way, it is more flexible for TiDB to use all data types of clustered and non-clustered indexes in the system at the same time as required.

It is not recommended to use `tidb_enable_clustered_index = INT_ONLY`, because `INT_ONLY` is temporarily used to make this feature compatible and will be deprecated in the future.

Limitations for the clustered index are as follows:

- Mutual conversion between clustered indexes and non-clustered indexes is not supported.
- Dropping clustered indexes is not supported.
- Adding, dropping, and altering clustered indexes using `ALTER TABLE` statements are not supported.

- Reorganizing and re-creating a clustered index is not supported.
- Enabling or disabling indexes is not supported, which means the invisible index feature is not effective for clustered indexes.
- Creating a `UNIQUE KEY` as a clustered index is not supported.
- Using the clustered index feature together with TiDB Binlog is not supported. After TiDB Binlog is enabled, TiDB only supports creating a single integer primary key as a clustered index. TiDB Binlog does not replicate data changes of existing tables with clustered indexes to the downstream.
- Using the clustered index feature together with the attributes `SHARD_ROW_ID_BITS` and `PRE_SPLIT_REGIONS` is not supported.
- If the cluster is upgraded to a later version then rolls back, you need to downgrade newly-added tables by exporting table data before the rollback and importing the data after the rollback. Other tables are not affected.

16.14.7.3.3 Async Commit

User document, #8316

The client of the database will wait for the database system to complete the transaction commit in two phases (2PC) synchronously. The transaction returns the result to the client after the first phase commit is successful, and the system executes the second phase commit operation in the background asynchronously to reduce the transaction commit latency. If the transaction write involves only one Region, the second phase is omitted directly, and the transaction becomes a one-phase commit.

After the Async Commit feature is enabled, with the same hardware and configuration, when Sysbench is set to test the Update index with 64 threads, the average latency decreases by 41.7% from 12.04ms to 7.01ms.

When Async Commit feature is enabled, to reduce one network interaction latency and improve the performance of data writes, database application developers are recommended to consider reducing the consistency of transactions from linear consistency to causal consistency. The SQL statement to enable causal consistency is `START TRANSACTION WITH CAUSAL CONSISTENCY`.

After the causal consistency is enabled, with the same hardware and configuration, when Sysbench is set to test oltp_write_only with 64 threads, the average latency decreased by 5.6% from 11.86ms to 11.19ms.

After the consistency of transactions is reduced from the linear consistency to causal consistency, if there is no interdependence between multiple transactions in the application, the transactions do not have a globally consistent order.

The Async Commit feature is enabled by default for newly created v5.0 clusters.

This feature is disabled by default for clusters upgraded from earlier versions to v5.0. You can enable this feature by executing the `set global tidb_enable_async_commit = ON;` and `set global tidb_enable_1pc = ON;` statements.

The limitation for the Async Commit feature is as follows:

- Direct downgrade is not supported.

16.14.7.3.4 Enable the Coprocessor cache feature by default

User document, #18028

In 5.0 GA, the Coprocessor cache feature is enabled by default. After this feature is enabled, to reduce the latency of reading data, TiDB caches the calculation results of the operators pushed down to tikv-server in tidb-server.

To disable the Coprocessor cache feature, you can modify the `capacity-mb` configuration item of `tikv-client.copr-cache` to `0.0`.

16.14.7.3.5 Improve the execution performance of `delete from table where id <? Limit ?` statement

#18028

The p99 performance of the `delete from table where id <? limit ?` statement is improved by 4 times.

16.14.7.3.6 Optimize load base split strategy to solve the performance problem that data cannot be split in some small table hotspot read scenarios

#18005

16.14.7.4 Improve stability

16.14.7.4.1 Optimize the performance jitter issue caused by imperfect scheduling

#18005

The TiDB scheduling process occupies resources such as I/O, network, CPU, and memory. If TiDB does not control the scheduled tasks, QPS and delay might cause performance jitter due to resource preemption.

After the following optimizations, in the 8-hour performance test, the standard deviation of TPC-C tpmC does not exceed 2%.

Introduce new scheduling calculation formulas to reduce unnecessary scheduling and performance jitter

When the node capacity is always near the waterline set in the system, or when the `store-limit` is set too large, to balance the capacity load, the system frequently schedules Regions to other nodes or even schedules Regions back to their original nodes. Because

scheduling occupies resources, such as I/O, network, CPU, and memory, and causes performance jitter, this type of scheduling is not necessary.

To mitigate this issue, PD introduces a new set of default scheduling calculation formulas. You can switch back to the old formulas by configuring `region-score-formula-version = v1`.

Enable the cross-table Region merge feature by default

User document

Before v5.0, TiDB disables the cross-table Region merge feature by default. Starting from v5.0, this feature is enabled by default to reduce the number of empty Regions and the overhead of network, memory, and CPU. You can disable this feature by modifying the `schedule.enable-cross-table-merge` configuration item.

Enable the system to automatically adjust the data compaction speed by default to balance the contention for I/O resources between background tasks and foreground reads and writes

User document

Before v5.0, to balance the contention for I/O resources between background tasks and foreground reads and writes, the feature that the system automatically adjusts the data compaction speed is disabled by default. Starting from v5.0, TiDB enables this feature by default and optimizes the algorithm so that the latency jitter is significantly reduced.

You can disable this feature by modifying the `rate-limiter-auto-tuned` configuration item.

Enable the GC Compaction Filter feature by default to reduce GC's consumption of CPU and I/O resources

User document, #18009

When TiDB performs garbage collection (GC) and data compaction, partitions occupy CPU and I/O resources. Overlapping data exists during the execution of these two tasks.

To reduce GC's consumption of CPU and I/O resources, the GC Compaction Filter feature combines these two tasks into one and executes them in the same task. This feature is enabled by default. You can disable it by configuring `gc.enable-compaction-filter = false`.

TiFlash limits the compression and data sorting's use of I/O resources (**experimental feature**)

This feature alleviates the contention for I/O resources between background tasks and foreground reads and writes.

This feature is disabled by default. You can enable this feature by modifying the `bg_task_io_rate_limit` configuration item.

Improve the performance of checking scheduling constraints and the performance of fixing the unhealthy Regions in a large cluster

16.14.7.4.2 Ensure that the execution plans are unchanged as much as possible to avoid performance jitter

User document

SQL Binding supports the `INSERT`、`REPLACE`、`UPDATE`、`DELETE` statements

When tuning performance or maintaining the database, if you find that the system performance is unstable due to unstable execution plans, you can select a manually optimized SQL statement according to your judgement or tested by `EXPLAIN ANALYZE`. You can bind the optimized SQL statement to the SQL statement to be executed in the application code to ensure stable performance.

When manually binding SQL statements using the SQL BINDING statement, you need to ensure that the optimized SQL statement has the same syntax as the original SQL statement.

You can view the manually or automatically bound execution plan information by running the `SHOW {GLOBAL | SESSION} BINDINGS` command. The output is the same as that of versions earlier than v5.0.

Automatically capture and bind execution plans

When upgrading TiDB, to avoid performance jitter, you can enable the baseline capturing feature to allow the system to automatically capture and bind the latest execution plan and store it in the system table. After TiDB is upgraded, you can export the bound execution plan by running the `SHOW GLOBAL BINDING` command and decide whether to delete these plans.

This feature is disbled by default. You can enable it by modifying the server or setting the `tidb_capture_plan_baselines` global system variable to `ON`. When this feature is enabled, the system fetches the SQL statements that appear at least twice from the Statement Summary every `bind-info-lease` (the default value is `3s`), and automatically captures and binds these SQL statements.

16.14.7.4.3 Improve stability of TiFlash queries

Add a system variable `tidb_allow_fallback_to_tikv` to fall back queries to TiKV when TiFlash fails. The default value is `OFF`.

16.14.7.4.4 Improve TiCDC stability and alleviate the OOM issue caused by replicating too much incremental data

User document, #1150

In TiCDC v4.0.9 or earlier versions, replicating too much data change might cause OOM. In v5.0, the Unified Sorter feature is enabled by default to mitigate OOM issues caused by the following scenarios:

- The data replication task in TiCDC is paused for a long time, during which a large amount of incremental data is accumulated and needs to be replicated.

- The data replication task is started from an early timestamp, so it becomes necessary to replicate a large amount of incremental data.

Unified Sorter is integrated with the `memory/file` sort-engine options of earlier versions. You do not need to manually configure the change.

Limitations:

- You need to provide sufficient disk capacity according to the amount of your incremental data. It is recommended to use SSDs with free capacity greater than 128 GB.

16.14.7.5 High availability and disaster recovery

16.14.7.5.1 Improve system availability during Region membership change

User document, #18079, #7587, #2860

In the process of Region membership changes, "adding a member" and "deleting a member" are two operations performed in two steps. If a failure occurs when the membership change finishes, the Regions will become unavailable and an error of foreground application is returned.

The introduced Raft Joint Consensus algorithm can improve the system availability during Region membership change. "adding a member" and "deleting a member" operations during the membership change are combined into one operation and sent to all members. During the change process, Regions are in an intermediate state. If any modified member fails, the system is still available.

This feature is enabled by default. You can disable it by running the `pd-ctl config set enable-joint-consensus` command to set the `enable-joint-consensus` value to `false`.

16.14.7.5.2 Optimize the memory management module to reduce system OOM risks

Track the memory usage of aggregate functions. This feature is enabled by default. When SQL statements with aggregate functions are executed, if the total memory usage of the current query exceeds the threshold set by `mem-quota-query`, the system automatically performs operations defined by `oom-action`.

16.14.7.5.3 Improve the system availability during network partition

16.14.7.6 Data migration

16.14.7.6.1 Migrate data from S3/Aurora to TiDB

TiDB data migration tools support using Amazon S3 (and other S3-compatible storage services) as the intermediate for data migration and initializing Aurora snapshot data directly into TiDB, providing more options for migrating data from Amazon S3/Aurora to TiDB.

To use this feature, refer to the following documents:

- Export data to Amazon S3 cloud storage, #8
- Migrate from Amazon Aurora MySQL Using TiDB Lightning, #266

16.14.7.6.2 Optimize the data import performance of TiDB Cloud

TiDB Lightning optimizes its data import performance specifically for AWS T1.standard configurations (or equivalent) of TiDB Cloud. Test results show that TiDB Lightning improves its speed of importing 1TB of TPC-C data into TiDB by 40%, from 254 GiB/h to 366 GiB/h.

16.14.7.7 Data sharing and subscription

16.14.7.7.1 Integrate TiDB to Kafka Connect (Confluent Platform) using TiCDC (experimental feature)

User document, #660

To support the business requirements of streaming TiDB data to other systems, this feature enables you to stream TiDB data to the systems such as Kafka, Hadoop, and Oracle.

The Kafka connectors protocol provided by the Confluent platform is widely used in the community, and it supports transferring data to either relational or non-relational databases in different protocols. By integrating TiCDC to Kafka Connect of the Confluent platform, TiDB extends the ability to stream TiDB data to other heterogeneous databases or systems.

16.14.7.8 Diagnostics

User document

During the troubleshooting of SQL performance issues, detailed diagnostic information is needed to determine the causes of performance issues. Before TiDB 5.0, the information collected by the `EXPLAIN` statements was not detailed enough. The root causes of the issues can only be determined based on log information, monitoring information, or even on guess, which might be inefficient.

In TiDB v5.0, the following improvements are made to help you troubleshoot performance issues more efficiently:

- Support using the `EXPLAIN ANALYZE` statement to analyze all DML statements to show the actual performance plans and the execution information of each operator. #18056

- Support using the `EXPLAIN FOR CONNECTION` statement to check the real-time status of all the SQL statements being executed. For example, you can use the statement to check the execution duration of each operator and the number of processed rows. #18233
- Provide more details about the operator execution in the output of the `EXPLAIN ANALYZE` statement, including the number of RPC requests sent by operators, the duration of resolving lock conflicts, network latency, the scanned volume of deleted data in RocksDB, and the hit rate of RocksDB caches. #18663
- Support automatically recording the detailed execution information of SQL statements in the slow log. The execution information in the slow log is consistent with the output information of the `EXPLAIN ANALYZE` statement, which includes the time consumed by each operator, the number of processed rows, and the number of sent RPC requests. #15009

16.14.7.9 Deployment and maintenance

16.14.7.9.1 Optimize the logic of cluster deployment operations, to help DBAs deploy a set of standard TiDB production cluster faster

User Document

In previous TiDB versions, DBAs using TiUP to deploy TiDB clusters find that the environment initialization is complicated, the checksum configuration is excessive, and the cluster topology file is difficult to edit. All of these issues lead to low deployment efficiency for DBAs. In TiDB v5.0, the TiDB deployment efficiency using TiUP is improved for DBAs through the following items:

- TiUP Cluster supports the `check topo.yaml` command to perform a more comprehensive one-click environment check and provide repair recommendations.
- TiUP Cluster supports the `check topo.yaml --apply` command to automatically repair environmental problems found during the environment check.
- TiUP Cluster supports the `template` command to get the cluster topology template file for DBAs to edit and support modifying the global node parameters.
- TiUP supports editing the `remote_config` parameter using the `edit-config` command to configure remote Prometheus.
- TiUP supports editing the `external_alertmanagers` parameter to configure different AlertManagers using the `edit-config` command.
- When editing the topology file using the `edit-config` subcommand in tiup-cluster, you can modify the data types of the configuration item values.

16.14.7.9.2 Improve upgrade stability

Before TiUP v1.4.0, during the upgrade of a TiDB cluster using tiup-cluster, the SQL responses of the cluster jitter for a long period of time, and during PD online rolling upgrades, the QPS of the cluster jitter between 10s to 30s.

TiUP v1.4.0 adjusts the logic and makes the following optimizations:

- During the upgrade of PD nodes, TiUP automatically checks the status of the restarted PD node, and then rolls to upgrade the next PD node after confirming that the status is ready.
- TiUP identifies the PD role automatically, first upgrades the PD nodes of the follower role, and finally upgrades the PD Leader node.

16.14.7.9.3 Optimize the upgrade time

Before TiUP v1.4.0, when DBAs upgrade TiDB clusters using tiup-cluster, for clusters with a large number of nodes, the total upgrade time is long and cannot meet the upgrade time window requirement for certain users.

Starting from v1.4.0, TiUP optimizes the following items:

- Supports fast offline upgrades using the `tiup cluster upgrade --offline` subcommand.
- Speeds up the Region Leader relocation for users using rolling upgrades during upgrades by default, so that reduces the time of rolling TiKV upgrades.
- Checks the status of the Region monitor using the `check` subcommand before running a rolling upgrade. Ensure that the cluster is in a normal state before the upgrade, thus reducing the probability of upgrade failures.

16.14.7.9.4 Support the breakpoint feature

Before TiUP v1.4.0, when DBAs upgrade TiDB clusters using tiup-cluster, if the execution of a command is interrupted, all the upgrade operations have to be performed again from the beginning.

TiUP v1.4.0 supports retrying failed operations from breakpoints using the tiup-cluster `replay` subcommand, to avoid re-executing all operations after an upgrade interruption.

16.14.7.9.5 Enhance the functionalities of maintenance and operations

TiUP v1.4.0 further enhances the functionalities for operating and maintaining TiDB clusters.

- Supports the upgrade or patch operation on the downtime TiDB and DM clusters to adapt to more usage scenarios.
- Adds the `--version` parameter to the `display` subcommand of tiup-cluster to get the cluster version.
- When only Prometheus is included in the node being scaled out, the operation of updating the monitoring configuration is not performed, to avoid scale-out failure due to the absence of the Prometheus node.
- Adds user input to the error message when the results of the input TiUP commands are incorrect, so that you can locate the cause of the problem more quickly.

16.14.7.10 Telemetry

TiDB adds cluster usage metrics in telemetry, such as the number of data tables, the number of queries, and whether new features are enabled.

To learn more about details and how to disable this behavior, refer to telemetry.

16.14.8 TiDB 5.0 RC Release Notes

Release date: January 12, 2021

TiDB version: 5.0.0-rc

TiDB v5.0.0-rc is the predecessor version of TiDB v5.0. In v5.0, PingCAP will be dedicated to helping enterprises quickly build applications based on TiDB, freeing them from worries about database performance, performance jitter, security, high availability, disaster recovery, troubleshooting SQL performance, and so on.

In v5.0, the key new features or improvements are as follows:

- Clustered index. When this feature is enabled, database performance is improved. For example, in the TPC-C tpmC test, TiDB's performance, with clustered index enabled, improves by 39%.
- Async commit. When this feature is enabled, the write latency is reduced. For example, in the Sysbench olpt-insert test, the write latency of TiDB, with async commit enabled, is reduced by 37.3%.
- Reduced jitters. This is achieved by improving the optimizer stability and by limiting system tasks' usages of I/O, network, CPU, and memory resources. For example, in the 72-hour performance test, the standard deviation of Sysbench TPS jitter is reduced from 11.09% to 3.36%.
- Raft Joint Consensus algorithm, which ensures the system availability during the Region membership change.
- Optimized `EXPLAIN` features and invisible index, which helps Database Administrators (DBAs) debug SQL statements more efficiently.
- Guaranteed reliability for enterprise data. You can back up data from TiDB to AWS S3 storage and Google Cloud GCS, or restore data from these cloud storage platforms.
- Improved performance of data import from or data export to AWS S3 storage or TiDB/MySQL, which helps enterprises quickly build applications on the cloud. For example, in the TPC-C test, the performance of importing 1 TiB data improves by 40%, from 254 GiB/h to 366 GiB/h.

16.14.8.1 SQL

16.14.8.1.1 Support clustered index (experimental)

When the clustered index feature is enabled, TiDB performance improves significantly (for example in the TPC-C tpmC test, TiDB's performance, with clustered index enabled, improves by 39%) in the following cases:

- When data is inserted, the clustered index reduces one write of the index data from the network.
- When a query with an equivalent condition only involves the primary key, the clustered index reduces one read of index data from the network.
- When a query with a range condition only involves the primary key, the clustered index reduces multiple reads of index data from the network.
- When a query with an equivalent or range condition involves the primary key prefix, the clustered index reduces multiple reads of index data from the network.

Clustered index defines the physical storage order of data in a table. The data in the table is sorted only according to the definition of the clustered index. Each table has only one clustered index.

Users can enable the clustered index feature by modifying the `tidb_enable_clustered_index` ↪ variable. When enabled, the feature takes effect only on newly created tables and applies to the primary key that has multiple columns or is non-integer types in a single column. If the primary key is an integer type in a single column, or if the table has no primary key, the data is sorted in the same way as before, without being affected by the clustered index.

For example, to check whether a table (`tbl_name`) has a clustered index, execute `select tidb_pk_type from information_schema.tables where table_name = '{` ↪ `tbl_name}'`.

- User document
- Related issue: #4841

16.14.8.1.2 Support invisible indexes

When users tune performance or select optimal indexes, they can set an index to be `Visible` or `Invisible` by using SQL statements. This setting can avoid performing resource-consuming operations, such as `DROP INDEX` and `ADD INDEX`.

To modify the visibility of an index, use the `ALTER INDEX` statement. After the modification, the optimizer decides whether to add this index to the index list based on the index visibility.

- User document
- Related issue: #9246

16.14.8.1.3 Support `EXCEPT` and `INTERSECT` operators

The `INTERSECT` operator is a set operator, which returns the intersection of the result sets of two or more queries. To some extent, it is an alternative to the `InnerJoin` operator.

The `EXCEPT` operator is a set operator, which combines the result sets of two queries and returns elements that are in the first query result but not in the second.

- User document
- Related issue: #18031

16.14.8.2 Transaction

16.14.8.2.1 Increase the success rate of executing pessimistic transactions

In the pessimistic transaction mode, if the tables involved in a transaction contain concurrent DDL operations or `SCHEMA VERSION` changes, the system automatically updates the transaction's `SCHEMA VERSION` to the latest to avoid the transaction being interrupted by DDL operations and to ensure the successful transaction commit. If the transaction is interrupted, the client receives the `Information schema is changed` error message.

- User document
- Related issue: #18005

16.14.8.3 Character set and collation

Support case-insensitive comparison sort for character sets.

- User document
- Related issue: #17596

16.14.8.4 Security

16.14.8.4.1 Support desensitizing error messages and log files

TiDB now supports desensitizing error messages and log files to avoid leaking sensitive information such as ID information and credit card number.

Users can enable the desensitization feature for different components:

- For the TiDB side, set the `tidb_redact_log=1` variable using SQL statements in tidb-server.
- For the TiKV side, set the `security.redact-info-log = true` configuration in tikv-server.
- For the PD side, set the `security.redact-info-log = true` configuration in pd-server. #2852 #3011
- For the TiFlash side, set the `security.redact_info_log = true` configuration in tiflash-server and set `security.redact-info-log = true` in tiflash-learner.

User document

Related issue: #18566

16.14.8.5 Performance improvements

16.14.8.5.1 Support async commit (experimental)

Enabling the async commit feature can significantly reduce the latency of transactions. For example, with this feature enabled, the latency of transactions in the Sysbench oltp-insert test is 37.3% lower than that when this feature is disabled.

Previously without the async commit feature, the statements being written were only returned to the client after the two-phase transaction commit finished. Now the async commit feature supports returning the result to the client after the first phase of the two-phase commit finishes. The second phase is then performed asynchronously in the background, thus reducing the latency of transaction commit.

However, when async commit is enabled, the external consistency of transactions can be guaranteed **only** when `tidb_guarantee_external_consistency = ON` is set. With async commit enabled, the performance might drop.

Users can enable this feature by setting the global variable `tidb_enable_async_commit = ON`.

- User document
- Related issue: #8316

16.14.8.5.2 Improve the optimizer's stability in index selection (experimental)

The optimizer's ability to always select a relatively suitable index greatly determines whether the latency of queries is stable. We have improved and refactored the statistics module to ensure that, for the same SQL statements, the optimizer does not select a different index from multiple candidate indexes each time due to missing or inaccurate statistics. The main improvements to help the optimizer select a relatively suitable index are as follows:

- Add more information to the statistics module, such as the multi-column NDV, the multi-column order dependency, and the multi-column function dependency.
- Refactor the statistics module.
  - Delete `TopN` values from `CMSKetch`.
  - Refactor the search logic of `TopN`.
  - Delete the `TopN` information from the histogram and create an index of the histogram for easy maintenance of Bucket NDV.

Related issue: #18065

16.14.8.5.3 Optimize performance jitter caused by imperfect scheduling or imperfect I/O flow control

The TiDB scheduling process occupies resources such as I/O, network, CPU, and memory. If TiDB does not control the scheduled tasks, QPS and delay might cause performance jitter due to resource preemption. After the following optimizations, in the 72-hour test, the standard deviation of Sysbench TPS jitter is reduced from 11.09% to 3.36%.

- Reduce the redundant scheduling issues caused by fluctuations of node capacity (always near the waterline) and caused by PD's `store-limit` configuration value set too large. This is achieved by introducing a new set of scheduling calculation formulas enabled via the `region-score-formula-version = v2` configuration item. #3269
- Enable the cross-Region merge feature by modifying `enable-cross-table-merge = true` to reduce the number of empty Regions. #3129
- Data compaction in the TiKV background occupies a lot of I/O resources. The system automatically adjusts the compaction rate to balance the contention for I/O resources between background tasks and foreground reads and writes. After enabling this feature via the `rate-limiter-auto-tuned` configuration item, the delay jitter is greatly reduced. #18011
- When TiKV performs garbage collection (GC) and data compaction, partitions occupy CPU and I/O resources. Overlapping data exists during the execution of these two tasks. To reduce I/O usage, the GC Compaction Filter feature combines these two tasks into one and executes them in the same task. This feature is still experimental and you can enable it via `gc.enable-compaction-filter = true`. #18009
- When TiFlash compresses or sorts data, it occupies a lot of I/O resources. The system alleviates contention for resources by limiting the compression and data sorting's use of I/O resources. This feature is still experimental and you can enable it via `bg_task_io_rate_limit`.

Related issue: #18005

16.14.8.5.4 Improve the stability of TiFlash in Real-time BI / Data Warehousing scenarios

- Limit the memory usage of DeltaIndex to avoid system out of memory (OOM) caused by excessive memory usage in the scenarios of huge data volume.
- Limit the I/O write traffic used by the background data sorting task to reduce the impact on the foreground tasks.
- Add new thread pools to queue coprocessor tasks, which avoids system OOM caused by excessive memory usage when processing coprocessors in high concurrency.

16.14.8.5.5 Other performance optimizations

- Improve the execution performance of `delete from table where id <?` statement. Its P99 performance improves by four times. #18028

- TiFlash supports concurrently reading and writing data in multiple local disks to improve performance.

16.14.8.6 High availability and disaster recovery

16.14.8.6.1 Improve system availability during Region membership change (experimental)

In the process of Region membership changes, "adding a member" and "deleting a member" are two operations performed in two steps. If a failure occurs when the membership change finishes, the Regions will become unavailable and an error of foreground application is returned. The introduced Raft Joint Consensus algorithm can improve the system availability during Region membership change. "adding a member" and "deleting a member" operations during the membership change are combined into one operation and sent to all members. During the change process, Regions are in an intermediate state. If any modified member fails, the system is still available. Users can enable this feature by modifying the membership variable by executing `pd-ctl config set enable-joint-consensus true`. #7587 #2860

- User document
- Related issue: #18079

16.14.8.6.2 Optimize the memory management module to reduce system OOM risks

- Reduce the memory consumption of caching statistics.
- Reduce the memory consumption of exporting data using the Dumpling tool.
- Reduced the memory consumption by storing the encrypted intermediate results of data to the disk.

16.14.8.7 Backup and restore

- The Backup & Restore tool (BR) supports backing up data to AWS S3 and Google Cloud GCS. (User document)
- The Backup & Restore tool (BR) supports restoring data from AWS S3 and Google Cloud GCS to TiDB. (User document)
- Related issue: #89

16.14.8.8 Data import and export

- TiDB Lightning supports importing Aurora snapshot data from AWS S3 storage to TiDB. (Related issue: #266)

- In the TPC-C test of importing 1 TiB of data into DBaaS T1.standard, the performance improves by 40%, from 254 GiB/h to 366 GiB/h.
- Dumpling supports exporting data from TiDB/MySQL to AWS S3 storage (experimental) (Related issue: #8, User document)

16.14.8.9 Diagnostics

16.14.8.9.1 Optimized `EXPLAIN` features with more collected information help users troubleshoot performance issues

When users troubleshoot SQL performance issues, they need detailed diagnostic information to determine the causes of performance issues. In previous TiDB versions, the information collected by the `EXPLAIN` statements was not detailed enough. DBAs performed troubleshooting only based on log information, monitoring information, or even on guess, which might be inefficient. The following improvements are made in TiDB v5.0 to help users troubleshoot performance issues more efficiently:

- `EXPLAIN ANALYZE` supports analyzing all DML statements and shows the actual performance plans and the execution information of each operator. #18056
- Users can use `EXPLAIN FOR CONNECTION` to analyze the status information of the SQL statements that are being executed. This information includes the execution duration of each operator and the number of processed rows. #18233
- More information is available in the output of `EXPLAIN ANALYZE`, including the number of RPC requests sent by operators, the duration of resolving lock conflicts, network latency, the scanned volume of deleted data in RocksDB, and the hit rate of RocksDB caches. #18663
- The detailed execution information of SQL statements is recorded in the slow log, which is consistent with the output information of `EXPLAIN ANALYZE`. This information includes the time consumed by each operator, the number of processed rows, and the number of sent RPC requests. #15009

User document

16.14.8.10 Deployment and maintenance

- Previously, when the configuration information of TiDB Ansible was imported to TiUP, TiUP put the user configuration in the `ansible-imported-configs` directory. When users later needed to edit the configuration using `tiup cluster edit-config`, the imported configuration was not displayed in the editor interface, which could be confusing for users. In TiDB v5.0, when TiDB Ansible configuration is imported, TiUP puts the configuration information both in `ansible-imported-configs` and in the editor interface. With this improvement, users can see the imported configuration when they are editing the cluster configuration.

- Enhanced `mirror` command that supports merging multiple mirrors into one, publishing components in the local mirror, and adding component owners in the local mirror. #814
  - For a large enterprise, especially for the financial industry, any change in the production environment is given careful consideration. It can be troublesome if each version requires users to use a CD for installation. In TiDB v5.0, the `merge` command of TiUP supports merging multiple installation packages into one, which makes the installation easier.
  - In v4.0, users had to start tiup-server to publish the self-built mirror, which was not convenient enough. In v5.0, users can publish the self-built mirror simply by using `tiup mirror set` to set the current mirror to the local mirror.

16.15 v4.0

16.15.1 TiDB 4.0.16 Release Notes

Release date: December 17, 2021

TiDB version: 4.0.16

16.15.1.1 Compatibility changes

- TiKV
  - Before v4.0.16, when TiDB converts an illegal UTF-8 string to a Real type, an error is reported directly. Starting from v4.0.16, TiDB processes the conversion according to the legal UTF-8 prefix in the string #11466
- Tools
  - TiCDC
    * Change the default value of Kafka Sink `max-message-bytes` to 1 MB to prevent TiCDC from sending too large messages to Kafka clusters #2962
    * Change the default value of Kafka Sink `partition-num` to 3 so that TiCDC distributes messages across Kafka partitions more evenly #3337

16.15.1.2 Improvements

- TiDB
  - Upgrade the Grafana version from 7.5.7 to 7.5.11
- TiKV

  - Reduce disk space consumption by adopting the zstd algorithm to compress SST files when restoring data using Backup & Restore or importing data using Local-backend of TiDB Lightning #11469

- Tools

  - Backup & Restore (BR)

    * Improve the robustness of restoring #27421

  - TiCDC

    * Add a tick frequency limit to EtcdWorker to prevent frequent etcd writes from affecting PD services #3112
    * Optimize rate limiting control on TiKV reloads to reduce gPRC congestion during changefeed initialization #3110

16.15.1.3 Bug fixes

- TiDB

  - Fix the query panic caused by overflow in the statistics module when converting a range to points for cost estimation #23625
  - Fix wrong results of the control functions (such as `IF` and `CASE WHEN`) when using the `ENUM` type data as parameters of such functions #23114
  - Fix the issue that the `GREATEST` function returns inconsistent results due to different values of `tidb_enable_vectorized_expression` (`on` or `off`) #29434
  - Fix the panic when applying index join on prefix indexes in some cases #24547
  - Fix the issue that planner might cache invalid plans for `join` in some cases #28087
  - Fix a bug that TiDB cannot insert `null` into a non-null column when `sql_mode` is empty #11648
  - Fix the wrong result type of the `GREATEST` and `LEAST` functions #29019
  - Fix the `privilege check fail` error when performing the `grant` and `revoke` operations to grant and revoke global level privileges #29675
  - Fix the panic when using the `CASE WHEN` function on the `ENUM` data type #29357
  - Fix wrong results of the `microsecond` function in vectorized expressions #29244
  - Fix wrong results of the `hour` function in vectorized expression #28643
  - Fix the issue that optimistic transaction conflicts might cause transactions to block each other #11148
  - Fix the issue of incomplete log information from the `auto analyze` result #29188
  - Fix the issue that using an invalid default date does not report an error when the `SQL_MODE` is 'NO_ZERO_IN_DATE' #26766
  - Fix the issue that the Coprocessor Cache panel in Grafana does not display metrics. Now, Grafana displays the number of `hits/miss/evict` #26338
  - Fix the issue that concurrently truncating the same partition causes DDL statements to stuck #26229

  - Fix the issue that the length information is wrong when converting `Decimal` to `String` #29417
  - Fix the issue of an extra column in the query result when `NATURAL JOIN` is used to join multiple tables #29481
  - Fix the issue that `TopN` is wrongly pushed down to `indexPlan` when `IndexScan` uses a prefix index #29711
  - Fix the issue that retrying transactions with the auto-increment columns of `DOUBLE` type causes data corruption #29892

- TiKV

  - Fix a panic issue that occurs when Region merge, ConfChange, and Snapshot happen at the same time in extreme conditions #11475
  - Fix the issue of negative sign when the decimal divide result is zero #29586
  - Fix the issue that the average latency of the by-instance gRPC requests is inaccurate in TiKV metrics #11299
  - Fix the issue of TiCDC panic that occurs when the downstream database is missing #11123
  - Fix the issue that the Raft connection is broken when the channel is full #11047
  - Fix the issue that TiDB cannot correctly identify whether the `Int64` types in `Max`/`Min` functions are a signed integer or not, which causes the wrong calculation result of `Max`/`Min` #10158
  - Fix the issue that CDC adds scan retries frequently due to the Congest error #11082

- PD

  - Fix a panic issue that occurs after the TiKV node is removed #4344
  - Fix slow leader election caused by stucked region syncer #3936
  - Support that the evict leader scheduler can schedule regions with unhealthy peers #4093

- TiFlash

  - Fix the issue that TiFlash fails to start up on some platforms due to the absence of library `nsl`

- Tools

  - TiDB Binlog

    * Fix the bug that Drainer exits when transporting a transaction greater than 1 GB #28659

  - TiCDC

    * Fix the negative value error in the changefeed checkpoint lag #3010
    * Fix OOM in container environments #1798

    * Fix the TiCDC replication interruption issue when multiple TiKVs crash or during a forced restart #3288
    * Fix the memory leak issue after processing DDLs #3174
    * Fix the issue that changefeed does not fail fast enough when the ErrGCTTLExceeded error occurs #3111
    * Fix the issue that TiCDC replication task might terminate when the upstream TiDB instance unexpectedly exits #3061
    * Fix the issue that TiCDC process might panic when TiKV sends duplicate requests to the same Region #2386
    * Fix the issue that the volume of Kafka messages generated by TiCDC is not constrained by `max-message-size` #2962
    * Fix the issue that `tikv_cdc_min_resolved_ts_no_change_for_1m` keeps alerting when there is no changefeed #11017
    * Fix the issue that TiCDC sync task might pause when an error occurs during writing a Kafka message #2978
    * Fix the issue that some partitioned tables without valid indexes might be ignored when `force-replicate` is enabled #2834
    * Fix the memory leak issue when creating a new changefeed #2389
    * Fix the issue that might cause inconsistent data due to Sink components advancing resolved ts early #3503
    * Fix the issue that scanning stock data might fail due to TiKV performing GC when scanning stock data takes too long #2470
    * Fix the issue that the changefeed update command does not recognize global command line parameters #2803

16.15.2 TiDB 4.0.15 Release Notes

Release Date: September 27, 2021

TiDB version: 4.0.15

16.15.2.1 Compatibility changes

- TiDB
    - Fix the issue that executing `SHOW VARIABLES` in a new session is slow. This fix reverts some changes made in #21045 and might cause compatibility issues. #24326
    - The following bug fixes change execution results, which might cause upgrade incompatibilities:
        * Fix the issue that `greatest(datetime)union null` returns empty string #26532
        * Fix the issue that the `having` clause might not work correctly #26496
        * Fix the wrong execution results that occur when the collations around the `between` expression are different #27146

    * Fix the result wrong that occurs when the argument of the `extract` function is a negative duration #27236
    * Fix the wrong execution results that occur when the column in the `group_concat` function has a non-bin collation #27429
    * Fix the issue that column information is missed when converting the `Apply` operator to `Join` #27233
    * Fix the issue of unexpected behavior when casting the invalid string to `DATE` #26762
    * Fix a bug that the `count distinct` result on multiple columns is wrong when the new collation is enabled #27091

16.15.2.2 Feature enhancement

- TiKV
    - Support changing TiCDC configurations dynamically #10645

16.15.2.3 Improvements

- TiDB
    - Trigger auto-analyze based on the histogram row count #24237
- TiKV
    - Handle read ready and write ready separately to reduce read latency #10475
    - The slow log of TiKV coprocessor only considers the time spent on processing requests. #10841
    - Drop log instead of blocking threads when the slogger thread is overloaded and the queue is filled up #10841
    - Reduce the size of Resolved TS messages to save network bandwidth #2448
- PD
    - Improve the performance of synchronizing Region information between PDs #3932
- Tools
    - Backup & Restore (BR)
        * Split and scatter Regions concurrently to improve restore speed #1363
        * Retry BR tasks when encountering the PD request error or the TiKV I/O timeout error #27787
        * Reduce empty Regions when restoring many small tables to avoid affecting cluster operations after the restore #1374

    * Perform the `rebase auto id` operation while creating tables, which saves the separate `rebase auto id` DDL operation and speeds up restore #1424

  - Dumpling

    * Filter the skipped databases before getting the table information to improve the filtering efficiency of `SHOW TABLE STATUS` #337
    * Use `SHOW FULL TABLES` to get table information for tables to be exported, because `SHOW TABLE STATUS` cannot work properly in some MySQL versions #322
    * Support backing up MySQL-compatible databases that do not support the `START TRANSACTION ... WITH CONSISTENT SNAPSHOT` or the `SHOW CREATE TABLE` syntax #309
    * Refine the Dumpling warning log to avoid the misleading information that a dump fails #340

  - TiDB Lightning

    * Support importing data into tables that have expression index or the index that depends on virtual generated columns #1404

  - TiCDC

    * Always pulls old values from TiKV internally to improve usability #2397
    * Reduce the goroutine usage when a table's Regions are all transferred away from a TiKV node #2284
    * Optimize workerpool for fewer goroutines when concurrency is high #2211
    * Execute DDL statements asynchronously to avoid affecting other changefeeds #2295
    * Add a global gRPC connection pool and share gRPC connections among KV clients #2531
    * Fail fast for unrecoverable DML errors #1724
    * Optimize memory management when the Unified Sorter is using memory to sort data #2553
    * Add Prometheus metrics for DDL executions #2595 #2669
    * Prohibit operating TiCDC clusters across major or minor versions #2601
    * Remove `file sorter` #2325
    * Clean up changefeed metrics when a changefeed is removed, and clean up processor metrics when a processor exits #2156
    * Optimize the lock-resolving algorithm after a Region is initialized #2188

16.15.2.4 Bug fixes

- TiDB

  - Fix a bug that collation is incorrectly set for binary literals when building ranges #23672

  - Fix the "index out of range" error that occurs when a query includes both `GROUP BY` and `UNION` #26553
  - Fix the issue that TiDB might fail to send requests if TiKV has tombstone stores #23676 #24648
  - Remove the undocumented `/debug/sub-optimal-plan` HTTP API #27264
  - Fix the issue of wrong character set and collation for the `case when` expression #26662

- TiKV

  - Fix the issue that BR reports the "file already exists" error when TDE is enabled during data restore #1179
  - Fix the potential disk full issue caused by corrupted snapshot files #10813
  - Fix the issue that TiKV deletes stale Regions too frequently #10680
  - Fix the issue that TiKV frequently reconnects the PD client #9690
  - Check stale file information from the encryption file dictionary #9115

- PD

  - Fix the issue that PD does not fix the down peers in time #4077
  - Fix a bug that PD might panic when scaling out TiKV #3868

- TiFlash

  - Fix the potential issue of data inconsistency that occurs when TiFlash is deployed on multiple disks
  - Fix a bug of incorrect results that occurs when queries contain filters like `CONSTANT <= COLUMN`, `CONSTANT < COLUMN`, `CONSTANT >= COLUMN`, or `CONSTANT > COLUMN`
  - Fix the issue that the store size in metrics is inaccurate under heavy writing
  - Fix a potential bug that TiFlash cannot restore data when deployed on multiple disks
  - Fix the potential issue that TiFlash cannot garbage-collect the delta data after running for a long time

- Tools

  - Backup & Restore (BR)

    * Fix a bug that the average speed is inaccurately calculated for backup and restore #1405

  - TiCDC

    * Fix the `ErrSchemaStorageTableMiss` error that occurs when the DDL Job duplication is encountered in the integrated test #2422
    * Fix a bug that a changefeed cannot be removed if the `ErrGCTTLExceeded` error occurs #2391

* Fix the issue that outdated capture might appear in the output of the `capture list` command #2388
* Fix the deadlock issue in the TiCDC processor #2017
* Fix a data inconsistency issue that occurs because multiple processors might write data to the same table when this table is being re-scheduled #2230
* Fix a bug that the `EtcdWorker` snapshot isolation is violated in metadata management #2557
* Fix the issue that the changefeed cannot be stopped due to the DDL sink error #2552
* Fix the issue of TiCDC Open Protocol: TiCDC outputs an empty value when there is no change in a transaction #2612
* Fix a bug that causes TiCDC to panic on the unsigned `TINYINT` type #2648
* Decrease the gRPC window size to avoid the OOM that occurs when TiCDC captures too many Regions #2202
* Fix the OOM issue that occurs when TiCDC captures too many Regions #2673
* Fix the issue of process panic that occurs when encoding the data types such as `mysql.TypeString`, `mysql.TypeVarString`, `mysql.TypeVarchar` into JSON #2758
* Fix the a memory leak issue that might occur when creating a new changefeed #2389
* Fix a bug that DDL handling fails when a changefeed starts at the finish TS of a schema change #2603
* Fix the issue of potential DDL loss when the owner crashes when executing DDL statements #1260
* Fix the issue of insecure concurrent access to the map in `SinkManager` #2298

16.15.3 TiDB 4.0.14 Release Notes

Release date: July 27, 2021

TiDB version: 4.0.14

16.15.3.1 Compatibility changes

- TiDB
  - Change the default value of `tidb_multi_statement_mode` from `WARN` to `OFF` in v4.0. It is recommended to use the multi-statement feature of your client library instead. See the documentation on `tidb_multi_statement_mode` for details. #25749
  - Upgrade Grafana dashboard from v6.1.16 to v7.5.7 to solve two security vulnerabilities. See the Grafana blog post for details.
  - Change the default value of the `tidb_stmt_summary_max_stmt_count` variable from 200 to 3000 #25872

- TiKV
  - Change the default value of `merge-check-tick-interval` from `10` to `2` to speed up the Region merge process #9676

16.15.3.2 Feature enhancements

- TiKV
  - Add a metric `pending` to monitor the number of pending PD heartbeats, which helps locate the issue of slow PD threads #10008
  - Support using the virtual-host addressing mode to make BR support the S3-compatible storage #10242
- TiDB Dashboard
  - Support OIDC SSO. By setting the OIDC-compatible SSO services (such as Okta and Auth0), users can log into TiDB Dashboard without entering the SQL password. #960
  - Add the **Debug API** UI, which is an alternative method to the command line to call several common TiDB and PD internal APIs for advanced debugging #927

16.15.3.3 Improvements

- TiDB
  - Change the `LOCK` record into the `PUT` record for the index keys using `point get` or `batch point get` for `UPDATE` reads #26223
  - Support the MySQL system variable `init_connect` and its associated features #26031
  - Support the stable result mode to make the query results more stable #26003
  - Support pushing down the built-in function `json_unquote()` to TiKV #25721
  - Make the SQL Plan Management (SPM) not affected by the character set #23295
- TiKV
  - Shutdown the status server first to make sure that the client can correctly check the shutdown status #10504
  - Always respond to stale peers to make sure that these peers are cleared quicker #10400
  - Limit the TiCDC sink's memory consumption #10147
  - When a Region is too large, use the even split to speed up the split process #10275
- PD

  - Reduce the conflicts among multiple schedulers that run at the same time #3858 #3854

- TiDB Dashboard

  - Update TiDB Dashboard to v2021.07.17.1 #3882
  - Support sharing the current session as a read-only session to avoid further modification to it #960

- Tools

  - Backup & Restore (BR)

    * Speed up restore by merging small backup files #655

  - Dumpling

    * Always split tables using `_tidb_rowid` when the upstream is a TiDB v3.x cluster, which helps reduce TiDB's memory usage #306

  - TiCDC

    * Improve the error message returned when a PD endpoint misses the certificate #1973
    * Make the sorter I/O errors more user-friendly #1976
    * Add a concurrency limit on the Region incremental scan in the KV client to reduce the pressure of TiKV #1926
    * Add metrics for the table memory consumption #1884
    * Add `capture-session-ttl` to the TiCDC server configuration #2169

16.15.3.4 Bug fixes

- TiDB

  - Fix the issue that the `SELECT` result is incompatible with MySQL when joining a subquery with a `WHERE` clause evaluated to `false` #24865
  - Fix the calculation error of the `ifnull` function that occurs when the argument is the `ENUM` or `SET` type #24944
  - Fix the wrong aggregate pruning in some cases #25202
  - Fix the incorrect result of the merge join operation that might occur when the column is the `SET` type #25669
  - Fix the issue that TiDB returns wrong results for cartesian join #25591
  - Fix the panic issue that occurs when `SELECT ... FOR UPDATE` works on a join operation and the join uses a partitioned table #20028
  - Fix the issue that the cached `prepared` plan is incorrectly used for `point get` #24741
  - Fix the issue that the `LOAD DATA` statement can abnormally import non-utf8 data #25979

  - Fix a potential memory leak issue that occurs when accessing the statistics via an HTTP API #24650
  - Fix a security issue that occurs when executing the `ALTER USER` statement #25225
  - Fix a bug that the `TIKV_REGION_PEERS` table cannot correctly handle the `DOWN` status #24879
  - Fix the issue that invalid strings are not truncated when parsing `DateTime` #22231
  - Fix the issue that the `select into outfile` statement might have no result when the column type is `YEAR` #22159
  - Fix the issue that the query result might be wrong when `NULL` is in the `UNION` subquery #26532
  - Fix the issue that the projection operator in execution might cause panic in some cases #26534

- TiKV

  - Fix the issue that the duration calculation might panic on certain platforms #related-issue
  - Fix the wrong function that casts `DOUBLE` to `DOUBLE` #25200
  - Fix the issue that the panic log might be lost when using the async logger #8998
  - Fix the panic issue that occurs when building a snapshot twice if encryption is enabled #9786 #10407
  - Fix the wrong arguments type of the `json_unquote()` function in the coprocessor #10176
  - Fix the issues of suspicious warnings during shutdown and the non-deterministic response from Raftstore #10353 #10307
  - Fix the issue of backup threads leak #10287
  - Fix the issue that Region split might panic and corrupt the metadata if the split process is too slow and Region merge is on-going #8456 #8783
  - Fix the issue that the Region heartbeats prevent TiKV from splitting large Regions in some situations #10111
  - Fix the wrong statistics caused by the format inconsistency of CM Sketch between TiKV and TiDB #25638
  - Fix the wrong statistics of the `apply wait duration` metric #9893
  - Fix the "Missing Blob" error after using `delete_files_in_range` in Titan #10232

- PD

  - Fix a bug that the scheduler might reappear after executing the delete operation #2572
  - Fix the data race issue that might occur when the scheduler is started before the temporary configuration is loaded #3771
  - Fix a PD panic issue that might occur during the Region scattering operation #3761
  - Fix the issue that the priority of some operators is not set correctly #3703

  - Fix a PD panic issue that might occur when deleting the `evict-leader` scheduler from a non-existent store #3660
  - Fix the issue that the PD Leader re-election is slow when there are many stores #3697

- TiDB Dashboard

  - Fix the issue that the **Profiling** UI cannot profile all TiDB instances #944
  - Fix the issue that the **Statements** UI does not display "Plan Count" #939
  - Fix the issue that the **Slow Query** UI might display the "unknown field" error after cluster upgrade #902

- TiFlash

  - Fix the potential panic issue that occurs when compiling DAG requests
  - Fix the panic issue that occurs when the read load is heavy
  - Fix the issue that TiFlash keeps restarting because of the split failure in column storage
  - Fix a potential bug that TiFlash cannot delete the delta data
  - Fix the incorrect results that occur when cloning the shared delta index concurrently
  - Fix a bug that TiFlash fails to restart in the case of incomplete data
  - Fix the issue that the old dm files cannot be removed automatically
  - Fix the panic issue that occurs when executing the `SUBSTRING` function with specific arguments
  - Fix the issue of incorrect results when casting the `INTEGER` type to the `TIME` type

- Tools

  - Backup & Restore (BR)

    * Fix the issue that the data restore from the `mysql` schema might fail #1142

  - TiDB Lightning

    * Fix the issue that TiDB Lightning fails to parse the `DECIMAL` type data in Parquet files #1276
    * Fix the EOF error reported when TiDB Lightning splits the imported large CSV files #1133
    * Fix a bug that an excessively large base value is generated when TiDB Lightning imports tables with the `auto_increment` column of the `FLOAT` or `DOUBLE` type #1185
    * Fix the issue of TiDB Lightning panic that occurs when generating KV data larger than 4 GB #1128

  - Dumpling

    * When using Dumpling to export data to the S3 storage, the `s3:ListBucket` ↪ permission is no longer required on the entire bucket. The permission is required only on the data source prefix. #898

- TiCDC
  * Fix the issue of extra partition dispatching after adding new table partitions #2205
  * Fix the panic issue that occurs when TiCDC fails to read `/proc/meminfo` #2023
  * Reduce TiCDC's runtime memory consumption #2011 #1957
  * Fix a bug that some MySQL connection might leak after MySQL sink meets the error and pauses #1945
  * Fix the issue that TiCDC changefeed cannot be created when start TS is less than current TS minus GC TTL #1839
  * Reduce memory `malloc` in sort heap to avoid too much CPU overhead #1853
  * Fix a bug that the replication task might stop when moving a table #1827

16.15.4 TiDB 4.0.13 Release Notes

Release date: May 28, 2021

TiDB version: 4.0.13

16.15.4.1 New Features

- TiDB
  - Support changing an `AUTO_INCREMENT` column to an `AUTO_RANDOM` one #24608
  - Add the `infoschema.client_errors_summary` tables to help users keep track of the errors that have been returned to clients #23267

16.15.4.2 Improvements

- TiDB
  - Avoid frequently reading the `mysql.stats_histograms` table if the cached statistics is up-to-date to avoid high CPU usage #24352
- TiKV
  - Make the calculation process of `store used size` more precise #9904
  - Set more Regions in the `EpochNotMatch` message to reduce Region misses #9731
  - Speed up freeing the memory accumulated in the long-running cluster #10035
- PD
  - Optimize the metrics of TSO processing time to help users determine whether the TSO processing time at the PD side is too long #3524

  - Update the dashboard version to v2021.03.12.1 #3469

- TiFlash

  - Automatically clean archived data to free up disk space

- Tools

  - Backup & Restore (BR)

    * Support backing up user tables created in the `mysql` schema #1077
    * Update `checkVersion` to check the cluster data and the backup data #1090
    * Tolerate a small number of TiKV node failures during backup #1062

  - TiCDC

    * Implement the processor flow control to avoid memory overflow (OOM) #1751
    * Support cleaning up stale temporary files in Unified Sorter and prevent multiple `cdc server` instances from sharing the same `sort-dir` directory #1741
    * Add the HTTP handler for the failpoint #1732

16.15.4.3 Bug Fixes

- TiDB

  - Fix the panic issue that occurs when the `UPDATE` statement with a subquery updates the generated column #24658
  - Fix the issue that causes duplicate query results when using the multi-column index for data reads #24634
  - Fix the issue that causes wrong query result when using the `BIT` type constant as the divisor in the DIV expression #24266
  - Fix the issue that the `NO_ZERO_IN_DATE` SQL mode does not take effect for the default column value set in DDL statements #24185
  - Fix an issue which causes wrong query results when using `UNION` between a `BIT` type column and an `INTEGER` type column #24026
  - Fix the issue that the `TableDual` plans are mistakenly created when comparing the `BINARY` type and the `CHAR` type #23917
  - Fix the issue that the `insert ignore on duplicate` statement might unexpectedly delete table records #23825
  - Fix the issue that the Audit plugin causes TiDB panic #23819
  - Fix the issue that the `HashJoin` operator incorrectly processes the collation #23812
  - Fix the issue of disconnection that occurs when `batch_point_get` incorrectly handles abnormal values in the pessimistic transaction #23778

- Fix the issue of inconsistent indexes that occurs when the `tidb_row_format_version` ↪ configuration value is set to `1` and the `enable_new_collation` value is set to `true` #23772
- Fix a bug that occurs when comparing the `INTEGER` type column with the `STRING` constant value #23705
- Fix the error that occurs when the `BIT` type column is passed into the `approx_percent` function #23702
- Fix a bug that causes TiDB to mistakenly report the `TiKV server timeout` error when executing TiFlash batch requests #23700
- Fix the issue that the `IndexJoin` operator returns wrong results on the prefix column index #23691
- Fix the issue which causes wrong query results because the collation on the `BINARY` type column is not properly handled #23598
- Fix the issue of query panic that occurs when the `UPDATE` statement contains the join query with the `HAVING` clause #23575
- Fix the issue that causes TiFlash to return wrong results when using the `NULL` constant in the comparison expression #23474
- Fix the issue of wrong results when comparing the `YEAR` type column with the `STRING` constant #23335
- Fix the issue that `group_concat` panics when `session.group_concat_max_len` is set too small #23257
- Fix the issue of wrong query results that occurs when using the `BETWEEN` expression for the `TIME` type column #23233
- Fix the issue of privilege check in the `DELETE` statements #23215
- Fix the issue that no error is reported when inserting invalid strings to the `DECIMAL` type column #23196
- Fix the issue of parsing error occurred when inserting data to the `DECIMAL` type columns #23152
- Fix the issue that the `USE_INDEX_MERGE` hint does not take effect #22924
- Fix a bug that the query returns wrong results when using `ENUM` or `SET` columns in the `WHERE` clause as an filter #22814
- Fix a bug that the query returns wrong results when using the clustered index and the new collation at the same time #21408
- Fix the panic that occurs when executing `ANALYZE` with `enable_new_collation` enabled #21299
- Fix the issue that SQL views does not correctly handle the default roles associated with the SQL DEFINER #24531
- Fix the issue that cancelling DDL jobs gets stuck #24445
- Fix the issue that the `concat` function incorrectly handles the collation #24300
- Fix a bug that the query returns wrong results when the `SELECT` field has an `IN` subquery and the subquery's outer side contains `NULL` tuples #24022
- Fix a bug that TiFlash is chosen wrongly by the optimizer when `TableScan` is in descending order #23974
- Fix a bug that the `point_get` plan returns the column name that is inconsistent with that of MySQL #23970

  - Fix the issue that executing the `show table status` statement on a database with a upper-cased name returns wrong results #23958
  - Fix a bug that the users who do not have the `INSERT` and `DELETE` privileges on a table at the same time can perform the `REPLACE` operation #23938
  - Fix the issue that the results of the `concat`/`make_set`/`insert` expressions are wrong because the collation is incorrectly handled #23878
  - Fix the panic that occurs when executing a query on the table that has `RANGE` partitions #23689
  - Fix the issue: In the cluster of an earlier version, if the `tidb_enable_table_partition` ↪ variable is set to `false`, the tables that contain partitions are handled as non-partitioned tables. Executing `batch point get` queries on this table, when the cluster is upgraded to a later version, causes connection panic. #23682
  - Fix the issue that when TiDB is configured to listen on TCP and UNIX sockets, the remote hosts over the TCP connection are not correctly validated for connection #23513
  - Fix a bug that the non-default collation causes wrong query results #22923
  - Fix a bug that the **Coprocessor Cache** panel of Grafana does not work #22617
  - Fix the error that occurs when the optimizer accesses the statistic cache #22565

- TiKV

  - Fix a bug that TiKV cannot start if the `file_dict` file is not fully written into the disk that has been full #9963
  - Limit TiCDC's scan speed at 128MB/s by default #9983
  - Reduce the memory usage of TiCDC's initial scan #10133
  - Support the back pressure for TiCDC's scan speed #10142
  - Fix a potential OOM issue by avoiding unnecessary reads to get TiCDC old values #10031
  - Fix a TiCDC OOM issue caused by reading old values #10197
  - Add a timeout mechanism for S3 storages to avoid the client hanging without responses #10132

- TiFlash

  - Fix the issue that number of `delta-merge-tasks` is not reported to Prometheus
  - Fix the TiFlash panic issue that occurs during `Segment Split`
  - Fix the issue that the `Region write Duration (write blocks)` panel in Grafana is shown in a wrong place
  - Fix the potential issue that the storage engine fails to remove data
  - Fix the issue of incorrect results when casting the `TIME` type to the `INTEGER` type
  - Fix a bug that the behavior of the `bitwise` operator is different from that of TiDB
  - Fix the issue of incorrect results when casting the `STRING` type to the `INTEGER` type
  - Fix the issue that consecutive and fast writes might make TiFlash out of memory

  - Fix the potential issue that the exception of null pointer might be raised during the table GC
  - Fix the TiFlash panic issue that occurs when writing data to dropped tables
  - Fix the TiFlash panic issue that occurs during BR restore
  - Fix a bug that the weights of some characters are wrong when using the general CI collation
  - Fix the potential issue that data will be lost in tombstoned tables
  - Fix the issue of incorrect results when comparing the string which contains zero bytes
  - Fix the issue that the logical function returns wrong results if the input column contains null constants
  - Fix the issue that the logical function only accepts the numeric type
  - Fix the issue of incorrect results that occurs when the timestamp value is `1970-01-01` and the timezone offset is negative
  - Fix the issue that hash value of `Decimal256` is not stable

- Tools

  - TiCDC

    * Fix the deadlock issue caused by the flow control when the sorter's input channel has been blocked #1779
    * Fix the issue that the TiKV GC safe point is blocked due to the stagnation of TiCDC changefeed checkpoint #1756
    * Revert the update in `explicit_defaults_for_timestamp` which requires the `SUPER` privilege when replicating data to MySQL #1749

  - TiDB Lightning

    * Fix a bug that TiDB Lightning's TiDB-backend cannot load any data when autocommit is disabled

16.15.5 TiDB 4.0.12 Release Notes

Release date: April 2, 2021

TiDB version: 4.0.12

16.15.5.1 New Features

- TiFlash

  - Add tools to check the status of `tiflash replica` for online rolling updates

16.15.5.2 Improvements

- TiDB
  - Refine the output information of the `EXPLAIN` statement for the `batch cop` mode #23164
  - Add the warning information for expressions that cannot be pushed to the storage layer in the output of the `EXPLAIN` statement #23020
  - Migrate a part of the DDL package code from `Execute`/`ExecRestricted` to the safe API (2) #22935
  - Migrate a part of the DDL package code from `Execute`/`ExecRestricted` to the safe API (1) #22929
  - Add `optimization-time` and `wait-TS-time` into the slow log #22918
  - Support querying `partition_id` from the `infoschema.partitions` table #22489
  - Add `last_plan_from_binding` to help the users know whether a SQL statement's execution plan is matched with the hints in the binding #21430
  - Scatter truncated tables without the `pre-split` option #22872
  - Add three format specifiers for the `str_to_date` expression #22812
  - Record the `PREPARE` execution failure as `Failed Query OPM` in the metrics monitor #22672
  - Do not report errors for the `PREPARE` execution if `tidb_snapshot` is set #22641
- TiKV
  - Prevent a large number of reconnections in a short period of time #9879
  - Optimize the write operations and Batch Get in the scenarios of many tombstones #9729
  - Change the default value of `leader-transfer-max-log-lag` to `128` to increase the success rate of leader transfer #9605
- PD
  - Update the Region cache only when `pending-peers` or `down-peers` changes, which reduces the pressure of updating heartbeats #3471
  - Prevent the Regions in `split-cache` from becoming the target of merge #3459
- TiFlash
  - Optimize the configuration file and remove useless items
  - Reduce the size of TiFlash binary files
  - Use an adaptive aggressive GC strategy to reduce memory usage
- Tools
  - TiCDC

    * Add a double confirmation when users create or resume the changefeed with the `start-ts` or `checkpoint-ts` 1 day before the current timestamp #1497
    * Add Grafana panels for the Old Value feature #1571
  - Backup & Restore (BR)
    * Log the `HTTP_PROXY` and `HTTPS_PROXY` environmental variables #827
    * Improve the backup performance when there are many tables #745
    * Report errors if the service safe point check fails #826
    * Add the `cluster_version` and `br_version` information in `backupmeta` #803
    * Add retry for external storage errors to increase the success rate of backup #851
    * Reduce memory usage during backup #886
  - TiDB Lightning
    * Check the TiDB cluster version before running TiDB Lightning to avoid unexpected errors #787
    * Fail fast when TiDB Lightning meets the `cancel` error #867
    * Add `tikv-importer.engine-mem-cache-size` and `tikv-importer.local-writer-mem-cache-size` configuration items to balance between memory usage and performance #866
    * Run `batch split region` in parallel for TiDB Lightning's Local-backend to increase the import speed #868
    * When using TiDB Lightning to import data from a S3 storage, TiDB Lightning no longer requires the `s3:ListBucket` permission #919
    * When resuming from a checkpoint, TiDB Lightning keeps using the original engine #924

16.15.5.3 Bug Fixes

- TiDB
  - Fix the issue that the `get` variable expression goes wrong when the session variable is hexadecimal literals#23372
  - Fix the issue that wrong collation is used when creating the fast execution plan for the `Enum` or `Set` type #23292
  - Fix the possible wrong result of the `nullif` expression when it is used with `isnull` #23279
  - Fix the issue that the auto-analysis is triggered outside its time range #23219
  - Fix the issue that the `CAST` function might ignore errors for the `point get` plan #23211
  - Fix a bug that prevents SPM from taking effect when `CurrentDB` is empty #23209
  - Fix the issue of possible wrong table filters for the IndexMerge plan #23165
  - Fix the issue of unexpected `NotNullFlag` in the returning types of the `NULL` constant #23135
  - Fix a bug that collation might not be handled by the text type #23092

  - Fix the issue that the range partition might incorrectly handle the `IN` expression #23074
  - Fix the issue that after marking a TiKV store as tombstone, starting new TiKV stores with different StoreIDs with the same IP address and port keeps returning the `StoreNotMatch` error #23071
  - Do not adjust the `INT` type when it is `NULL` and compared with `YEAR` #22844
  - Fix the issue of lost connection when loading data on tables with the `auto_random` column #22736
  - Fix the issue of DDL hangover when the DDL operation meets panic in the cancelling path #23297
  - Fix the wrong key range of index scan when comparing the `YEAR` column with `NULL` #23104
  - Fix the issue that a successfully created view is failed to use #23083

- TiKV

  - Fix the issue that the `IN` expression does not properly handle unsigned/signed integers #9850
  - Fix the issue that the ingest operation is not re-entrant #9779
  - Fix the issue that the space is missed when converting JSON to string in TiKV coprocessor #9666

- PD

  - Fix a bug that the isolation level is wrong when the store lacks the label #3474

- TiFlash

  - Fix the issue of incorrect execution results when the default value of the `binary` type column contains leading or tailing zero bytes
  - Fix a bug that TiFlash fails to synchronize schema if the name of the database contains special characters
  - Fix the issue of incorrect results when handling the `IN` expression with decimal values
  - Fix a bug that the metric for the opened file count shown in Grafana is high
  - Fix a bug that TiFlash does not support the `Timestamp` literal
  - Fix the potential not responding issue while handling the `FROM_UNIXTIME` expression
  - Fix the issue of incorrect results when casting string as integer
  - Fix a bug that the `like` function might return wrong results

- Tools

  - TiCDC

    * Fix a disorder issue of the `resolved ts` event #1464

    * Fix a data loss issue caused by wrong table scheduling due to the network problem #1508
    * Fix a bug of untimely release of resources after a processor is stopped #1547
    * Fix a bug that the transaction counter is not correctly updated, which might cause database connection leak #1524
    * Fix the issue that multiple owners can co-exist when PD has jitter, which might lead to table missing #1540
  - Backup & Restore (BR)
    * Fix a bug that `WalkDir` for the s3 storage returns `nil` if the target path is bucket name #733
    * Fix a bug that the `status` port is not served with TLS #839
  - TiDB Lightning
    * Fix the error that TiKV Importer might ignore that the file has already existed #848
    * Fix a bug that the TiDB Lightning might use the wrong timestamp and read the wrong data #850
    * Fix a bug that TiDB Lightning's unexpected exit might cause damaged checkpoint file #889
    * Fix the issue of possible data error that occurs because the `cancel` error is ignored #874

16.15.6 TiDB 4.0.11 Release Notes

Release date: February 26, 2021

TiDB version: 4.0.11

16.15.6.1 New Features

- TiDB
  - Support the `utf8_unicode_ci` and `utf8mb4_unicode_ci` collations #22558
- TiKV
  - Support the `utf8mb4_unicode_ci` collation #9577
  - Support the `cast_year_as_time` collation #9299
- TiFlash
  - Add a Coprocessor thread pool to queue Coprocessor requests for execution, which avoids out of memory (OOM) in some cases, and add the `cop_pool_size` ↪ and `batch_cop_pool_size` configuration items with the default values of `NumOfPhysicalCores * 2`

16.15.6.2 Improvements

- TiDB
  - Reorder inner joins that are simplified from outer joins #22402
  - Support multiple clusters in Grafana dashboards #22534
  - Add a workaround for the issue of multiple statements #22468
  - Divide the metrics of slow query into `internal` and `general` #22405
  - Add interface for `utf8_unicode_ci` and `utf8mb4_unicode_ci` collations #22099
- TiKV
  - Add metrics of server information for DBaaS #9591
  - Support multiple clusters in Grafana dashboards #9572
  - Report RocksDB metrics to TiDB #9316
  - Record the suspension time for Coprocessor tasks #9277
  - Add thresholds of key counts and key size for Load Base Split #9354
  - Check whether the file exists before data import #9544
  - Improve Fast Tune panels #9180
- PD
  - Support multiple clusters in Grafana dashboards #3398
- TiFlash
  - Optimize the performance of the `date_format` function
  - Optimize the memory consumption of handling ingest SST
  - Optimize the retrying logic in Batch Coprocessor to reduce the probability of Region error
- Tools
  - TiCDC
    - Add the version information in the `capture` metadata and add the CLI version of a `changefeed` in the `changefeed` metadata #1342
  - TiDB Lightning
    - Create tables in parallel to improve import performance #502
    - Skip splitting Regions to improve import performance if the engine's total size is smaller than the Region size #524
    - Add a import progress bar and optimize the accuracy of restore progress #506

16.15.6.3 Bug Fixes

- TiDB
  - Fix the issue of abnormal `unicode_ci` constant propagation #22614
  - Fix the issue that might cause wrong collation and coercibility #22602
  - Fix the issue that might cause wrong collation results #22599
  - Fix the issue of constant substitution for different collations #22582
  - Fix a bug that the `like` function might return wrong result when using collation #22531
  - Fix the issue of incorrect `duration` type inference in `least` and `greatest` functions #22580
  - Fix a bug that occurs when the `like` function handles a single character wildcard (`_`) followed by a multiple character wildcard (`%`) #22575
  - Fix the type inference error of the TiDB's built-in functions (`least` and `greatest`) #22562
  - Fix a bug that makes the `like` function get the wrong result if the pattern string is a unicode string #22529
  - Fix a bug that the point get query does not get the snapshot data when the `@@tidb_snapshot` variable is set #22527
  - Fix the potential panic that occurs when generating hints from joins #22518
  - Fix the issue that strings are incorrectly converted to the `BIT` type #22420
  - Fix the `index out of range` error that occurs when inserting values to the `tidb_rowid` column #22359
  - Fix a bug that the cached plan is incorrectly used #22353
  - Fix the runtime panic in the `WEIGHT_STRING` function when the length of the binary/char string is too large #22332
  - Forbid using the generated column when the number of function parameters is invalid #22174
  - Correctly set the process information before building the execution plan #22148
  - Fix the issue of inaccurate runtime statistics of `IndexLookUp` #22136
  - Add cache for the memory usage information when the cluster is deployed in a container #22116
  - Fix the issue of the decoding plan errors #22022
  - Report errors for using invalid window specifications #21976
  - Report errors when the `PREPARE` statement is nested with `EXECUTE`, `DEALLOCATE` or `PREPARE` #21972
  - Fix the issue that no error is reported when the `INSERT IGNORE` statement is used on a non-existing partition #21971
  - Unify the encoding of `EXPLAIN` results and slow log #21964
  - Fix the issue of unknown columns in join when using the aggregate operator #21957
  - Fix the wrong type inference in the `ceiling` function #21936
  - Fix the issue that the `Double` type column ignores its decimal #21916
  - Fix the issue that the correlated aggregation is calculated in subqueries #21877

  - Report errors for the JSON object with key length >= 65536 #21870
  - Fix the issue that the `dyname` function is incompatible with MySQL #21850
  - Fix the issue that the `to_base64` function returns `NULL` when the input data is too long #21813
  - Fix the failure of comparing multiple fields in the subquery #21808
  - Fix the issue that occurs when comparing the float type in JSON #21785
  - Fix the issue that occurs when comparing the types of JSON objects #21718
  - Fix the issue that the coercibility value of the `cast` function is incorrectly set #21714
  - Fix an unexpected panic when using the `IF` function #21711
  - Fix the issue that the `NULL` result returned from JSON search is incompatible with MySQL #21700
  - Fix the issue that occurs when checking the `only_full_group_by` mode using `ORDER BY` and `HAVING` #21697
  - Fix the issue that the units of `Day` and `Time` are incompatible with MySQL #21676
  - Fix the issue that the default values of `LEAD` and `LAG` cannot adapt to the field type #21665
  - Perform a check to ensure that the `LOAD DATA` statement can only load data into base tables #21638
  - Fix the issue that occurs when `addtime` and `subtime` functions handle invalid arguments #21635
  - Change the round rule for approximate values to "round to the nearest even number" #21628
  - Fix the issue that `WEEK()` does not recognize `@@GLOBAL.default_week_format` until it has been explicitly read #21623

- TiKV

  - Fix the issue that TiKV is failed to build with `PROST=1` #9604
  - Fix the unmatched memory diagnostics #9589
  - Fix the issue that the end key of a partial RawKV-restore range is inclusive #9583
  - Fix the issue of TiKV panic that occurs when loading the old value of a key of a rolled-back transaction during TiCDC's incremental scan #9569
  - Fix the configuration glitch of old values when changefeeds with different settings connect to one Region #9565
  - Fix a crash issue that occurs when running a TiKV cluster on a machine with a network interface that lacks the MAC address (introduced in v4.0.9) #9516
  - Fix the issue of TiKV OOM when backing up a huge Region #9448
  - Fix the issue that `region-split-check-diff` cannot be customized #9530
  - Fix the issue of TiKV panic when the system time goes back #9542

- PD

  - Fix the issue that member health metrics are incorrectly displayed #3368
  - Forbid removing the tombstone store that still has peers #3352

  - Fix the issue that the store limit cannot be persisted #3403
  - Fix the limit constriction of the scatter range scheduler #3401

- TiFlash

  - Fix a bug that the `min/max` result is wrong for the decimal type
  - Fix a bug that TiFlash might crash when reading data
  - Fix the issue that some data written after DDL operations might be lost after data compaction
  - Fix the issue that TiFlash incorrectly handles decimal constants in Coprocessor
  - Fix the potential crash during the learner read process
  - Fix the inconsistent behaviors of division by `0` or `NULL` between TiDB and TiFlash

- Tools

  - TiCDC

    * Fix a bug that the TiCDC service might unexpectedly exit when `ErrTaskStatusNotExists` and the closing of `capture` session occur at the same time #1240
    * Fix the old value switch issue that a `changefeed` might be affected by another `changefeed` #1347
    * Fix a bug that the TiCDC service might hang when processing a new `changefeed` with the invalid `sort-engine` parameter #1309
    * Fix the issue of panic that occurs when getting the debugging information on non-owner nodes #1349
    * Fix the issue that the `ticdc_processor_num_of_tables` and `ticdc_processor_table_res`
      ↪ metrics are not properly updated when adding or removing tables #1351
    * Fix the issue of potential data loss if a processor crashes when adding a table #1363
    * Fix a bug that the owner might lead to abnormal TiCDC server exits during table migrations #1352
    * Fix a bug that TiCDC does not exit in time after the service GC safepoint is lost #1367
    * Fix a bug that the KV client might skip creating the event feed #1336
    * Fix a bug that the atomicity of transactions is broken when the transactions are replicated to the downstream #1375

  - Backup & Restore (BR)

    * Fix the issue that TiKV might be caused to generate a big Region after BR restores the backup #702
    * Fix the issue that BR restores a table's Auto ID even if the table does not have Auto ID #720

  - TiDB Lightning

    * Fix a bug that `column count mismatch` might be triggered when using the TiDB-backend #535

    * Fix a bug that TiDB-backend panics if the column count of the source file and the column count of the target table mismatch #528
    * Fix a bug that TiKV might unexpectedly panic during TiDB Lightning's data import #554

16.15.7 TiDB 4.0.10 Release Notes

Release date: January 15, 2021

TiDB version: 4.0.10

16.15.7.1 New Features

- PD
    - Add the `enable-redact-log` configuration item to redact user data from logs #3266
- TiFlash
    - Add the `security.redact_info_log` configuration item to redact user data from logs

16.15.7.2 Improvements

- TiDB
    - Make the size limit of a key-value entry in transaction configurable using `txn-entry-size-limit` #21843
- PD
    - Optimize the `store-state-filter` metrics to show more information #3100
    - Upgrade the `go.etcd.io/bbolt` dependency to v1.3.5 #3331
- Tools
    - TiCDC
        * Enable the old value feature for the `maxwell` protocol #1144
        * Enable the unified sorter feature by default #1230
    - Dumpling
        * Support checking unrecognized arguments and printing the current progress during dumping #228
    - TiDB Lightning
        * Support retrying the error that occurs when reading from S3 #533

16.15.7.3 Bug Fixes

- TiDB
  - Fix a concurrency bug that might cause the batch client timeout #22336
  - Fix the issue of duplicate bindings caused by concurrent baseline capture #22295
  - Make the baseline capture bound to the SQL statement work when the log level is `'debug'` #22293
  - Correctly release GC locks when Region merge occurs #22267
  - Return correct values for user variables of the `datetime` type #22143
  - Fix the issue of using index merge when there are multiple table filters #22124
  - Fix the `wrong precision` issue in TiFlash caused by the `prepare` plan cache #21960
  - Fix the issue of incorrect results caused by schema change #21596
  - Avoid unnecessary column flag changes in `ALTER TABLE` #21474
  - Set the database name for table aliases of query blocks used in optimizer hints #21380
  - Generate the proper optimizer hint for `IndexHashJoin` and `IndexMergeJoin` #21020
- TiKV
  - Fix the wrong mapping between ready and peer #9409
  - Fix the issue that some logs are not redacted when `security.redact-info-log` is set to `true` #9314
- PD
  - Fix the issue that the ID allocation is not monotonic #3308 #3323
  - Fix the issue that the PD client might be blocked in some cases #3285
- TiFlash
  - Fix the issue that TiFlash fails to start because TiFlash fails to process the TiDB schema of an old version
  - Fix the issue that TiFlash fails to start due to incorrect handling of `cpu_time` on the RedHat system
  - Fix the issue that TiFlash fails to start when `path_realtime_mode` is set to `true`
  - Fix an issue of incorrect results when calling the `substr` function with three parameters
  - Fix the issue that TiFlash does not support changing the `Enum` type even if the change is lossless
- Tools
  - TiCDC

    * Fix the `maxwell` protocol issues, including the issue of `base64` data output and the issue of outputting TSO to unix timestamp #1173
    * Fix a bug that outdated metadata might cause the newly created changefeed abnormal #1184
    * Fix the issue of creating the receiver on the closed notifier #1199
    * Fix a bug that the TiCDC owner might consume too much memory in the etcd watch client #1227
    * Fix the issue that `max-batch-size` does not take effect #1253
    * Fix the issue of cleaning up stale tasks before the capture information is constructed #1280
    * Fix the issue that the recycling of db conn is block because `rollback` is not called in MySQL sink #1285
  - Dumpling
    * Avoid TiDB out of memory (OOM) by setting the default behavior of `tidb_mem_quota_query` #233
  - Backup & Restore (BR)
    * Fix the issue that BR v4.0.9 cannot restore the files backed up using BR v4.0.8 on GCS #688
    * Fix the issue that BR panics when the GCS storage URL has no prefix #673
    * Disable backup statistics by default to avoid BR OOM #693
  - TiDB Binlog
    * Fix the issue that when the `AMEND TRANSACTION` feature is enabled, Drainer might choose the incorrect schema version to generate SQL statements #1033
  - TiDB Lightning
    * Fix a bug that the Region is not split because the Region key is incorrectly encoded #531
    * Fix the issue that the failure of `CREATE TABLE` might be lost when multiple tables are created #530
    * Fix the issue of `column count mismatch` when using the TiDB-backend #535

16.15.8 TiDB 4.0.9 Release Notes

Release date: December 21, 2020

TiDB version: 4.0.9

16.15.8.1 Compatibility Changes

- TiDB
  - Deprecate the `enable-streaming` configuration item #21055

- TiKV
  - Reduce I/O and mutex contention when encryption at rest is enabled. The change is backwardly incompatible. If users need to downgrade the cluster to a version earlier than v4.0.9, `security.encryption.enable-file-dictionary-log` must be disabled and TiKV must be restarted before the downgrade. #9195

16.15.8.2 New Features

- TiFlash
  - Support storing the latest data of the storage engine on multiple disks (experimental)
- TiDB Dashboard
  - Support displaying and sorting by all fields in the **SQL Statements** page #749
  - Support zooming and panning the topology graph #772
  - Support displaying the disk usage information in the **SQL Statements** and **Slow Queries** pages #777
  - Support exporting list data in the **SQL Statements** and **Slow Queries** pages #778
  - Support customizing the Prometheus address #808
  - Add a page for cluster statistics #815
  - Add more time-related fields in the **Slow Queries** details #810

16.15.8.3 Improvements

- TiDB
  - Avoid the (index) merge join in a heuristical way when converting equal conditions to other conditions #21146
  - Differentiate the types of user variables #21107
  - Support setting the `GOGC` variable in the configuration file #20922
  - Make the dumped binary time (`Timestamp` and `Datetime`) more compatible with MySQL #21135
  - Provide an error message for statements that use the `LOCK IN SHARE MODE` syntax #21005
  - Avoid outputting unnecessary warnings or errors when folding constants in shortcut-able expressions #21040
  - Raise an error when preparing the `LOAD DATA` statement #21199
  - Ignore the attribute of the integer zero-fill size when changing the integer column types #20986
  - Add the executor-related runtime information of DML statements in the result of `EXPLAIN ANALYZE` #21066

  - Disallow multiple updates on the primary key in a singe SQL statements #21113
  - Add a monitoring metric for the connection idle time #21301
  - Temporarily enable the slow log when the `runtime/trace` tool is running #20578

- TiKV

  - Add the tag to trace the source of the `split` command #8936
  - Support dynamically changing the `pessimistic-txn.pipelined` configuration #9100
  - Reduce the impact on performance when running Backup & Restore and TiDB Lightning #9098
  - Add monitoring metrics for the ingesting SST errors #9096
  - Prevent the leader from being hibernated when some peers still need to replicate logs #9093
  - Increase the success rate of the pipelined pessimistic locking #9086
  - Change the default value of `apply-max-batch-size` and `store-max-batch-size` to `1024` #9020
  - Add the `max-background-flushes` configuration item #8947
  - Disable `force-consistency-checks` by default to improve performance #9029
  - Offload the queries on the Region size from `pd heartbeat worker` to `split check worker` #9185

- PD

  - Check the TiKV cluster version when a TiKV stores become `Tombstone`, which prevents users from enabling incompatible features during the process of downgrade or upgrade #3213
  - Disallow the TiKV store of a lower version to change from `Tombstone` back to `Up` #3206

- TiDB Dashboard

  - Keep expanding when "Expand" is clicked for SQL statements #775
  - Open detail pages in new windows for **SQL Statements** and **Slow Queries** #816
  - Improve descriptions for time-related fields in **Slow Queries** details #817
  - Display detailed error messages #794

- TiFlash

  - Reduce the latency of replica reads
  - Refine TiFlash's error messages
  - Limit the memory usage of cache data when the data volume is huge
  - Add a monitoring metric for the number of coprocessor tasks being handled

- Tools

- Backup & Restore (BR)
  * Disallow the ambiguous `--checksum false` argument in the command line, which does not correctly disable checksum. Only `--checksum=false` is accepted. #588
  * Support changing the PD configuration temporarily so that PD can recover the original configuration after BR accidentally exists #596
  * Support analyzing tables after restore #622
  * Retry for the `read index not ready` and `proposal in merging mode` errors #626
- TiCDC
  * Add an alert for enabling TiKV's Hibernate Region feature #1120
  * Reduce memory usage in the schema storage #1127
  * Add the feature of unified sorter, which accelerates replication when the data size of the incremental scan is large (experimental) #1122
  * Support configuring the maximum message size and the maximum message batch in the TiCDC Open Protocol message (only for Kafka sink) #1079
- Dumpling
  * Retry dumping data on failed chunks #182
  * Support configuring both the `-F` and `-r` arguments at the same time #177
  * Exclude system databases in `--filter` by default #194
  * Support the `--transactional-consistency` parameter and support rebuilding MySQL connections during retry #199
  * Support using the `-c,--compress` parameter to specify the compression algorithm used by Dumpling. An empty string means no compression. #202
- TiDB Lightning
  * Filter out all system schemas by default #459
  * Support setting a default value for the auto-random primary key for the Local-backend or Importer-backend #457
  * Use range properties to make the range split more precise in Local-backend #422
  * Support a human-readable format (such as "2.5 GiB") in `tikv-importer` ↪ `.region-split-size`, `mydumper.read-block-size`, `mydumper.batch-` ↪ `size`, and `mydumper.max-region-size` #471
- TiDB Binlog
  * Exit the Drainer process with the non-zero code if the upstream PD is down or if applying DDL or DML statements to the downstream fails #1012

16.15.8.4 Bug Fixes

- TiDB

- Fix the issue of incorrect results when using a prefix index with the `OR` condition #21287
- Fix a bug that might cause panic when automatic retry is enabled #21285
- Fix a bug that occurs when checking partition definition according to column type #21273
- Fix a bug that the value type of the partition expression is not consistent with the partition column type #21136
- Fix a bug that the hash-type partition does not check whether the partition name is unique #21257
- Fix the wrong results returned after inserting a value of the non-`INT` type into the hash partitioned table #21238
- Fix the unexpected error when using index join in the `INSERT` statement in some cases #21249
- Fix the issue that the `BigInt` unsigned column value in the `CASE WHEN` operator is incorrectly converted to the `BigInt` signed value #21236
- Fix a bug that index hash join and index merge join do not consider collation #21219
- Fix a bug that the partitioned table does not consider collation in the `CREATE TABLE` and `SELECT` syntax #21181
- Fix the issue that the query result of `slow_query` might miss some rows #21211
- Fix the issue that `DELETE` might not delete data correctly when the database name is not in a pure lower representation #21206
- Fix a bug that causes schema change after DML operations #21050
- Fix the bug that the coalesced column cannot be queried when using join #21021
- Fix the wrong results of some semi-join queries #21019
- Fix the issue that the table lock does not take effect on the `UPDATE` statement #21002
- Fix the issue of stack overflow that occurs when building the recursive view #21001
- Fix the unexpected result returned when performing index merge join operations on outer join #20954
- Fix the issue that sometimes a transaction that has an undetermined result might be treated as failed #20925
- Fix the issue that `EXPLAIN FOR CONNECTION` cannot show the last query plan #21315
- Fix the issue that when Index Merge is used in a transaction with the Read Committed isolation level, the result might be incorrect #21253
- Fix the auto-ID allocation failure caused by the transaction retry after the write conflict #21079
- Fix the issue that JSON data cannot be correctly imported to TiDB using `LOAD DATA` #21074
- Fix the issue that the default value of newly added `Enum`-type columns is incorrect #20998
- Fix the issue that the `adddate` function inserts invalid characters #21176
- Fix the issue that the wrong `PointGet` plan generated in some situations causes

wrong results #21244
  - Ignore the conversion of daylight saving time in the `ADD_DATE` function to be compatible with MySQL #20888
  - Fix a bug that prevents inserting strings with trailing spaces that exceed `varchar` or `char`'s length constraint #21282
  - Fix a bug that does not converting the integer from `[1, 69]` to `[2001, 2069]` or from `[70, 99]` to `[1970, 1999]` when comparing `int` with `year` #21283
  - Fix the panic caused by the overflowing result of the `sum()` function when calculating the `Double` type field #21272
  - Fix a bug that `DELETE` fails to add lock on the unique key #20705
  - Fix a bug that snapshot reads hits the lock cache #21539
  - Fix an issue of potential memory leak after reading a lot of data in a long-lived transaction #21129
  - Fix the issue that omitting the table alias in a subquery will have a syntax error returned #20367
  - Fix the issue that when the argument of the `IN` function in a query is the time type, the query might return an incorrect result #21290

- TiKV

  - Fix the issue that Coprocessor might return wrong results when there are more than 255 columns #9131
  - Fix the issue that Region Merge might cause data loss during network partition #9108
  - Fix the issue that the `ANALYZE` statement might cause panic when using the `latin1` character set #9082
  - Fix the wrong results returned when converting the numeric type to the time type #9031
  - Fix a bug that TiDB Lightning fails to ingest SST files to TiKV with the Importer-backend or Local-backend when Transparent Data Encryption (TDE) is enabled #8995
  - Fix the invalid `advertise-status-addr` value (`0.0.0.0`) #9036
  - Fix the issue that an error is returned indicating that a key exists when this key is locked and deleted in a committed transaction #8930
  - Fix the issue that the RocksDB cache mapping error causes data corruption #9029
  - Fix a bug that Follower Read might return stale data after the leader is transferred #9240
  - Fix the issue that stale old values might be read in the pessimistic lock #9282
  - Fix a bug that replica read might get stale data after the leader transfer #9240
  - Fix the issue of TiKV crash that occurs when receiving `SIGPROF` after profiling #9229

- PD

  - Fix the issue that the leader roles specified using placement rules do not take effect in some cases #3208

  - Fix the issue that the `trace-region-flow` value is unexpectedly set to `false` #3120
  - Fix a bug that the service safepoint with infinite Time To Live (TTL) does not work #3143

- TiDB Dashboard

  - Fix a display issue of time in the Chinese language #755
  - Fix a bug that the browser compatibility notice does not work #776
  - Fix the issue that the transaction `start_ts` is incorrectly displayed in some scenarios #793
  - Fix the issue that some SQL texts are incorrectly formatted #805

- TiFlash

  - Fix the issue that `INFORMATION_SCHEMA.CLUSTER_HARDWARE` might contain the information of disks that are not in use
  - Fix the issue that the estimate on memory usage of Delta Cache is smaller than the actual usage
  - Fix the memory leak caused by thread information statistics

- Tools

  - Backup & Restore (BR)

    * Fix the failure caused by special characters in S3 secret access keys #617

  - TiCDC

    * Fix the issue that multiple owners might exist when the owner campaign key is deleted #1104
    * Fix a bug that TiCDC might fail to continue replicating data when a TiKV node crashes or recovers from a crash. This bug only exists in v4.0.8. #1198
    * Fix the issue that the metadata is repeatedly flushed to etcd before a table is initialized #1191
    * Fix an issue of replication interruption caused by early GC or the latency of updating `TableInfo` when the schema storage caches TiDB tables #1114
    * Fix the issue that the schema storage costs too much memory when DDL operations are frequent #1127
    * Fix the goroutine leak when a changefeed is paused or stopped #1075
    * Increase the maximum retry timeout to 600 seconds in Kafka producer to prevent replication interruption caused by the service or network jitter in the downstream Kafka #1118
    * Fix a bug that the Kafka batch size does not take effect #1112
    * Fix a bug that some tables' row change might be lost when the network between TiCDC and PD has jitter and when there are paused changefeeds being resumed at the same time #1213

    * Fix a bug that the TiCDC process might exit when the network between TiCDC and PD is not stable #1218
    * Use a singleton PD client in TiCDC and fix a bug that TiCDC closes PD client by accident which causes replication block #1217
    * Fix a bug that the TiCDC owner might consume too much memory in the etcd watch client #1224
  - Dumpling
    * Fix the issue that Dumpling might get blocked when its connection to the MySQL database server is closed #190
  - TiDB Lightning
    * Fix the issue that keys are encoded using the wrong field information #437
    * Fix the issue that GC life time TTL does not take effect #448
    * Fix the issue that causes panic when manually stops the running TiDB Lightning in the Local-backend mode #484

16.15.9 TiDB 4.0.8 Release Notes

Release date: October 30, 2020

TiDB version: 4.0.8

16.15.9.1 New Features

- TiDB
  - Support the new aggregate function `APPROX_PERCENTILE` #20197
- TiFlash
  - Support pushing down `CAST` functions
- Tools
  - TiCDC
    * Support snapshot-level consistent replication #932

16.15.9.2 Improvements

- TiDB
  - Prioritize low-selectivity indexes in the greedy search procedure of `Selectivity()` #20154
  - Record more RPC runtime information in Coprocessor runtime statistics #19264

  - Speed up parsing the slow log to improve query performance #20556
  - Wait for timeout execution plans during the plan binding stage to record more debug information when the SQL optimizer is verifying potential new plans #20530
  - Add the execution retry time in the slow log and the slow query result #20495 #20494
  - Add the `table_storage_stats` system table #20431
  - Add the RPC runtime statistical information for the `INSERT/UPDATE/REPLACE` statement #20430
  - Add the operator information in the result of `EXPLAIN FOR CONNECTION` #20384
  - Adjust the TiDB error log to the `DEBUG` level for the client connection/disconnection activities #20321
  - Add monitoring metrics for Coprocessor Cache #20293
  - Add the runtime information of pessimistic lock keys #20199
  - Add two extra sections of time consumption information in the runtime information and `trace` span #20187
  - Add the runtime information of transaction commit in the slow log #20185
  - Disable the index merge join #20599
  - Add the ISO 8601 and timezone supports for temporal string literals #20670

- TiKV

  - Add the **Fast-Tune** panel page to assist performance diagnostics #8804
  - Add the `security.redact-info-log` configuration item, which redacts user data from logs #8746
  - Reformat the metafile of error codes #8877
  - Enable dynamically changing the `pessimistic-txn.pipelined` configuration #8853
  - Enable the memory profiling features by default #8801

- PD

  - Generate the metafile of errors #3090
  - Add the additional information for the operator #3009

- TiFlash

  - Add monitoring metrics of Raft logs
  - Add monitoring metrics of memory usage for `cop` tasks
  - Make the `min/max` index more accurate when data is deleted
  - Improve query performance in the case of a small data volume
  - Add the `errors.toml` file to support the standard error code

- Tools

  - Backup and Restore (BR)

    * Speed up the restore process by pipelining `split` and `ingest` #427

    * Support manually restoring PD schedulers #530
    * Use `pause` schedulers instead of `remove` schedulers #551
  - TiCDC
    * Print statistics in MySQL sink periodically #1023
  - Dumpling
    * Support dumpling data directly to S3 storages #155
    * Support dumping views #158
    * Support dumping the table that only contains generated columns #166
  - TiDB Lightning
    * Support multi-byte CSV delimiters and separators #406
    * Speed up the restore process by disabling some PD schedulers #408
    * Use the GC-TTL API for checksum GC safepoint in the v4.0 cluster to avoid the GC error #396

16.15.9.3 Bug Fixes

- TiDB
  - Fix the unexpected panic that occurs when using partitioned tables #20565
  - Fix the wrong result of outer join when filtering the outer side using index merge join #20427
  - Fix the issue that the `NULL` value is returned when converting data to the `BIT` type if the data is too long #20363
  - Fix the corrupted default value for the `BIT` type column #20340
  - Fix the overflow error that might occur when converting the `BIT` type to the `INT64` type #20312
  - Fix the possible wrong result of the propagate column optimization for the hybrid type column #20297
  - Fix the panic that might occur when storing outdated plans from the plan cache #20246
  - Fix the bug that the returned result is mistakenly truncated if `FROM_UNIXTIME` and `UNION ALL` are used together #20240
  - Fix the issue that wrong results might be returned when the `Enum` type value is converted to the `Float` type #20235
  - Fix the possible panic of `RegionStore.accessStore` #20210
  - Fix the wrong result returned when sorting the maximum unsigned integer in `BatchPointGet` #20205
  - Fix the bug that the coercibilities of `Enum` and `Set` are wrong #20364
  - Fix an issue of ambiguous `YEAR` conversion #20292
  - Fix the issue of wrong reported result that occurs when the **KV duration** panel contains `store0` #20260

  - Fix the issue that the `Float` type data is mistakenly inserted regardless of the `out of range` error #20252
  - Fix the bug that the generated column does not handle bad `NULL` values #20216
  - Fix the inaccurate error information for the `YEAR` type data that is out of range #20170
  - Fix the unexpected `invalid auto-id` error that might occur during the pessimistic transaction retry #20134
  - Fix the issue that the constraint is not checked when using `ALTER TABLE` to change the `Enum`/`Set` type #20046
  - Fix the wrong runtime information of `cop` tasks recorded when multiple operators are used for concurrency #19947
  - Fix the issue that read-only system variables cannot be explicitly selected as the session variables #19944
  - Fix the issue that the duplicate `ORDER BY` condition might cause sub-optimal execution plans #20333
  - Fix the issue that the generated metric profile might fail if the font size exceeds the maximum allowable value #20637

- TiKV

  - Fix the bug that the mutex conflict in encryption causes pd-worker to process heartbeats slowly #8869
  - Fix the issue that the memory profile is mistakenly generated #8790
  - Fix the failure to back up databases on GCS when the storage class is specified #8763
  - Fix the bug that a learner cannot find a leader when the Region is restarted or newly split #8864

- PD

  - Fix a bug that Key Visualizer of TiDB Dashboard might cause PD panic in some cases #3096
  - Fix the bug that PD might panic if a PD store is down for more than 10 minutes #3069

- TiFlash

  - Fix the issue of wrong timestamp in the log message
  - Fix the issue that during the multi-disk TiFlash deployment, the wrong capacity causes the creation of TiFlash replicas to fail
  - Fix the bug that TiFlash might throw errors about broken data files after restart
  - Fix the issue that broken files might be left on disk after TiFlash crashes
  - Fix the bug that it might take a long time to wait for index during learner reads if the proxy cannot catch up with the latest Raft lease information
  - Fix the bug that the proxy writes too much Region state information to the key-value engine while replaying the outdated Raft log

- Tools
  - Backup and Restore (BR)
    * Fix the `send on closed channel` panic during restore #559
  - TiCDC
    * Fix the unexpected exit caused by the failure to update the GC safepoint #979
    * Fix the issue that the task status is unexpectedly flushed because of the incorrect mod revision cache #1017
    * Fix the unexpected empty Maxwell messages #978
  - TiDB Lightning
    * Fix the issue of wrong column information #420
    * Fix the infinity loop that occurs when retrying to get Region information in the local mode #418

16.15.10 TiDB 4.0.7 Release Notes

Release date: September 29, 2020

TiDB version: 4.0.7

16.15.10.1 New Features

- PD
  - Add the `GetAllMembers` function in the PD client to get PD member information #2980
- TiDB Dashboard
  - Support generating the metrics relationship graph #760

16.15.10.2 Improvements

- TiDB
  - Add more runtime information for the `join` operator #20093
  - Add the hit ratio information of coprocessor cache in `EXPLAIN ANALYZE` #19972
  - Support pushing down the `ROUND` function to TiFlash #19967
  - Add the default value of `CMSketch` for `ANALYZE` #19927
  - Refine error message desensitization #20004
  - Accept connections from clients using connectors from MySQL 8.0 #19959

- TiKV
  - Support the JSON log format #8382
- PD
  - Count schedule operators when they are finished rather than added #2983
  - Set the `make-up-replica` operator to high priority #2977
- TiFlash
  - Improve the error handling of the Region meta change that occurs during reads
- Tools
  - TiCDC
    * Support translating more execution-efficient SQL statements in MySQL sink when the old value feature is enabled #955
  - Backup & Restore (BR)
    * Add connection retry when the connection is broken during backup #508
  - TiDB Lightning
    * Support dynamically updating the log level via the HTTP interface #393

16.15.10.3 Bug Fixes

- TiDB
  - Fix a vectorization bug from `and`/`or`/`COALESCE` caused by shortcut #20092
  - Fix the issue that plan digests are the same when the cop task stores are of different types #20076
  - Fix the wrong behavior of the `!= any()` function #20062
  - Fix the query error that occurs when the `slow-log` file does not exist #20051
  - Fix the issue that Region requests continue to retry when the context is canceled #20031
  - Fix the issue that querying the time type of the `cluster_slow_query` table in streaming request might result in an error #19943
  - Fix the issue that DML statements using `case when` might cause schema change #20095
  - Fix the issue that the `prev_stmt` information in slow log is not desensitized #20048
  - Fix the issue that tidb-server does not release the table lock when it exits abnormally #20020
  - Fix the incorrect error message that occurs when inserting data of the `ENUM` and `SET` type #19950

  - Fix the wrong behavior of the `IsTrue` function in some situations #19903
  - Fix the issue that the `CLUSTER_INFO` system table might not work normally after PD is scaled in or out #20026
  - Avoid unnecessary warnings or errors when folding constants in `control` expressions #19910
  - Update the method of updating statistics to avoid Out of Memory (OOM) #20013

- TiKV

  - Fix the issue of unavailable Status API when TLS handshake fails #8649
  - Fix the potential undefined behaviors #7782
  - Fix the possible panic caused by generating snapshots when executing `UnsafeDestroyRange` #8681

- PD

  - Fix the bug that PD might panic if some Regions have no Leader when `balance-region` is enabled #2994
  - Fix the statistical deviation of Region size and Region keys after Region merge #2985
  - Fix the incorrect hotspot statistics #2991
  - Fix the issue that there is no `nil` check in `redirectSchedulerDelete` #2974

- TiFlash

  - Fix the wrong result of right outer join

- Tools

  - Backup & Restore (BR)

    * Fix a bug that causes the TiDB configuration to change after the restore process #509

  - Dumpling

    * Fix the issue that Dumpling fails to parse metadata when some variables are `NULL` #150

16.15.11 TiDB 4.0.6 Release Notes

Release date: September 15, 2020

TiDB version: 4.0.6

16.15.11.1 New Features

- TiFlash
  - Support outer join in TiFlash broadcast join
- TiDB Dashboard
  - Add Query Editor and execution UI (experimental) #713
  - Support store location topology visualization #719
  - Add cluster configuration UI (experimental) #733
  - Support sharing the current session #741
  - Support displaying the number of execution plans in SQL Statement list #746
- Tools
  - TiCDC (GA since v4.0.6)
    * Support outputting data in the `maxwell` format #869

16.15.11.2 Improvements

- TiDB
  - Replace error codes and messages with standard errors #19888
  - Improve the write performance of partitioned table #19649
  - Record more RPC runtime information in `Cop Runtime` statistics #19264
  - Forbid creating tables in `metrics_schema` and `performance_schema` #19792
  - Support adjusting the concurrency of the union executor #19886
  - Support out join in broadcast join #19664
  - Add SQL digest for the process list #19829
  - Switch to the pessimistic transaction mode for autocommit statement retry #19796
  - Support the `%r` and `%T` data format in `Str_to_date()` #19693
  - Enable `SELECT INTO OUTFILE` to require the file privilege #19577
  - Support the `stddev_pop` function #19541
  - Add the `TiDB-Runtime` dashboard #19396
  - Improve compatibility for the `ALTER TABLE` algorithms #19364
  - Encode `insert`/`delete`/`update` plans in the slow log `plan` field #19269
- TiKV
  - Reduce QPS drop when `DropTable` or `TruncateTable` is being executed #8627
  - Support generating metafile of error codes #8619
  - Add performance statistics for cf scan details #8618
  - Add the `rocksdb perf context` panel in the Grafana default template #8467

- PD
  - Update TiDB Dashboard to v2020.09.08.1 #2928
  - Add more metrics for Region and store heartbeat #2891
  - Change back to the original way to control the low space threshold #2875
  - Support standard error codes
    * #2918 #2911 #2913 #2915 #2912
    * #2907 #2906 #2903 #2806 #2900 #2902
- TiFlash
  - Add Grafana panels for data replication (`apply Region snapshots` and `ingest SST files`)
  - Add Grafana panels for `write stall`
  - Add `dt_segment_force_merge_delta_rows` and `dt_segment_force_merge_delta_deletes` to adjust the threshold of `write stall`
  - Support setting `raftstore.snap-handle-pool-size` to `0` in TiFlash-Proxy to disable applying Region snapshot by multi-thread to reduce memory consumption during data replication
  - Support CN check on `https_port` and `metrics_port`
- Tools
  - TiCDC
    * Skip resolved lock during puller initialization #910
    * Reduce PD write frequency #937
  - Backup & Restore (BR)
    * Add real time cost in summary log #486
  - Dumpling
    * Support outputting `INSERT` with column names #135
    * Unify the `--filesize` and `--statement-size` definitions with those of mydumper #142
  - TiDB Lightning
    * Split and ingest Regions in more precise sizes #369
  - TiDB Binlog
    * Support setting GC time in `go time` package format #996

16.15.11.3 Bug Fixes

- TiDB
  - Fix an issue of collecting the `tikv_cop_wait` time in metric profile #19881

- Fix the wrong result of `SHOW GRANTS` #19834
- Fix the incorrect query result of `!= ALL (subq)` #19831
- Fix a bug of converting the `enum` and `set` types #19778
- Add a privilege check for `SHOW STATS_META` and `SHOW STATS_BUCKET` #19760
- Fix the error of unmatched column lengths caused by `builtinGreatestStringSig` ↪ and `builtinLeastStringSig` #19758
- If unnecessary errors or warnings occur, the vectorized control expresions fall back to their scalar execution #19749
- Fix the error of the `Apply` operator when the type of the correlation column is `Bit` #19692
- Fix the issue that occurs when the user queries `processlist` and `cluster_log` in MySQL 8.0 client #19690
- Fix the issue that plans of the same type have different plan digests #19684
- Forbid changing the column type from `Decimal` to `Int` #19682
- Fix the issue that `SELECT ... INTO OUTFILE` returns the runtime error #19672
- Fix the incorrect implementation of `builtinRealIsFalseSig` #19670
- Fix the issue that the partition expression check misses the parentheses expression #19614
- Fix a query error when there is an `Apply` operator upon `HashJoin` #19611
- Fix an incorrect result of vectorization that casts `Real` as `Time` #19594
- Fix the bug that the `SHOW GRANTS` statement shows grants for non-existent users #19588
- Fix a query error when there is an `Apply` executor upon `IndexLookupJoin` #19566
- Fix the wrong results when converting `Apply` to `HashJoin` on a partitioned table #19546
- Fix incorrect results when there is an `IndexLookUp` executor on the inner side of an `Apply` #19508
- Fix an unexpected panic when using view #19491
- Fix the incorrect result of the `anti-semi-join` query #19477
- Fix the bug that the `TopN` statistics is not deleted when the statistics is dropped #19465
- Fix a wrong result caused by mistaken usage of batch point get #19460
- Fix the bug that a column cannot be found in `indexLookupJoin` with a virtual generated column #19439
- Fix an error that different plans of the `select` and `update` queries compare datum #19403
- Fix a data race for TiFlash work index in Region cache #19362
- Fix the bug that the `logarithm` function does not show a warning #19291
- Fix an unexpected error that occurs when TiDB persists data to disks #19272
- Support using a single partitioned table on the inner side of index join #19197
- Fix the wrong hash key value generated for decimal #19188
- Fix the issue that TiDB returns a `no regions` error when table endKey and Region endKey are the same #19895
- Fix the unexpected success of alter partition #19891
- Fix the wrong value of the default maximum packet length allowed for pushed

down expressions #19876
  - Fix a wrong behavior for the `Max`/`Min` functions on the `ENUM`/`SET` columns #19869
  - Fix the read failure from the `tiflash_segments` and `tiflash_tables` system tables when some TiFlash nodes are offline #19748
  - Fix a wrong result of the `Count(col)` aggregation function #19628
  - Fix a runtime error of the `TRUNCATE` operation #19445
  - Fix the issue that `PREPARE statement FROM @Var` will fail when `Var` contains uppercase characters #19378
  - Fix the bug that schema charset modification in an uppercase schema will cause panic #19302
  - Fix the inconsistency of plans between `information_schema.statements_summary` ↪ and `explain`, when the information contains `tikv/tiflash` #19159
  - Fix the error in tests that the file does not exist for `select into outfile` #19725
  - Fix the issue that `INFORMATION_SCHEMA.CLUSTER_HARDWARE` does not have raid device information #19457
  - Make the `add index` operation that has a generated column with the `case-when` expression can exit normally when it encounters a parse error #19395
  - Fix the bug that the DDL operation takes too long to retry #19488
  - Make statements like `alter table db.t1 add constraint fk foreign key (` ↪ `c2)references t2(c1)` execute without first executing `use db` #19471
  - Change the dispatch error from the `Error` to the `Info` message in the server log file #19454

- TiKV

  - Fix the estimation error for a non-index column when collation is enabled #8620
  - Fix the issue that Green GC might miss locks during the process of Region transfer #8460
  - Fix a panic issue that occurs when TiKV runs very slowly during Raft membership change #8497
  - Fix the deadlock issue that occurs between the PD client thread and other threads when calling PD sync requests #8612
  - Upgrade jemalloc to v5.2.1 to address the issue of memory allocation in huge page #8463
  - Fix the issue that the unified thread pool hangs for long-running queries #8427

- PD

  - Add the `initial-cluster-token` configuration to prevent different clusters from communicating with each other during bootstrap #2922
  - Fix the unit of store limit rate when the mode is `auto` #2826
  - Fix the issue that some schedulers persist configuration without solving errors #2818
  - Fix the empty HTTP response in scheduler #2871 #2874

- TiFlash

  - Fix the issue that after renaming the primary key column in previous versions, TiFlash might not start after upgrading to v4.0.4/v4.0.5
  - Fix the exceptions that occur after modifying the column's `nullable` attribute
  - Fix the crash caused by computing a table's replication status
  - Fix the issue that TiFlash is not available for data reads after users applied unsupported DDL operations
  - Fix the exceptions caused by unsupported collations which are treated as `utf8mb4_bin`
  - Fix the issue that the QPS panel for the TiFlash coprocessor executor always displays `0` in Grafana
  - Fix the wrong result of the `FROM_UNIXTIME` function when input is `NULL`

- Tools

  - TiCDC

    * Fix the issue that TiCDC leaks memory in some cases #942
    * Fix the issue that TiCDC might panic in Kafka sink #912
    * Fix the issue that CommitTs or ResolvedTs (CRTs) might be less than `resolvedTs` in puller #927
    * Fix the issue that `changefeed` might be blocked by MySQL driver #936
    * Fix the incorrect Resolved Ts interval of TiCDC #8573

  - Backup & Restore (BR)

    * Fix a panic that might occur during checksum #479
    * Fix a panic that might occur after the change of PD Leader #496

  - Dumpling

    * Fix the issue that the `NULL` value for the binary type is not handled properly #137

  - TiDB Lightning

    * Fix the issue that all failed operations of writes and ingests are mistakenly displayed as successful #381
    * Fix the issue that some checkpoint updates might not be written to the database before TiDB Lightning exits #386

16.15.12 TiDB 4.0.5 Release Notes

Release date: August 31, 2020

TiDB version: 4.0.5

16.15.12.1 Compatibility Changes

- TiDB

- Change `drop partition` and `truncate partition`'s job arguments to support the ID array of multiple partitions #18930
- Add the delete-only state for checking `add partition` replicas #18865

16.15.12.2 New Features

- TiKV
  - Define error code for errors #8387
- TiFlash
  - Support the unified log format with TiDB
- Tools
  - TiCDC
    * Support Kafka SSL connection #764
    * Support outputting the old value #708
    * Add the column flags #796
    * Support outputting the DDL statements and table schema of the previous version #799

16.15.12.3 Improvements

- TiDB
  - Optimize the performance of `DecodePlan` for big union queries #18941
  - Reduce the number of GC lock scans when the `Region cache miss` error occurs #18876
  - Ease the impact of statistical feedback on cluster performance #18772
  - Support canceling operations before the RPC response is returned #18580
  - Add the HTTP API to generate the TiDB metric profile #18531
  - Support scattering partitioned tables #17863
  - Add detailed memory usage of each instance in Grafana #18679
  - Show the detailed runtime information of the `BatchPointGet` operator in the result of `EXPLAIN` #18892
  - Show the detailed runtime information of the `PointGet` operator in the result of `EXPLAIN` #18817
  - Warn the potential deadlock for `Consume` in `remove()` #18395
  - Refine the behaviors of `StrToInt` and `StrToFloat` and support converting JSON to the `date`, `time`, and `timestamp` types #18159
  - Support limiting the memory usage of the `TableReader` operator #18392
  - Avoid too many times of backoff when retrying the `batch cop` request #18999

  - Improve compatibility for `ALTER TABLE` algorithms #19270
  - Make the single partitioned table support `IndexJoin` on the inner side #19151
  - Support searching the log file even when the log includes invalid lines #18579

- PD

  - Support scattering Regions in stores with special engines (such as TiFlash) #2706
  - Support the Region HTTP API to prioritize Region scheduling of a given key range #2687
  - Improve the leader distribution after Region scattering #2684
  - Add more tests and logs for the TSO request #2678
  - Avoid invalid cache updates after the leader of a Region has changed #2672
  - Add an option to allow `store.GetLimit` to return the tombstone stores #2743
  - Support synchronizing the Region leader change between the PD leader and followers #2795
  - Add commands for querying the GC safepoint service #2797
  - Replace the `region.Clone` call in filters to improve performance #2801
  - Add an option to disable updating Region flow cache to improve the performance of the large cluster #2848

- TiFlash

  - Add more Grafana panels to display metrics of CPU, I/O, RAM usages and metrics of the storage engine
  - Reduce I/O operations by optimizing the processing logic of Raft logs
  - Accelerate Region scheduling for the blocked `add partition` DDL statement
  - Optimize compactions of delta data in DeltaTree to reduce read and write amplification
  - Optimize the performance of applying Region snapshots by preprocessing the snapshots using multiple threads
  - Optimize the number of opening file descriptors when the read load of TiFlash is low to reduce system resource consumption
  - Optimize the number of unnecessary small files created when TiFlash restarts
  - Support encryption at rest for data storage
  - Support TLS for data transfer

- Tools

  - TiCDC

    * Lower the frequency of getting TSO #801

  - Backup & Restore (BR)

    * Optimize some logs #428

  - Dumpling

    * Release FTWRL after connections are created to reduce the lock time for MySQL #121

  - TiDB Lightning

    * Optimize some logs #352

16.15.12.4 Bug Fixes

- TiDB

  - Fix the `should ensure all columns have the same length` error that occurs because the `ErrTruncate/Overflow` error is incorrectly handled in the `builtinCastRealAsDecimalSig` function #18967
  - Fix the issue that the `pre_split_regions` table option does not work in the partitioned table #18837
  - Fix the issue that might cause a large transaction to be terminated prematurely #18813
  - Fix the issue that using the `collation` functions get wrong query results #18735
  - Fix the bug that the `getAutoIncrementID()` function does not consider the `tidb_snapshot` session variable, which might cause the dumper tool to fail with the `table not exist` error #18692
  - Fix the `unknown column error` for SQL statement like `select a from t having t.a` #18434
  - Fix the panic issue that writing the 64-bit unsigned type into the hash partitioned table causes overflow and gets an unexpected negative number when the partition key is the integer type #18186
  - Fix the wrong behavior of the `char` function #18122
  - Fix the issue that the `ADMIN REPAIR TABLE` statement cannot parse integer in the expressions on the range partition #17988
  - Fix the wrong behavior of the `SET CHARSET` statement #17289
  - Fix the bug caused by the wrong collation setting which leads to the wrong result of the `collation` function #17231
  - Fix the issue that `STR_TO_DATE`'s handling of the format tokens'%r', '%h' is inconsistent with that of MySQL #18727
  - Fix issues that the TiDB version information is inconsistent with that of PD/TiKV in the `cluster_info` table #18413
  - Fix the existent checks for pessimistic transactions #19004
  - Fix the issue that executing `union select for update` might cause concurrent race #19006
  - Fix the wrong query result when `apply` has a child of the `PointGet` operator #19046
  - Fix the incorrect result that occurs when `IndexLookUp` is in the inner side of the `Apply` operator #19496
  - Fix the incorrect result of `anti-semi-join` queries #19472
  - Fix the incorrect result caused by the mistaken usage of `BatchPointGet` #19456

  - Fix the incorrect result that occurs when `UnionScan` is in the inner side of the `Apply` operator #19496
  - Fix the panic caused by using the `EXECUTE` statement to print an expensive query log #17419
  - Fix the index join error when the join key is `ENUM` or `SET` #19235
  - Fix the issue that the query range cannot be built when the `NULL` value exists on the index column #19358
  - Fix the data race issue caused by updating the global configuration #17964
  - Fix the panic issue occurs when modifying the character set in an uppercase schema #19286
  - Fix an unexpected error caused by changing the temporary directory during the disk spill action #18970
  - Fix the wrong hash key for the decimal type #19131
  - Fix the issue that the `PointGet` and `BatchPointGet` operators do not consider the partition selection syntax and get incorrect results #19141
  - Fix the incorrect results when using the `Apply` operator together with the `UnionScan` operator #19104
  - Fix the bug that causes the indexed virtual generated column to return wrong value #17989
  - Add the lock for runtime statistics to fix a panic caused by concurrent execution #18983

- TiKV

  - Speed up leader election when Hibernate Region is enabled #8292
  - Fix the memory leak issue during scheduling #8357
  - Add the `hibernate-timeout` configuration item to prevent the leader from becoming hibernate too fast #8208

- PD

  - Fix the bug that the TSO request might fail at the time of leader change #2666
  - Fix the issue that sometimes Region replicas cannot be scheduled to the optimal state when placement rules are enabled #2720
  - Fix the issue that `Balance Leader` does not work when placement rules are enabled #2726
  - Fix the issue that unhealthy stores are not filtered from store load statistics #2805

- TiFlash

  - Fix the issue that TiFlash cannot start normally after upgrading from an earlier version if the name of the database or table contains special characters
  - Fix the issue that the TiFlash process cannot exit if any exceptions are thrown during initialization

- Tools

- Backup & Restore (BR)
  * Fix the issue of duplicated calculation of total KV and total bytes in the backup summary log #472
  * Fix the issue that the import mode does not work in the first 5 minutes after switching to this mode #473
- Dumpling
  * Fix the issue that FTWRL lock is not released in time #128
- TiCDC
  * Fix the issue that the failed `changefeed` cannot be removed #782
  * Fix invalid `delete` events by selecting one unique index as the handle index #787
  * Fix the bug that GC safepoint is forwarded beyond the checkpoint of stopped `changefeed` #797
  * Fix the bug that the network I/O waiting blocks tasks to exit #825
  * Fix the bug that some unnecessary data might be mistakenly replicated to the downstream #743
- TiDB Lightning
  * Fix the syntax error on empty binary/hex literals when using TiDB backend #357

16.15.13 TiDB 4.0.4 Release Notes

Release date: July 31, 2020

TiDB version: 4.0.4

16.15.13.1 Bug Fixes

- TiDB
  - Fix the issue of getting stuck when querying `information_schema.columns` #18849
  - Fix the errors that occur when the `PointGet` and `BatchPointGet` operators encounter `in null` #18848
  - Fix the wrong result of `BatchPointGet` #18815
  - Fix the issue of incorrect query result that occurs when the `HashJoin` operator encounters the `set` or `enum` type #18859

16.15.14 TiDB 4.0.3 Release Notes

Release date: July 24, 2020

TiDB version: 4.0.3

16.15.14.1 New Features

- TiDB Dashboard
  - Display detailed TiDB Dashboard version information #679
  - Show browser compatibility notice for unsupported browsers or outdated browsers #654
  - Support searching in the **SQL Statements** page #658
- TiFlash
  - Implement file encryption in TiFlash proxy
- Tools
  - Backup & Restore (BR)
    - Support compressing backup files using zstd, lz4 or snappy #404
  - TiCDC
    - Support configuring `kafka-client-id` in MQ sink-uri #706
    - Support updating `changefeed` configuration offline #699
    - Support setting customized `changefeed` name #727
    - Support TLS and MySQL SSL connection #347
    - Support outputting changes in the Avro format #753
    - Support the Apache Pulsar sink #751
  - Dumpling
    - Support the specialized CSV separator and delimiter #116
    - Support specifying the format of the output file name #122

16.15.14.2 Improvements

- TiDB
  - Add the `tidb_log_desensitization` global variable to control whether to do desensitization when logging SQL queries #18581
  - Enable `tidb_allow_batch_cop` by default #18552
  - Speed up canceling a query #18505
  - Add a header for the `tidb_decode_plan` result #18501
  - Make the configuration checker compatible with earlier versions of the configuration file #18046
  - Enable collecting the execution information by default #18518
  - Add the `tiflash_tables` and `tiflash_segments` system tables #18536
  - Move `AUTO RANDOM` out of experimental features and announce its general availability. The improvements and compatibility changes are as follows:

    * Deprecate `experimental.allow-auto-random` in the configuration file. No matter how this item is configured, you can always define the `AUTO RANDOM` feature on columns. #18613 #18623
    * Add the `tidb_allow_auto_random_explicit_insert` session variable to control the explicit writes on `AUTO RANDOM` columns. The default value is `false`. This is to avoid the unexpected `AUTO_RANDOM_BASE` update caused by explicit writes on columns. #18508
    * Allow defining `AUTO_RANDOM` only on `BIGINT` and `UNSIGNED BIGINT` columns and restrict the maximum number of shard bits to `15`, which avoids the allocatable space being consumed too quickly #18538
    * Do not trigger the `AUTO_RANDOM_BASE` update when defining the `AUTO_RANDOM` ↪ attribute on the `BIGINT` column and inserting the negative value into the primary key #17987
    * Use the highest bit of an integer for ID allocation when defining the `AUTO_RANDOM` attribute on `UNSIGNED BIGINT` columns, which gets more allocable space #18404
    * Support updating the `AUTO_RANDOM` attribute in the result of `SHOW CREATE` ↪ `TABLE` #18316

- TiKV

    - Introduce the new `backup.num-threads` configuration to control the size of the backup thread pool #8199
    - Do not send store heartbeats when receiving snapshots #8136
    - Support dynamically changing the shared block cache's capacity #8232

- PD

    - Support the JSON formatted log #2565

- TiDB Dashboard

    - Improve the Key Visualizer bucket merge for cold logical ranges #674
    - Rename the configuration item of `disable-telemetry` to `enable-telemetry` for consistency #684
    - Show the progress bar when switching pages #661
    - Ensure that the slow log search now follows the same behavior as log search when there are space separators #682

- TiFlash

    - Change the unit of the **DDL Jobs** panel in Grafana to `operations per minute`
    - Add a new dashboard in Grafana to show more metrics about **TiFlash-Proxy**
    - Reduce IOPS in TiFlash proxy

- Tools

- TiCDC
  - Replace table ID with table name in metrics #695
- Backup & Restore (BR)
  - Support outputting JSON logs #336
  - Support enabling pprof during runtime #372
  - Speed up DDL executions by sending DDL concurrently during restore #377
- TiDB Lightning
  - Deprecate `black-white-list` with a newer and easier-to-understand filter format #332

16.15.14.3 Bug Fixes

- TiDB
  - Return an error instead of an empty set for `IndexHashJoin` when an error occurs during execution #18586
  - Fix the recurring panic when gRPC transportReader is broken #18562
  - Fix the issue that Green GC does not scan locks on offline stores which might cause data incompleteness #18550
  - Forbid processing a non-read-only statement using TiFlash engine #18534
  - Return the actual error message when a query connection panics #18500
  - Fix the issue that the `ADMIN REPAIR TABLE` execution fails to reload the table metadata on the TiDB node #18323
  - Fix the data inconsistency issue occurred because the lock of a written and deleted primary key in one transaction is resolved by another transaction #18291
  - Make spilling disk work well #18288
  - Fix the error reported when the `REPLACE INTO` statement works on the table that contains generated columns #17907
  - Return the OOM error when the `IndexHashJoin` and `IndexMergeJoin` workers panic #18527
  - Fix the bug that the execution of `Index Join` might return wrong results in special cases when the index used by `Index Join` contains the integer primary key #18565
  - Fix the issue that when the new collation is enabled on the cluster, the data updated on columns with the new collation in a transaction cannot be read through the unique index #18703
- TiKV
  - Fix the issue that reads might get stale data during merging #8113
  - Fix the issue that collation does not work on the `min`/`max` function when aggregation is pushed down to TiKV #8108

- PD
  - Fix the issue that creating TSO stream might be blocked for a while if the server crashes #2648
  - Fix the issue that `getSchedulers` might cause a data race #2638
  - Fix the issue that deleting the scheduler might cause deadlocks #2637
  - Fix the bug that placement rules are not considered when `balance-leader-scheduler` is enabled #2636
  - Fix the issue that sometimes service `safepoint` cannot be set properly, which might make BR and dumpling fail #2635
  - Fix the issue that the target store in `hot region scheduler` is incorrectly selected #2627
  - Fix the issue that the TSO request might take too long when PD leader is switched #2622
  - Fix the issue of stale scheduler after leader change #2608
  - Fix the issue that sometimes replicas of a Region cannot be adjusted to the best location when placement rules are enabled #2605
  - Fix the issue that the deployment path of the store is not updated according to the change of deployment directory #2600
  - Prevent `store limit` from changing to zero #2588
- TiDB Dashboard
  - Fix the TiDB connection error when TiDB is scaled out #689
  - Fix the issue that TiFlash instances are not displayed in the log searching page #680
  - Fix the issue of metric selection reset after refreshing the overview page #663
  - Fix a connection issue in some TLS scenarios #660
  - Fix the issue that the language dropdown box is not displayed correctly in some cases #677
- TiFlash
  - Fix the issue that TiFlash crashes after renaming the primary key column
  - Fix the issue that concurrent `Learner Read` and `Remove Region` might cause deadlocks
- Tools
  - TiCDC
    - Fix the issue that TiCDC leaks memory in some cases #704
    - Fix the issue that unquoted table name causes the SQL syntax error #676
    - Fix the issue that the processor does not fully exit after `p.stop` is called #693
  - Backup & Restore (BR)
    - Fix the issue that the backup time might be negative #405

- Dumpling
  - * Fix the issue that Dumpling omits the `NULL` value when `--r` is specified #119
  - * Fix the bug that flushing tables might not work for tables to dump #117
- TiDB Lightning
  - * Fix the issue that `--log-file` does not take effect #345
- TiDB Binlog
  - * Fix the issue that when TiDB Binlog replicates data to the downstream with TLS enabled, Drainer cannot be started which occurs because TLS is not enabled on the database driver used to update the checkpoint #988

16.15.15 TiDB 4.0.2 Release Notes

Release date: July 1, 2020

TiDB version: 4.0.2

16.15.15.1 Compatibility Changes

- TiDB
  - Remove sensitive information in the slow query log and the statement summary table #18130
  - Forbid negative value in the sequence cache #18103
  - Remove tombstone TiKV and TiFlash stores from the `CLUSTER_INFO` table #17953
  - Change the diagnostic rule from `current-load` to `node-check` #17660
- PD
  - Persist `store-limit` and remove `store-balance-rate` #2557

16.15.15.2 New Change

- By default, TiDB and TiDB Dashboard share usage details with PingCAP to help understand how to improve the product #18180. For details about what is shared and how to disable the sharing, see Telemetry.

16.15.15.3 New Features

- TiDB
  - Support the `MEMORY_QUOTA()` hint in `INSERT` statements #18101
  - Support authentication based on the `SAN` field of TLS certificate #17698
  - Support collation for the `REGEXP()` function #17581
  - Support the `sql_select_limit` session and global variable #17604
  - Support splitting the Region for the newly added partition by default #17665
  - Support pushing the `IF()`/`BITXOR()`/`BITNEG()`/`JSON_LENGTH()` functions to the TiFlash Coprocessor #17651 #17592
  - Support a new aggregate function `APPROX_COUNT_DISTINCT()` to calculate the approximate result of `COUNT(DISTINCT)` #18120
  - Support collation in TiFlash and pushing collation-related functions to TiFlash #17705
  - Add the `STATUS_ADDRESS` column in the `INFORMATION_SCHEMA.INSPECTION_RESULT` table to indicate the status address of servers #17695
  - Add the `SOURCE` column in the `MYSQL.BIND_INFO` table to indicate the how the bindings are created #17587
  - Add the `PLAN_IN_CACHE` and `PLAN_CACHE_HITS` columns in the `PERFORMANCE_SCHEMA.EVENTS_STATEMENTS_SUMMARY_BY_DIGEST` table to indicate the plan cache usage of SQL statements #17493
  - Add the `enable-collect-execution-info` configuration item and the `tidb_enable_collect_execution_info` session variable to control whether to collect execution information of each operator and record the information in the slow query log #18073 #18072
  - Add the `tidb_slow_log_masking` global variable to control whether to desensitize the queries in slow query log #17694
  - Add a diagnostic rule in the `INFORMATION_SCHEMA.INSPECTION_RESULT` table for the `storage.block-cache.capacity` TiKV configuration item #17671
  - Add the `BACKUP` and `RESTORE` SQL statements to back up and restore data #15274
- TiKV
  - Support the `encryption-meta` command in TiKV Control #8103
  - Add a perf context metric for `RocksDB::WriteImpl` #7991
- PD
  - Support the operator to fail immediately when trying to remove a leader peer #2551
  - Set a suitable default store limit for TiFlash stores #2559
- TiFlash
  - Support new aggregation function `APPROX_COUNT_DISTINCT` in Coprocessor

  - Enable the `rough set filter` feature by default
  - Enable TiFlash to run on the ARM architecture
  - Support pushing down the `JSON_LENGTH` function in Coprocessor

- Tools

  - TiCDC

    * Support migrating sub-tasks to new `captures` #665
    * Add a `cli` command to delete the TiCDC GC TTL #652
    * Support canal protocol in MQ sink #649

16.15.15.4 Improvements

- TiDB

  - Reduce the query latency caused by the Golang memory allocation when CM-Sketch consumes too much memory #17545
  - Reduce the QPS recovery duration of a cluster when a TiKV server is in the failure recovery process #17681
  - Support pushing aggregate functions to TiKV/TiFlash Coprocessor on partition tables #17655
  - Improve the accuracy of row count estimation for index equal conditions #17611

- TiKV

  - Improve the PD client panic log #8093
  - Add back the `process_cpu_seconds_total` and `process_start_time_seconds` monitoring metrics #8029

- TiFlash

  - Improve backward compatibility when upgrading from an older version #786
  - Reduce memory consumption of delta index #787
  - Use the more efficient update algorithm for delta index #794

- Tools

  - Backup & Restore (BR)

    * Improve the performance by pipelining the restore process #266

16.15.15.5 Bug Fixes

- TiDB
  - Fix the issue of incorrect execution plan obtained from the plan cache after `tidb_isolation_read_engines` is changed #17570
  - Fix the occasional runtime error that occurs when executing the `EXPLAIN FOR CONNECTION` statement #18124
  - Fix the incorrect result of the `last_plan_from_cache` session variable in some cases #18111
  - Fix the runtime error that occurs when executing the `UNIX_TIMESTAMP()` function from the plan cache #18002 #17673
  - Fix the runtime error when the child of `HashJoin` executor returns the `NULL` column #17937
  - Fix the runtime error caused by concurrently executing the `DROP DATABASE` statement and other DDL statements in the same database #17659
  - Fix the incorrect result of the `COERCIBILITY()` function on user variables #17890
  - Fix the issue that the `IndexMergeJoin` executor occasionally gets stuck #18091
  - Fix the hang issue of the `IndexMergeJoin` executor when out of memory quota and query cancelling is triggered #17654
  - Fix the excessive counting memory usage of the `Insert` and `Replace` executors #18062
  - Fix the issue that the data replication to TiFlash storage is stopped when `DROP DATABASE` and `DROP TABLE` are executed concurrently in the same database #17901
  - Fix the `BACKUP/RESTORE` failure between TiDB and the object storage service #17844
  - Fix the incorrect error message of privilege check failure when access is denied #17724
  - Discard the query feedbacks generated from the `DELETE/UPDATE` statement #17843
  - Forbid altering `AUTO_RANDOM_BASE` for a table without `AUTO_RANDOM` property #17828
  - Fix the issue that the `AUTO_RANDOM` column is allocated wrong results when the table is moved between databases by `ALTER TABLE ... RENAME` #18243
  - Fix the issue that some system tables cannot be accessed when setting the value of `tidb_isolation_read_engines` without `tidb` #17719
  - Fix the inaccurate result of JSON comparison on large integers and float values #17717
  - Fix the incorrect decimal property for the result of the `COUNT()` function #17704
  - Fix the incorrect result of the `HEX()` function when the type of input is the binary string #17620
  - Fix the issue that an empty result is returned when querying the `INFORMATION_SCHEMA.INSPECTION_SUMMARY` table without filter condition #17697

  - Fix the issue that the hashed password used by the `ALTER USER` statement to update user information is unexpected #17646
  - Support collation for `ENUM` and `SET` values #17701
  - Fix the issue that the timeout mechanism for pre-splitting Regions does not work when creating a table #17619
  - Fix the issue that the schema is unexpectedly updated when a DDL job is retried, which might break the atomicity of DDL jobs #17608
  - Fix the incorrect result of the `FIELD()` function when the argument contains the column #17562
  - Fix the issue that the `max_execution_time` hint does not work occasionally #17536
  - Fix the issue that the concurrency information is redundantly printed in the result of `EXPLAIN ANALYZE` #17350
  - Fix the incompatible behavior of `%h` on the `STR_TO_DATE` function #17498
  - Fix the issue that the follower/learner keeps retrying when `tidb_replica_read` is set to `follower` and there is a network partition between the leader and the follower/learner #17443
  - Fix the issue that TiDB sends too many pings to PD follower in some cases #17947
  - Fix the issue that the range partition table of older versions cannot be loaded in TiDB v4.0 #17983
  - Fix the SQL statement timeout issue when multiple Region requests fail at the same time by assigning different `Backoffer` for each Region #17585
  - Fix the MySQL incompatible behavior when parsing `DateTime` delimiters #17501
  - Fix the issue that TiKV requests are occasionally sent to the TiFlash server #18105
  - Fix the data inconsistency issue occurred because the lock of a written and deleted primary key in one transaction is resolved by another transaction #18250

- TiKV

  - Fix a memory safety issue for the status server #8101
  - Fix the issue of lost precision in JSON numeric comparison #8087
  - Fix the wrong query slow log #8050
  - Fix the issue that a peer cannot be removed when its store is isolated during multiple merge processes #8048
  - Fix the issue that `tikv-ctl recover-mvcc` does not remove invalid pessimistic locks #8047
  - Fix the issue that some Titan histogram metrics are missing #7997
  - Fix the issue that TiKV returns `duplicated error` to TiCDC #7887

- PD

  - Check the correctness of the `pd-server.dashboard-address` configuration item #2517

  - Fix the panic issue of PD when setting `store-limit-mode` to `auto` #2544
  - Fix the issue that hotspots cannot be identified in some cases #2463
  - Fix the issue that placement rules prevent the store from changing to `tombstone` in some cases #2546
  - Fix the panic issue of PD when upgrading from earlier versions in some cases #2564

- TiFlash

  - Fix the issue that the proxy might panic when the `region not found` error occurs
  - Fix the issue that the I/O exception thrown in `drop table` might lead to synchronization failure of TiFlash schema

16.15.16 TiDB 4.0.1 Release Notes

Release date: June 12, 2020

TiDB version: 4.0.1

16.15.16.1 New Features

- TiKV

  - Add the `--advertise-status-addr` start flag to specify the status address to advertise #8046

- PD

  - Support the internal proxy for the built-in TiDB Dashboard #2511
  - Support setting a custom timeout for PD client #2509

- TiFlash

  - Support the TiDB new collation framework
  - Support pushing down the `If`/`BitAnd`/`BitOr`/`BitXor`/`BitNot`/`Json_length` functions to TiFlash
  - Support the Resolve Lock logic for large transactions in TiFlash

- Tools

  - Backup & Restore (BR)

    * Add a version check when starting BR to avoid the issue that BR and the TiDB cluster are incompatible #311

16.15.16.2 Bug Fixes

- TiKV
  - Fix the issue that the `use-unified-pool` configuration in the startup log is incorrectly printed #7946
  - Fix the issue that the tikv-ctl does not support relative path #7963
  - Fix the bug that the monitoring metric of Point Selects is inaccurate #8033
  - Fix the issue that a peer might not be destroyed after the network isolation disappears #8006
  - Fix the issue that a request for read index might get outdated commit index #8043
  - Improve the reliability of backup and restore with S3 and GCS storages #7917
- PD
  - Prevent misconfiguration of Placement Rules in some situations #2516
  - Fix the issue that deleting the Placement Rule might cause panic #2515
  - Fix a bug that the store information cannot be obtained when the store's used size is zero #2474
- TiFlash
  - Fix the issue that default value of the `bit` type column in TiFlash is incorrectly parsed
  - Fix the miscalculation of `1970-01-01 00:00:00 UTC` in some timezones in TiFlash

16.15.17 TiDB 4.0 GA Release Notes

Release date: May 28, 2020

TiDB version: 4.0.0

16.15.17.1 Compatibility Changes

- TiDB
  - Optimize the error message of the large-sized transactions for easier troubleshooting #17219
- TiCDC
  - Optimize the structure of the `Changefeed` configuration file to improve usability #588
  - Add the `ignore-txn-start-ts` configuration item, and change the condition from `commit_ts` to `start_ts` during transactions filtering #589

16.15.17.2 Important Bug Fixes

- TiKV
  - Fix the `DefaultNotFound` error that occurs when backing up using Backup & Restore (BR) #7937
  - Fix system panics caused by the out-of-order `ReadIndex` packages #7930
  - Fix system panics caused by incorrectly removing snapshot files after TiKV is restarted #7927
- TiFlash
  - Fix the possible data loss issue that occurs when the system panics because of incorrect processing logic of `Raft Admin Command`

16.15.17.3 New Features

- TiDB
  - Add the `committer-concurrency` configuration item to control the number of `goroutines` in the retry-commit phase #16849
  - Support the `show table partition regions` syntax #17294
  - Add the `tmp-storage-quota` configuration item to limit the temporary disk space used by the TiDB server #15700
  - Support checking whether the partitioned table uses a unique prefix index when creating and changing tables #17213
  - Support the `insert/replace into tbl_name partition(partition_name_list` ↪) statement #17313
  - Support checking the value of `collations` when using the `Distinct` function #17240
  - Support the `is null` filter condition during the Hash partition pruning #17310
  - Support `admin check index`, `admin cleanup index`, and `admin recover` ↪ `index` in partitioned tables #17392 #17405 #17317
  - Support range partition pruning for the `in` expressions #17320
- TiFlash
  - Support filtering out the data corresponding to the qualified `TSO` through the `min commit ts` value of the `Lock CF` when the Learner reads the data
  - Add the feature that the system explicitly reports an error to avoid incorrect calculation results when the value of `TIMESTAMP` type is less than `1970-01-01` ↪ `00:00:00`
  - Support using flags in regular expressions when searching logs
- TiKV
  - Support collation rules of `ascii_bin` and `latin1_bin` encoding #7919

- PD
  - Support specifying the reverse proxy resource prefix for built-in TiDB Dashboard #2457
  - Support returning the `pending peer` and `down peer` information in interfaces of the PD client Region #2443
  - Add monitoring items such as `Direction of hotspot move leader`, `Direction of hotspot move peer`, and `Hot cache read entry number` #2448
- Tools
  - Backup & Restore (BR)
    - Support the backup and restore of `Sequence` and `View` #242
  - TiCDC
    - Support checking the validity of `Sink URI` when creating `Changefeed` #561
    - Support checking whether the PD and TiKV versions meet the system requirements during system startup #570
    - Support scheduling multiple tables in the same scheduling task generation cycle #572
    - Add information about node roles in HTTP API #591

16.15.17.4 Bug Fixes

- TiDB
  - Fix the issue of unexpected timeouts when sending and receiving messages by disabling TiDB to send batch commands to TiFlash #17307
  - Fix the issue of incorrectly distinguishing signed and unsigned integers during partition pruning, which improves performance #17230
  - Fix the issue of upgrade failure from v3.1.1 to v4.0 because of the incompatible `mysql.user` table #17300
  - Fix the issue of incorrect selection of the partition in the `update` statement #17305
  - Fix system panics when receiving an unknown error message from TiKV #17380
  - Fix system panics caused by incorrect processing logic when creating the table that is `key` partitioned #17242
  - Fix the issue that the wrong `Index Merge Join` plan is selected because of incorrect optimizer processing logic #17365
  - Fix the issue of inaccurate `duration` monitoring metric of the `SELECT` statement in Grafana #16561
  - Fix the issue that the GC worker is blocked when the system error occurs #16915
  - Fix the issue that the `UNIQUE` constraint on a boolean column results in an incorrect result in a comparison #17306
  - Fix system panics caused by incorrect processing logic when `tidb_opt_agg_push_down` is enabled and the aggregation function pushes down the partitioned table #17328

  - Fix the issue of accessing failed TiKV nodes in some cases #17342
  - Fix the issue that the `isolation-read` configuration item in `tidb.toml` does not take effect #17322
  - Fix the issue of incorrect order of output results due to incorrect processing logic when `hint` is used to enforce the stream aggregation #17347
  - Fix the behavior that `insert` processes DIV under different `SQL_MODE` #17314

- TiFlash

  - Fix the issue that the matching behavior of regular expressions in the search log feature is inconsistent with other components
  - Fix the issue of excessive restart time when nodes write large amounts of data by disabling the delay processing optimization of `Raft Compact Log Command` by default
  - Fix the issue that the system fails to start because TiDB incorrectly processes the `DROP DATABASE` statement in some scenarios
  - Fix the issue that the method of collecting CPU information in `Server_info` is different from that in other components
  - Fix the issue that the error `Too Many Pings` is reported when the `Query` statement is executed if `batch coprocessor` is enabled
  - Fix the issue that Dashboard fails to display the correct `deploy path` information because TiFlash does not report the related information

- TiKV

  - Fix the `DefaultNotFound` error that occurs when backing up using BR #7937
  - Fix system panics caused by out-of-order `ReadIndex` packets #7930
  - Fix the issue that an unexpected error is returned because the read request callback function is not called #7921
  - Fix system panics caused by incorrectly removing snapshot files when TiKV is restarted #7927
  - Fix the issue that the `master key` cannot be rotated due to incorrect processing logic in storage encryption #7898
  - Fix the issue that the received `lock cf` file of the snapshot is not encrypted when the storage encryption is enabled #7922

- PD

  - Fix the 404 error when deleting `evict-leader-scheduler` or `grant-leader-scheduler` using pd-ctl #2446
  - Fix the issue that the `presplit` feature might not work properly when the TiFlash replica exists #2447

- Tools

  - Backup & Restore (BR)

    * Fix the issue that the data restoration fails due to network issues when BR restores data from cloud storage #298
  - TiCDC
    * Fix system panics caused by data race #565 #566
    * Fix resource leaks or system blockages caused by incorrect processing logic #574 #586
    * Fix the issue that the command line gets stuck because CLI cannot connect to PD #579

16.15.18 TiDB 4.0 RC.2 Release Notes

Release date: May 15, 2020

TiDB version: 4.0.0-rc.2

16.15.18.1 Compatibility Changes

- TiDB
  - Remove the size limit for a single transaction (100 MB) when TiDB Binlog is enabled. Now the size limit for a transaction is 10 GB. However, if TiDB Binlog is enabled and the downstream is Kafka, configure the `txn-total-size-limit` parameter according to the message size limit of 1 GB in Kafka #16941
  - Change the behavior from querying the default time range to returning an error and requesting a specified time range if the time range is not specified when querying the `CLUSTER_LOG` table #17003
  - If the unsupported `sub-partition` or `linear hash` option is specified when creating the partitioned table using the `CREATE TABLE` statement, the normal table is created rather than the partitioned table with the options ignored #17197
- TiKV
  - Move the encryption-related configuration to the security-related configuration, which means changing `[encryption]` in the TiKV configuration file to `[security.encryption]` #7810
- Tools
  - TiDB Lightning
    * Change the default SQL mode to `ONLY_FULL_GROUP_BY,NO_AUTO_CREATE_USER` when importing data to improve compatibility #316
    * Disallow accessing the PD or TiKV port in the tidb-backend mode #312
    * Print the log information to the tmp file by default, and print the path of the tmp file when TiDB Lightning is started #313

16.15.18.2 Important Bug Fixes

- TiDB
  - Fix the issue that the wrong partition is chosen when the `WHERE` clause has only one equivalent condition #17054
  - Fix the issue of wrong results caused by building the incorrect Index range when the `WHERE` clause only contains the string column #16660
  - Fix the panic issue that occurs when executing the `PointGet` query in the transaction after the `DELETE` operation #16991
  - Fix the issue that the GC worker might encounter the deadlock when an error occurs #16915
  - Avoid the unnecessary RegionMiss retry when the TiKV response is slow but not down #16956
  - Change the log level in the client in the handshake phase of the MySQL protocol to `DEBUG` to solve the problem that interferes with log output #16881
  - Fix the issue that the Region is not pre-split according to the `PRE_SPLIT_REGIONS` information defined by the table after the `TRUNCATE` operation #16776
  - Fix the issue of soaring goroutine caused by retry when TiKV is unavailable during the second phase of the two-phase commit #16876
  - Fix the panic issue of statement execution when some expressions cannot be pushed down #16869
  - Fix the wrong execution result of the IndexMerge operation on the partitioned table #17124
  - Fix the performance reduction of `wide_table` caused by the mutex contention of Memory Trackers #17234
- TiFlash
  - Fix the issue that the system cannot start normally after the upgrade if the name of the database or table contains special characters

16.15.18.3 New Features

- TiDB
  - Add support for the `BACKUP` and `RESTORE` commands to back up and restore data #16960
  - Support pre-checking the data volume in a single Region before commit and pre-splitting the Region when the data volume exceeds the threshold #16959
  - Add the new `LAST_PLAN_FROM_CACHE` variable with a `Session` scope to indicate whether the last executed statement hits the plan cache #16830
  - Support recording the `Cop_time` information in slow log and the `SLOW_LOG` table #16904

  - Add in Grafana more metrics that monitor the memory status of Go Runtime #16928
  - Support outputting the `forUpdateTS` and `Read Consistency` isolation level information in General Log #16946
  - Support collapsing duplicate requests of resolving locks in TiKV Region #16925
  - Support using the `SET CONFIG` statement to modify the configuration of PD/TiKV nodes #16853
  - Support the `auto_random` option in the `CREATE TABLE` statement #16813
  - Allocate TaskID for the DistSQL request to help TiKV better schedule and process requests #17155
  - Support displaying the version information of the TiDB server after logging into the MySQL client #17187
  - Support the `ORDER BY` clause in the `GROUP_CONCAT` function #16990
  - Support displaying the `Plan_from_cache` information in slow log to indicate whether the statement hits plan cache #17121
  - Add the feature that TiDB Dashboard can display the capacity information of TiFlash multi-disk deployment
  - Add the feature of querying the TiFlash log using SQL statements in Dashboard

- TiKV

  - Support encryption debugging for tikv-ctl, so that tikv-ctl can be used to operate and manage the cluster when the encryption storage is enabled #7698
  - Support encrypting the lock column family in snapshots #7712
  - Use the heatmap in the Grafana dashboard for Raftstore latency summary to better diagnose the jitter issue #7717
  - Support setting the upper limit for the size of the gRPC message #7824
  - Add in Grafana dashboard the encryption-related monitoring metrics #7827
  - Support Application-Layer Protocol Negotiation (ALPN) #7825
  - Add more statistics about Titan #7818
  - Support using the task ID provided by the client as the identifier in the unified read pool to avoid that the priority of a task is lowered by another task in the same transaction #7814
  - Improve the performance of the `batch insert` request #7718

- PD

  - Eliminate the speed limit of removing peers when making a node offline #2372

- TiFlash

  - Change the name of the Count graph of **Read Index** in Grafana to **Ops**
  - Optimize the data for opening file descriptors when the system load is low to reduce system resource consumption
  - Add the capacity-related configuration parameter to limit the the data storage capacity

- Tools
  - TiDB Lightning
    * Add the `fetch-mode` sub-command in tidb-lightning-ctl to print the TiKV cluster mode #287
  - TiCDC
    * Support managing the replication task by using `cdc cli` (changefeed) #546
  - Backup & Restore (BR)
    * Support automatically adjusting GC time during backup #257
    * Adjust PD parameters when restoring data to speed up the restoration #198

16.15.18.4 Bug Fixes

- TiDB
  - Improve the logic that determines whether to use vectorization for expression execution in multiple operators #16383
  - Fix the issue that the `IndexMerge` hint fails to check the database name correctly #16932
  - Forbid truncating the sequence object #17037
  - Fix the issue that the `INSERT/UPDATE/ANALYZE/DELETE` statements can be performed on a sequence object #16957
  - Fix the issue that the internal SQL statements in the bootstrap phase are not correctly marked as internal queries in the Statement Summary table #17062
  - Fix the error that occurs when a filter condition supported by TiFlash but not by TiKV is pushed down to the `IndexLookupJoin` operator #17036
  - Fix the concurrency issue of the `LIKE` expression that might occur after the collation is enabled #16997
  - Fix the issue that the `LIKE` function cannot correctly build the `Range` query index after the collation is enabled #16783
  - Fix the issue that a wrong value is returned when executing `@@LAST_PLAN_FROM_CACHE` ↪ after the `Plan Cache` statement is triggered #16831
  - Fix the issue that `TableFilter` on the index is missed when calculating candidate paths for `IndexMerge` #16947
  - Fix the issue that a physical query plan cannot be generated when using the `MergeJoin` hint and the `TableDual` operator exists #17016
  - Fix the wrong capitalization of the values in the `Stmt_Type` column of the Statement Summary table #17018
  - Fix the issue that the `Permission Denied` error is reported because the service cannot be started when different users use the same `tmp-storage-path` #16996
  - Fix the issue that the `NotNullFlag` result type is incorrectly set for an expression whose result type is determined by multiple input columns, such as `CASE WHEN` #16995

  - Fix the issue that the green GC might leave unresolved locks when dirty stores exist #16949
  - Fix the issue that the green GC might leave unresolved locks when encountering a single key with multiple different locks #16948
  - Fix the issue of inserting a wrong value in the `INSERT VALUE` statement because a sub-query refers to a parent query column #16952
  - Fix the issue of incorrect results when using the `AND` operator on the `Float` value #16666
  - Fix the wrong information of the `WAIT_TIME` field in the expensive log #16907
  - Fix the issue that the `SELECT FOR UPDATE` statement cannot be recorded in the slow log in the pessimistic transaction mode #16897
  - Fix the wrong result that occurs when executing `SELECT DISTINCT` on a column of the `Enum` or `Set` type #16892
  - Fix the display error of `auto_random_base` in the `SHOW CREATE TABLE` statement #16864
  - Fix the incorrect value of `string_value` in the `WHERE` clause #16559
  - Fix the issue that the error message of the `GROUP BY` window function is inconsistent with that of MySQL #16165
  - Fix the issue that the `FLASH TABLE` statement fails to execute when the database name contains the uppercase letter #17167
  - Fix the inaccurate memory tracing of the Projection executor #17118
  - Fix the issue of incorrect time filtering of the `SLOW_QUERY` table in different time zones #17164
  - Fix the panic issue that occurs when `IndexMerge` is used with the virtual generated column #17126
  - Fix the capitalization issue of the `INSTR` and `LOCATE` function #17068
  - Fix the issue that the `tikv server timeout` error is reported frequently after the `tidb_allow_batch_cop` configuration is enabled #17161
  - Fix the issue that the result of performing `XOR` operation on the Float type is inconsistent with that of MySQL 8.0 #16978
  - Fix the issue that no error is reported when the unsupported `ALTER TABLE ↪ REORGANIZE PARTITION` statement is executed #17178
  - Fix the issue that an error is reported when `EXPLAIN FORMAT="dot" FOR ↪ CONNECTION ID` encounters an unsupported plan #17160
  - Fix the record issue of the prepared statement in the `EXEC_COUNT` column of the Statement Summary table #17086
  - Fix the issue that the value is not validated when setting the Statement Summary system variable #17129
  - Fix the issue that an error is reported if an overflow value is used to query the `UNSIGNED BIGINT` primary key when the plan cache is enabled #17120
  - Fix the incorrect QPS display by the machine instance and request type on the Grafana **TiDB Summary** dashboard #17105

- TiKV

  - Fix the issue that many empty Regions are generated after restoration #7632
  - Fix the panic issue of Raftstore when receiving out-of-order read index responses #7370
  - Fix the issue that an invalid storage or coprocessor read pool configuration might not be rejected when the unified thread pool is enabled #7513
  - Fix the panic issue of the `join` operation when the TiKV server is shut down #7713
  - Fix the issue that no result is returned when searching TiKV slow logs via diagnostics API #7776
  - Fix the issue that notable memory fragmentation is generated when the TiKV node is running for a long time #7556
  - Fix the issue that the SQL statement fails to execute when an invalid date is stored #7268
  - Fix the issue that the backup data cannot be restored from GCS #7739
  - Fix the issue that KMS key ID is not validated during encryption at rest #7719
  - Fix the underlying correctness issue of the Coprocessor in compilers of different architecture #7714 #7730
  - Fix the `snapshot ingestion` error when encrytion is enabled #7815
  - Fix the `Invalid cross-device link` error when rewriting the configuration file #7817
  - Fix the issue of wrong toml format when writing the configuration file to an empty file #7817
  - Fix the issue that a destroyed peer in Raftstore can still process requests #7836

- PD

  - Fix the `404` issue that occurs when using the `region key` command in pd-ctl #2399
  - Fix the issue that the monitor metrics of TSO and ID allocation are missing from the Grafana dashboard #2405
  - Fix the issue that pd-recover is not included in the Docker image #2406
  - Parse the path of data directory to an absolute path to fix the issue that TiDB Dashboard might not correctly display PD information #2420
  - Fix the issue that there is no default output when using the `scheduler config` ↪ `shuffle-region-scheduler` command in pd-ctl #2416

- TiFlash

  - Fix the issue that the wrong information of used capacity is report in some scenarios

- Tools

  - TiDB Binlog

    * Fix the issue that data of the `mediumint` type is not processed when the downstream is Kafka #962

    * Fix the issue that the reparo fails to parse the DDL statement when the database name in DDL is a keyword #961

  - TiCDC

    * Fix the issue of using the wrong time zone when the `TZ` environment variable is not set #512
    * Fix the issue that the owner does not clean up the resources when the server exits because some errors are not handled correctly #528
    * Fix the issue that TiCDC might be stuck when reconnecting to TiKV #531
    * Optimize the memory usage when initializing the table schema #534
    * Use the `watch` mode to monitor the replication status changes and perform quasi-real-time updates to reduce replication delay #481

  - Backup & Restore (BR)

    * Fix the issue that inserting data might trigger the `duplicate entry` error after BR restores a table with the `auto_random` attribute #241

16.15.19 TiDB 4.0 RC.1 Release Notes

Release date: April 28, 2020

TiDB version: 4.0.0-rc.1

16.15.19.1 Compatibility Changes

- TiKV

  - Disable the Hibernate Region feature by default #7618

- TiDB Binlog

  - Support the sequence DDL operation in Drainer #950

16.15.19.2 Important Bug Fixes

- TiDB

  - Fix the issue that the `INSERT ... ON DUPLICATE UPDATE` statement might be incorrectly executed on multiple rows in an explicit transaction because `MemBuffer` is not checked #16689
  - Fix the data inconsistency when locking duplicated keys on multiple rows #16769
  - Fix the panic that occurs when recycling the non-superbatch idle connection between TiDB instances #16303

- TiKV

  - Fix the deadlock issue caused by the probe request from TiDB #7540
  - Fix the issue that the minimum commit timestamp of a transaction might overflow which affects data correctness #7638

- TiFlash

  - Fix the data loss issue caused by the `rename table` operation when multiple data paths are configured
  - Fix the issue that an error occurs when reading data from a merged Region
  - Fix the issue that an error occurs when reading data from a Region that is in the abnormal state
  - Modify the mapping of table names in TiFlash to correctly support `recover table`/`flashback table`
  - Modify the storage path to fix the potential data loss issue that occurs when renaming the table
  - Fix the potential panic of TiDB when Super Batch is enabled
  - Modify the read mode in the online update scenario to improve the read performance

- TiCDC

  - Fix the replication failure that occurs because the schema internally maintained in TiCDC fails to correctly handle the timing issue of read and write operations #438 #450 #478 #496
  - Fix the bug that the TiKV client fails to correctly maintain the internal resources when encountering some TiKV anomalies #499 #492
  - Fix the bug that meta data is not correctly cleaned up and abnormally remains in the TiCDC nodes #488 #504
  - Fix the issue that the TiKV client fails to correctly handle the repeated sending of the prewrite event #446
  - Fix the issue that the TiKV client fails to correctly handle the redundant prewrite events received before the initialization #448

- Backup & Restore (BR)

  - Fix the issue that checksum is still executed when checksum is disabled #223
  - Fix the incremental replication failure when `auto-random` or `alter-pk` is enabled in TiDB #230 #231

16.15.19.3 New Features

- TiDB

  - Support sending Coprocessor requests to TiFlash in batches #16226
  - Enable the Coprocessor cache feature by default #16710

  - Parse only the registered sections of a statement in the special comment of the SQL statement #16157
  - Support using the `SHOW CONFIG` syntax to show the configurations of PD and TiKV instances #16475

- TiKV

  - Support using the user-owned KMS key for the server-side encryption when backing up data to S3 #7630
  - Enable the load-based `split region` operation #7623
  - Support validating common names #7468
  - Add the file lock check to avoid starting multiple TiKV instances that are bound to the same address #7447
  - Support AWS KMS in encryption at rest #7465

- Placement Driver (PD)

  - Remove `config manager` to let other components control their component configurations #2349

- TiFlash

  - Add the metrics report related to the read and write workloads of DeltaTree engine
  - Cache the `handle` and `version` columns to reduce the disk I/O of a single read or write request
  - Support pushing down the `fromUnixTime` and `dateFormat` functions
  - Evaluate the global state according to the first disk and report this evaluation
  - Add the graphics in Grafana related to the read and write workloads of DeltaTree engine
  - Optimize the decimal data encoding in the `Chunk` codec
  - Implement the gRPC API of Diagnostics (SQL diagnosis) to support querying system tables such as `INFORMATION_SCHEMA.CLUSTER_INFO`

- TiCDC

  - Support sending messages in batches in the Kafka sink module #426
  - Support file sorting in the processor #477
  - Support automatic `resolve lock` #459
  - Add the feature that automatically updates the TiCDC service GC safe point to PD #487
  - Add the timezone setting for data replication #498

- Backup and Restore (BR)

  - Support configuring S3/GCS in the storage URL #246

16.15.19.4 Bug Fixes

- TiDB
- Fix the issue that negative numbers cannot be correctly displayed in the system table because the columns are defined as unsigned #16004
- Add a warning when the `use_index_merge` hint contains the invalid index name #15960
- Forbid multiple instances of a TiDB server sharing the same temporary directory #16026
- Fix the panic that occurs during the execution of `explain for connection` when the plan cache is enabled #16285
- Fix the issue that the result of the `tidb_capture_plan_baselines` system variable is incorrectly displayed #16048
- Fix the issue that the `group by` clause in the `prepare` statement is incorrectly parsed #16377
- Fix the panic that might occur during the execution of the `analyze primary key` statement #16081
- Fix the issue that the TiFlash store information in the `cluster_info` system table is wrong #16024
- Fix the panic that might occur during the Index Merge process #16360
- Fix the issue that an incorrect result might occur when the Index Merge reader reads the generated columns #16359
- Fix the incorrect display of the default sequence value in the `show create table` statement #16526
- Fix the issue that the `not-null` error is returned because the sequence is used as the default values of the primary key #16510
- Fix the issue that no error is reported for a blocked SQL execution when TiKV continues to return the `StaleCommand` error #16530
- Fix the issue that an error is reported if you only specify `COLLATE` when creating a database; add the missing `COLLATE` part in the result of `SHOW CREATE DATABASE` #16540
- Fix the partition pruning failure when the plan cache is enabled #16723
- Fix the bug that `PointGet` returns wrong results when handling the overflow #16755

- Fix the issue that a wrong result is returned when querying the `slow_query` system table with equal time values #16806

- TiKV

  - Address the OpenSSL security issue: CVE-2020-1967 #7622
  - Avoid protecting rollback records written by `BatchRollback` to improve performance when many write conflicts exist in optimistic transactions #7604
  - Fix the issue that the needless wake-up of transactions results in useless retry and performance reduction in heavy lock-race workloads #7551
  - Fix the issue that the Region might be stuck in the multi-time merging #7518
  - Fix the issue that the learner is not deleted when deleting the learner #7518
  - Fix the issue that follower read might cause panic in raft-rs #7408
  - Fix the bug that a SQL operation might fail because of the `group by constant` error #7383
  - Fix the issue that an optimistic lock might block reads if the corresponding primary lock is a pessimistic lock #7328

- PD

  - Fix the issue that some APIs might fail in the TLS validation #2363
  - Fix the issue that the configuration API cannot accept a configuration item with a prefix #2354
  - Fix the issue that the `500` error is returned when the scheduler is not found #2328
  - Fix the issue that the `404` error is returned for the `scheduler config balance ↪ -hot-region-scheduler list` command #2321

- TiFlash

  - Disable the coarse-grained index optimization for the storage engine
  - Fix the bug that an exception is thrown when resolving locks for Regions and some locks need to be skipped
  - Fix the null pointer exception (NPE) when collecting the Coprocessor statistics
  - Fix the check for Region meta to ensure that the process of Region Split/Region Merge is correct
  - Fix the issue that the message size exceeds the limit for gRPC because the size of Coprocessor response is not estimated
  - Fix the handling of the `AdminCmdType::Split` command in TiFlash

16.15.20 TiDB 4.0 RC Release Notes

Release date: April 8, 2020

TiDB version: 4.0.0-rc

TiUP version: 0.0.3

> **Warning:**
>
> Some known issues are found in this version, and these issues are fixed in new versions. It is recommended that you use the latest 4.0.x version.

16.15.20.1 Compatibility Changes

- TiDB
  - Refuse to get started instead of returning an alert log when the tidb-server status port is occupied #15177
- TiKV
  - Support the `pipelined` feature in pessimistic transactions, which improves the TPC-C performance by 20%. The risk is that the transaction commit might fail because of lock failure during the execution #6984
  - Enable the `unify-read-pool` configuration item in new clusters by default and use the previous setting of this item in old clusters #7059
- Tools
  - TiDB Binlog
    * Add the configuration item for verifying Common Name #934

16.15.20.2 Important Bug Fixes

- TiDB
  - Fix the issue that replication between the upstream and downstream might go wrong when the DDL job is executed using the `PREPARE` statement because of the incorrect job query in the internal records #15435
  - Fix the issue of incorrect subquery result in the `Read Commited` isolation level #15471
  - Fix the issue of incorrect results caused by the Inline Projection optimization #15411
  - Fix the issue that the SQL Hint `INL_MERGE_JOIN` is executed incorrectly in some cases #15515
  - Fix the issue that columns with the `AutoRandom` attribute are rebased when the negative number is explicitly written to these columns #15397

16.15.20.3 New Features

- TiDB
  - Add the case-insensitive collation so that users can enable `utf8mb4_general_ci` and `utf8_general_ci` in a new cluster #33
  - Enhance the `RECOVER TABLE` syntax to support recovering truncated tables #15398
  - Refuse to get started instead of returning an alert log when the the tidb-server status port is occupied #15177
  - Optimize the write performance of using a sequence as the default column values #15216
  - Add the `DDLJobs` system table to query the details of DDL jobs #14837
  - Optimize the `aggFuncSum` performance #14887
  - Optimize the output of `EXPLAIN` #15507
- TiKV
  - Support the `pipelined` feature in pessimistic transactions, which improves the TPC-C performance by 20%. The risk is that the transaction commit might fail because of lock failure during the execution #6984
  - Support TLS in the HTTP port #5393
  - Enable the `unify-read-pool` configuration item in new clusters by default and use the previous setting of this item in old clusters #7059
- PD
  - Support getting the default PD configuration information through the HTTP API #2258
- Tools
  - TiDB Binlog
    * Add the configuration item for verifying Common Name #934
  - TiDB Lightning
    * Optimize the performance of TiDB Lightning #281 #275

16.15.20.4 Bug Fixes

- TiDB
  - Fix the issue that replication between the upstream and downstream might go wrong when the DDL job is executed using the `PREPARE` statement because of the incorrect job query in the internal records #15435

  - Fix the issue of incorrect subquery result in the `Read Commited` isolation level #15471
  - Fix the issue of possible wrong behavior when using `INSERT ... VALUES` to specify the `BIT(N)` data type #15350
  - Fix the issue that the DDL Job internal retry does not fully achieve the expected outcomes because the values of `ErrorCount` fail to be summed correctly #15373
  - Fix the issue that Garbage Collection might work abnormally when TiDB connects to TiFlash #15505
  - Fix the issue of incorrect result caused by the Inline Projection optimization #15411
  - Fix the issue that the SQL Hint `INL_MERGE_JOIN` is executed incorrectly in some cases #15515
  - Fix the issue that columns with the `AutoRandom` attribute are rebased when the negative number is explicitly written to these columns #15397

- TiKV

  - Fix the possible panic caused by transferring the leader when the Follower Read feature is enabled #7101

- Tools

  - TiDB Lightning

    * Fix the issue of data error caused by the error of character conversion when the backend is TiDB #283

  - TiCDC

    * Fix the issue that an error is returned if the `test` schema does not exist in the downstream when MySQL sink is executing the DDL statement #353
    * Support the real-time interactive mode in CDC cli #351
    * Support checking whether the table in the upstream can be replicated during data replication #368
    * Support asynchronous write to Kafka #344

16.15.21 TiDB 4.0.0 Beta.2 Release Notes

Release date: March 18, 2020

TiDB version: 4.0.0-beta.2

TiDB Ansible version: 4.0.0-beta.2

16.15.21.1 Compatibility Changes

- Tools

  - TiDB Binlog
    * Fix the issue that the system returns an error and exits when `disable-dispatch` and `disable-causality` are configured in Drainer #915

16.15.21.2 New Features

- TiKV
  - Support persisting the dynamically updated configuration into the hardware disk #6684
- PD
  - Support persisting the dynamically updated configuration into the hardware disk #2153
- Tools
  - TiDB Binlog
    * Support the bidirectional data replication between TiDB clusters #879 #903
  - TiDB Lightning
    * Support the TLS configuration #40 #270
  - TiCDC
    * Initial release of the change data capture (CDC), providing the following features:
      · Support capturing changed data from TiKV
      · Support replicating the changed data from TiKV to MySQL compatible databases, and guarantee the eventual data consistency
      · Support replicating the changed data to Kafka, and guarantee either the eventual data consistency or the row-level orderliness
      · Provide process-level high availability
  - Backup & Restore (BR)
    * Enable experimental features such as incremental backup and backing up files to Amazon S3 #175
- TiDB Ansible
  - Support injecting the node information to etcd #1196
  - Support deploying TiDB services on the ARM platform #1204

16.15.21.3 Bug Fixes

- TiKV
  - Fix the panic issue that might occur when meeting empty short values during the backup #6718

  - Fix the issue that Hibernate Regions might not be correctly awakened in some cases #6772 #6648 #6376

- PD
  - Fix the panic issue that the rule checker fails to allocate stores to Regions #2160
  - Fix the issue that after the dynamic configuration is enabled, the configuration might have replication delay when the Leader is being switched #2154

- Tools
  - Backup & Restore (BR)
    * Fix the issue that BR might fail to restore data of a large size because PD cannot process large-sized data #167
    * Fix the BR failure occurred because the BR version is not compatible with the TiDB version #186
    * Fix the BR failure occurred because the BR version is not compatible with TiFlash #194

16.15.22 TiDB 4.0.0 Beta.1 Release Notes

Release date: February 28, 2020

TiDB version: 4.0.0-beta.1

TiDB Ansible version: 4.0.0-beta.1

16.15.22.1 Compatibility Changes

- TiDB
  - Modify the type of the `log.enable-slow-log` configuration item from integer to Boolean #14864
  - Modify the `password` field name to `authentication_string` in the `mysql.user` system table to make it consistent with MySQL 5.7 (**This compatibility change means that you cannot roll back to earlier versions.**) #14598
  - Adjust the default value of the `txn-total-size-limit` configuration item from `1GB` to `100MB` #14522
  - Support dynamically modifying or updating configuration items read from PD #14750 #14303 #14830

- TiKV
  - Add the `readpool.unify-read-pool` configuration item (`True` by default) to control whether point queries use the same threads with Coprocessor #6375 #6401 #6534 #6582 #6585 #6593 #6597 #6677

- PD

  - Optimize the HTTP API to make it compatible with the configuration manager #2080

- TiDB Lightning
  - Use the default configurations specified in the document for certain items not configured in the configuration file #255

- TiDB Ansible
  - Rename `theflash` to `tiflash` #1130
  - Optimize the default values and related configurations in TiFlash's configuration file #1138

16.15.22.2 New Features

- TiDB
  - Support querying slow logs of any time in the `SLOW_QUERY / CLUSTER_SLOW_QUERY` system table #14840 #14878
  - Support SQL performance diagnosis
    * #14843 #14810 #14835 #14801 #14743
    * #14718 #14721 #14670 #14663 #14668
    * #14896
  - Support the `Sequence` function #14731 #14589 #14674 #14442 #14303 #14830
  - Support dynamically modifying or updating configuration items read from PD #14750 #14303 #14830
  - Add a feature of automatically reading data from different roles according to the load balancing policy and add the `leader-and-follower` system variable to enable this feature #14761
  - Add the `Coercibility` function #14739
  - Support setting TiFlash replicas in the partitioned table #14735 #14713 #14644
  - Improve the privilege check for the `SLOW_QUERY` table #14451
  - Support automatically write the intermediate results to the disk file if the memory is insufficient when using a SQL join #14708 #14279
  - Support checking table partitions by querying the `information_schema.PARTITIONS` system table #14347
  - Add the `json_objectagg` aggregate function #11154
  - Support logging rejected connection attempts in the audit log #14594
  - Add the `max-server-connections` configuration item (`4096` by default) to control the number of connections to a single server #14409
  - Support the isolation read specifying multiple storage engines at the server level #14440
  - Optimize the cost model of the `Apply` operator and the `Sort` operator to improve stability #13550 #14708

- TiKV

  - Support fetching configuration items from the status port via HTTP API #6480
  - Optimize the performance of `Chunk Encoder` in Coprocessor #6341

- PD

  - Support accessing to the distribution of hotspots in the cluster through Dashboard UI #2086
  - Support capturing and displaying `START_TIME` and `UPTIME` of cluster components #2116
  - Add the information of deployment path and component version in the returned message of the `member` API #2130
  - Add the `component` sub-command in pd-ctl to modify and check the configuration of other components (experimental) #2092

- TiDB Binlog

  - Support TLS between the components #904 #894
  - Add the `kafka-client-id` configuration item in Drainer to configure Kafka's client ID #902
  - Support purging the incremental backup data in Drainer #885

- TiDB Ansible

  - Support deploying multiple Grafana/Prometheus/Alertmanagers in one cluster #1142
  - Add the `metric_port` configuration item (`8234` by default) in TiFlash's configuration file #1145
  - Add the `flash_proxy_status_port` configuration item (`20292` by default) in TiFlash's configuration file #1141
  - Add the TiFlash monitoring dashboard #1147 #1151

16.15.22.3 Bug Fixes

- TiDB

  - Fix the issue that an error is reported when creating `view` with a column name that exceeds 64 characters #14850
  - Fix the issue that duplicate data exists in `information_schema.views` because the `create or replace view` statement is incorrectly processed #14832
  - Fix the incorrect results of `BatchPointGet` when `plan cache` is enabled #14855
  - Fix the issue that data is inserted into the wrong partitioned table after the timezone is modified #14370
  - Fix the panic occurred when rebuilding expression using the invalid name of the `IsTrue` function during the outer join simplification #14515
  - Fix the the incorrect privilege check for the`show binding` statement #14443

- TiKV

  - Fix the inconsistent behaviors of the `CAST` function in TiDB and TiKV #6463 #6461 #6459 #6474 #6492 #6569

- TiDB Lightning
  - Fix the bug that the web interface does not work outside the Server mode #259

16.15.23 TiDB 4.0 Beta Release Notes

Release date: January 17, 2020

TiDB version: 4.0.0-beta

TiDB Ansible version: 4.0.0-beta

16.15.23.1 TiDB

- Print the log or cancel the SQL execution when the memory used during the execution of `INSERT/REPLACE/DELETE/UPDATE` exceeds the limit specified by the `MemQuotaQuery` ↪ configuration item. The actual behavior depends on the `OOMAction` configuration. #14179 #14289 #14299
- Increase the accuracy of calculating the cost of `Index Join` by considering the row counts of both driving tables and driven tables #12085
- Add 15 SQL hints to control the behavior of the optimizer and make the optimizer more stable
  - #11253 #11364 #11673 #11740 #11746
  - #11809 #11996 #12043 #12059 #12246
  - #12382
- Improve the performance when the columns involved in a query can be fully covered by indexes #12022
- Improve the performance of table query by supporting the Index Merge feature #10121 #10512 #11245 #12225 #12248 #12305 #12843
- Improve the performance of Range calculation and reduce the CPU overhead by caching index results and eliminating duplicate results #12856
- Decouple the level of slow logs from the level of ordinary logs #12359
- Add the `oom-use-tmp-storage` parameter (`true` by default) to control whether to use temporary files to cache intermediate results when the memory usage for the execution of a single SQL statement exceeds `mem-quota-query` and the SQL contains `Hash Join` #11832 #11937 #12116 #12067
- Support using `create index/alter table` to create expression index and using `drop` ↪ `index` to drop expression index #14117
- Increase the default value of the `query-log-max-len` parameter to `4096` to reduce the number of truncated SQL outputs. This parameter can be adjusted dynamically. #12491

- Support adding the `AutoRandom` keyword in the column attribute to control whether the system automatically assigns a random integer to the primary key, which avoids the hotspot problem caused by the `AUTO_INCREMENT` primary key #13127
- Support Table Locks #11038
- Support using the `LIKE` or `WHERE` clause in `ADMIN SHOW DDL JOBS` for conditional filtering #12484
- Add the `TIDB_ROW_ID_SHARDING_INFO` column in the `information_schema.tables` ↪ table to output the `RowID` scattering information (for example, the value of the `SHARD_ROW_ID_BITS` column in table `A` is `"SHARD_BITS={bit_number}"`) #13418
- Optimize the error code of SQL error messages to avoid the situation that the `ERROR` ↪ `1105 (HY000)` code is used for multiple error messages (the `Unknown Error` type)
  - #14002 #13874 #13733 #13654 #13646
  - #13540 #13366 #13329 #13300 #13233
  - #13033 #12866 #14054
- Convert a narrow data range of the discrete type into `point set` and use CM-Sketch to improve the estimation accuracy when estimating the number of rows #11524
- Extract the `TopN` information from CM-Sketch for normal `Analyze` and separately maintain the frequently occurring values #11409
- Support dynamically adjusting the depth and width of CM-Sketch and the number of `TopN` information #11278
- Support automatically capturing and evolving SQL Binding #13199 #12434
- Optimize the encoding format of communication with TiKV by using `Chunk` to improve communication performance #12023 #12536 #12613 #12621 #12899 #13060 #13349
- Support the new row store format to improve the performance of the wide table #12634
- Optimize the `Recover Binlog` interface to ensure waiting all transactions to be committed before returning to the client #13740
- Support querying the binlog statuses enabled by TiDB servers in the cluster through the HTTP `info/all` interface #13025
- Support the MySQL-compatible `Read Committed` transaction isolation level when using the pessimistic transaction mode #14087
- Support large-sized transactions. The transaction size is limited by the size of the physical memory.
  - #11999 #11986 #11974 #11817 #11807
  - #12133 #12223 #12980 #13123 #13299
  - #13432 #13599
- Improve the stability of `Kill` #10841
- Support hexadecimal and binary expressions as separators in `LOAD DATA` #11029
- Improve the performance of `IndexLookupJoin` and reduce memory consumption during execution by splitting `IndexLookupJoin` into `IndexHashJoin` and `IndexMergeJoin` #8861 #12139 #12349 #13238 #13451 #13714
- Fix several issues relating to RBAC #13896 #13820 #13940 #14090 #13940 #13014
- Fix the issue that `VIEW` cannot be created because the `SELECT` statement contains `union` #12595

- Fix several issues relating to the `CAST` function
  - #12858 #11968 #11640 #11483 #11493
  - #11376 #11355 #11114 #14405 #14323
  - #13837 #13401 #13334 #12652 #12864
  - #12623 #11989
- Output the detailed `backoff` information of TiKV RPC in the slow log to facilitate troubleshooting #13770
- Optimize and unify the format of the memory statistics in the expensive log #12809
- Optimize the explicit format of `EXPLAIN` and support outputting information about the operator's usage of memory and disk #13914 #13692 #13686 #11415 #13927 #13764 #13720
- Optimize the check for duplicate values in `LOAD DATA` based on the transaction size and support setting the transaction size by configuring the `tidb_dml_batch_size` parameter #11132
- Optimize the performance of `LOAD DATA` by separating the data preparing routine and the commit routine and assigning the workload to different Workers #11533 #11284

16.15.23.2 TiKV

- Upgrade the RocksDB version to 6.4.6
- Fix the issue that the system cannot perform the compaction task normally when the disk space is used up by automatically creating a 2GB empty file when TiKV is started #6321
- Support quick backup and restoration
  - #6462 #6395 #6378 #6374 #6349
  - #6339 #6308 #6295 #6286 #6283
  - #6261 #6222 #6209 #6204 #6202
  - #6198 #6186 #6177 #6146 #6071
  - #6042 #5877 #5806 #5803 #5800
  - #5781 #5772 #5689 #5683
- Support reading data from Follower replicas
  - #5051 #5118 #5213 #5316 #5401
  - #5919 #5887 #6340 #6348 #6396
- Improve the performance of TiDB reading data through index #5682
- Fix the issue that the `CAST` function behaves inconsistently in TiKV and in TiDB
  - #6459 #6461 #6458 #6447 #6440
  - #6425 #6424 #6390 #5842 #5528
  - #5334 #5199 #5167 #5146 #5141
  - #4998 #5029 #5099 #5006 #5095
  - #5093 #5090 #4987 #5066 #5038

  - #4962 #4890 #4727 #6060 #5761
  - #5793 #5468 #5540 #5548 #5455
  - #5543 #5433 #5431 #5423 #5179
  - #5134 #4685 #4650 #6463

16.15.23.3 PD

- Support optimizing hotspot scheduling according to the load information of storage nodes
  - #1870 #1982 #1998 #1843 #1750
- Add the Placement Rules feature that supports controlling the number of replicas of any data range, the storage location, the storage host type and roles by combining different scheduling rules
  - #2051 #1999 #2042 #1917 #1904
  - #1897 #1894 #1865 #1855 #1834
- Support using plugins (experimental) #1799
- Add the feature that the schedulers support the customized configuration and key ranges (experimental) #1735 #1783 #1791
- Support automatically adjusting the scheduling speed according the cluster load information (experimental, disabled by default) #1875 #1887 #1902

16.15.23.4 Tools

- TiDB Lightning
  - Add the parameter in the command-line tool to set the password of the downstream database #253

16.15.23.5 TiDB Ansible

- Add checksum check in the package in case that the downloaded package is incomplete #1002
- Support checking the systemd version which must be `systemd-219-52` or later #1020 #1074
- Fix the issue that the log directory is incorrectly created when TiDB Lightning is started #1103
- Fix the issue that the customized port of TiDB Lightning is invalid #1107
- Support deploying and maintaining TiFlash #1119

16.16 v3.1

16.16.1 TiDB 3.1.2 Release Notes

Release date: June 4, 2020

TiDB version: 3.1.2

16.16.1.1 Bug Fixes

- TiKV
  - Fix the error handling issue during backup and restoration with S3 and GCS #7965
  - Fix the `DefaultNotFound` error that occurs during restoration #7838
- Tools
  - Backup & Restore (BR)
    * Retry automatically when the network is poor to improve stability with S3 and GCS storages #314 #7965
    * Fix a restoration failure that occurs because the Region leader cannot be found when restoring small tables #303
    * Fix a data loss issue during restoration when a table's row ID exceeds `2^(63)` #323
    * Fix the issue that empty databases and tables cannot be restored #318
    * Support using AWS KMS for server-side encryption (SSE) when targeting the S3 storage #261

16.16.2 TiDB 3.1.1 Release Notes

Release date: April 30, 2020

TiDB version: 3.1.1

TiDB Ansible version: 3.1.1

16.16.2.1 New Features

- TiDB
  - Add the table option for `auto_rand_base` #16812
  - Add the `Feature ID` comment: In the special comments of SQL statements, only the registered statement fragment can be parsed by the parser; otherwise, the statement is ignored #16155

- TiFlash
  - Cache the `handle` and `version` columns to reduce the disk I/O for a single read request
  - Add in Grafana the graphics related to the read and write workloads of DeltaTree engine
  - Optimize the decimal data encoding in the `Chunk` codec
  - Reduce the number of open file descriptors when TiFlash is in low workload

16.16.2.2 Bug Fixes

- TiDB
  - Fix the issue that the isolation read setting at the instance level does not take effect, and that the isolation read setting is incorrectly retained after TiDB is upgraded #16482 #16802
  - Fix the partition selection syntax on the hash partitioned table so that an error is not reported for syntaxes such as `partition (P0)` #16076
  - Fix the issue that when an `UPDATE` SQL statement only queries from a view but does not update the view, the update statement still reports an error #16789
  - Fix the issue of wrong results caused by removing the `not not` from the nested query #16423
- TiFlash
  - Fix the issue that an error occurs when reading data from a Region that is in the abnormal state
  - Modify the mapping of table names in TiFlash to correctly support `recover table`/`flashback table`
  - Modify the storage path to fix the potential data loss issue that occurs when renaming a table
  - Modify the read mode in the online update scenario to improve the read performance
  - Fix the issue that TiFlash fails to start normally after upgrade if the database/table name contains special characters
- Tools
  - Backup & Restore (BR)
    * Fix the issue that after BR restores a table with the `auto_random` attribute, inserting data might trigger the duplicate entry error #241

16.16.3 TiDB 3.1.0 GA Release Notes

Release date: April 16, 2020

TiDB version: 3.1.0 GA

TiDB Ansible version: 3.1.0 GA

16.16.3.1 Compatibility Changes

- TiDB
  - Support directly stopping starting TiDB if the HTTP listening port is unavailable when the `report-status` configuration item is enabled #16291
- Tools
  - Backup & Restore (BR)
    * BR does not support restoring data from the TiKV cluster earlier than 3.1 GA #233

16.16.3.2 New Features

- TiDB
  - Support displaying the information of Coprocessor tasks in `explain format = "dot"` #16125
  - Reduce the redundant stack information of log using the `disable-error-stack` configuration item #16182
- Placement Driver (PD)
  - Optimize the hot Region scheduling #2342
- TiFlash
  - Add the metrics report related to the read and write workloads of DeltaTree engine
  - Support pushing down the `fromUnixTime` and `dateFormat` functions
  - Disable the rough set filter by default
- TiDB Ansible
  - Add TiFlash monitor #1253 #1257
  - Optimize the configuration parameters of TiFlash #1262 #1265 #1271
  - Optimize the TiDB starting script #1268

16.16.3.3 Bug Fixes

- TiDB
  - Fix the panic issue caused by the merge join operation in some scenarios #15920
  - Fix the issue that some expressions are repeatedly counted in selectivity calculation #16052
  - Fix the panic issue occurred when loading the statistics information in extreme cases #15710
  - Fix the issue that an error is returned in some cases when equivalent expressions cannot be recognized in SQL query #16015
  - Fix the issue that an error is returned when querying the `view` of one database from another database #15867
  - Fix the panic issue that occurs when the column is handled using `fast analyze` #16080
  - Fix the incorrect character set of the `current_role` print result #16084
  - Refine the log of MySQL connection handshake error #15799
  - Fix the panic issue caused by port probing after the audit plugin is loaded #16065
  - Fix the panic issue of the `sort` operator on left join because the `TypeNull` class is mistaken as a variable-length type #15739
  - Fix the issue of inaccurate count of monitoring session retry errors #16120
  - Fix the issue of wrong results of `weekday` in the `ALLOW_INVALID_DATES` mode #16171
  - Fix the issue that Garbage Collection (GC) might not work normally when the cluster has TiFlash nodes #15761
  - Fix the issue that TiDB goes out of memory (OOM) when users set a large partition count when creating the hash partitioned table #16219
  - Fix the issue that warnings are mistaken as errors, and make the `UNION` statement have the same behavior as the `SELECT` statement #16138
  - Fix the execution error when `TopN` is pushed down to mocktikv #16200
  - Increase the initial length of `chunk.column.nullBitMap` to avoid unnecessary overhead of `runtime.growslice` #16142
- TiKV
  - Fix the panic issue caused by replica read #7418 #7369
  - Fix the issue that the restoration process creates empty Regions #7419
  - Fix the issue that repeated resolve lock requests might harm the atomicity of pessimistic transactions #7389
- TiFlash
  - Fix the potential issue of the `rename table` operation when replicating the schema from TiDB
  - Fix the issue of data loss caused by the `rename table` operation under multiple data path configurations

  - Fix the issue that TiFlash reports incorrect storage space in some scenarios
  - Fix the potential issue caused by reading from TiFlash when Region Merge is enabled

- Tools

  - TiDB Binlog

    * Fix the issue that TiFlash-related DDL jobs might interrupt the replication of Drainer #948 #942

  - Backup & Restore (BR)

    * Fix the issue that the `checksum` operation is still executed when it is disabled #223
    * Fix the issue that incremental backup fails when TiDB enables `auto-random` or `alter-pk` #230 #231

16.16.4 TiDB 3.1 RC Release Notes

Release date: April 2, 2020

TiDB version: 3.1.0-rc

TiDB Ansible version: 3.1.0-rc

> **Warning:**
>
> Some known issues are found in this version, and these issues are fixed in new versions. It is recommended that you use the latest 3.1.x version.

16.16.4.1 New Features

- TiDB

  - Use the binary search to re-implement partition pruning for better performance #15678
  - Support using the `RECOVER` syntax to recover the truncated table #15460
  - Add the `AUTO_RANDOM` ID cache for retrying statements and recovering tables #15393
  - Support restoring the state of the `AUTO_RANDOM` ID allocator using the `recover table` statement #15393
  - Support `YEAR`, `MONTH`, and `TO_DAY` functions as the partitioning keys of the Hash partitioned table #15619

  - Add the table ID to the schema-change related tables only when keys need to be locked in the `SELECT... FOR UPDATE` statement #15708
  - Add the feature of automatically reading data from different roles according to the load balancing policy and add the `leader-and-follower` system variable to enable this feature #15721
  - Support dynamically updating the TLS certificate every time TiDB establishes a new connection to update expired client certificate without restarting the RPC client side #15163
  - Upgrade PD Client to support loading the latest certificate every time TiDB establishes a new connection #15425
  - Forcibly use the HTTPS protocol with the configured TLS certificates between a TiDB server and a PD server, or between two TiDB servers when `cluster-ssl-*` is configured #15430
  - Add the MySQL-compatible `--require-secure-transport` startup option to force the client to enable TLS authentication during the configuration #15442
  - Add the `cluster-verify-cn` configuration item. After configuration, the status service can only be used when with the corresponding CN certificate #15137

- TiKV

  - Support backing up data with the Raw KV API #7051
  - Support TLS authentication for the status server #7142
  - Support TLS authentication for the KV server #7305
  - Optimize the time to hold locks to improve the performance of backup #7202

- PD

  - Support scheduling learner using `shuffle-region-scheduler` #2235
  - Add commands in pd-ctl to configure Placement Rules #2306

- Tools

  - TiDB Binlog

    * Support TLS authentication between the components #931 #937 #939
    * Add the `kafka-client-id` configuration item in Drainer to configure Kafka's client ID #929

  - TiDB Lightning

    * Optimize the performance of TiDB Lightning #281 #275
    * Support TLS authentication for TiDB Lightning #270

  - Backup & Restore (BR)

    * Optimize the log output #189

- TiDB Ansible

- Optimize the way the TiFlash data directories are created #1242
- Add the `Write Amplification` monitoring item in TiFlash #1234
- Optimize the error message of failed preflight checks when CPU epollexclusive is unavailable #1243

16.16.4.2 Bug Fixes

- TiDB
  - Fix the information schema error caused by frequently updating the TiFlash replica #14884
  - Fix the issue that `last_insert_id` is incorrectly generated when applying `AUTO_RANDOM` #15149
  - Fix the issue that updating the status of TiFlash replica might cause the DDL operation to get stuck #15161
  - Forbid `Aggregation` pushdown and `TopN` pushdown when there are predicates that cannot be pushed down #15141
  - Forbid the nested `view` creation #15440
  - Fix the error occurred when executing `SELECT CURRENT_ROLE()` after `SET ROLE ALL` #15570
  - Fix the failure to identify the `view` name when executing the `select view_name .col_name from view_name` statement #15573
  - Fix the issue that an error might occur when pre-processing DDL statements during the write of binlog information #15444
  - Fix the panic occurred when accessing both `views` and partitioned tables #15560
  - Fix the error occurred when executing the `VALUES` function with the `update duplicate key` statement that contains the `bit(n)` data type #15487
  - Fix the issue that the specified maximum execution time fails to take effect in some scenarios #15616
  - Fix the issue that whether the current `ReadEngine` contains TiKV server is not checked when generating the execution plan using `Index Scan` #15773
- TiKV
  - Fix the issue of conflict check failure or data index inconsistency caused by inserting an existing key into a transaction and then deleting it immediately when disabling the consistency check parameter #7112
  - Fix the calculation error when `TopN` compares unsigned integers #7199
  - Introduce a flow control mechanism in Raftstore to solve the problem that without flow control, it might cause slow log tracking and cause the cluster to be stuck; and the problem that the large transaction size might cause the frequent reconnection among TiKV servers #7087 #7078
  - Fix the issue that pending read requests sent to replicas might be permanently blocked #6543
  - Fix the issue that replica read might be blocked by applying snapshots #7249

  - Fix the issue that transferring leader might cause TiKV to panic #7240
  - Fix the issue that all SST files are filled with zeroes when backing up data to S3 #6967
  - Fix the issue that the size of SST file is not recorded during backup, resulting in many empty Regions after restoration #6983
  - Support AWS IAM web identity for backup #7297

- PD

  - Fix the issue of incorrect Region information caused by data race when PD processes Region heartbeats #2234
  - Fix the issue that `random-merge-scheduler` fails to follow location labels and Placement Rules #2212
  - Fix the issue that a placement rule is overwritten by another placement rule with the same `startKey` and `endKey` #2222
  - Fix the issue that the version number of API is inconsistent with that of PD server #2192

- Tools

  - TiDB Lightning

    * Fix the bug that the `&` character is replaced by the `EOF` character in TiDB backend #283

  - Backup & Restore (BR)

    * Fix the issue that BR cannot restore the TiFlash cluster data #194

16.16.5 TiDB 3.1 Beta.2 Release Notes

Release date: March 9, 2020

TiDB version: 3.1.0-beta.2

TiDB Ansible version: 3.1.0-beta.2

> **Warning:**
>
> Some known issues are found in this version, and these issues are fixed in new versions. It is recommended that you use the latest 3.1.x version.

16.16.5.1 Compatibility Changes

- Tools
  - TiDB Lightning
    * Use the default configurations specified in the TiDB Lightning Configuration for certain items not configured in the configuration file #255
    * Add the `--tidb-password` CLI parameter to set the TiDB password #253

16.16.5.2 New Features

- TiDB
  - Support adding the `AutoRandom` keyword in the column attribute to enable TiDB to automatically assign random integers to the primary key, which avoids the write hot spot caused by the `AUTO_INCREMENT` primary key #14555
  - Support creating or deleting column store replicas through DDL statements #14537
  - Add the feature that the optimizer can independently select different storage engines #14537
  - Add the feature that the SQL hint supports different storage engines #14537
  - Support reading data from followers by using the `tidb_replica_read` system variable #13464
- TiKV
  - Raftstore
    * Add the `peer_address` parameter to connect other nodes to the TiKV server #6491
    * Add the `read_index` and `read_index_resp` monitoring metrics to monitor the number of `ReadIndex` requests #6610
- PD Client
  - Support reporting statistics of local threads to PD #6605
- Backup
  - Replace the `RocksIOLimiter` flow control library with Rust's `async-speed-limit` ↪ flow control library to eliminate extra memory copies when backing up a file #6462
- PD
  - Tolerate backslash in the location label name #2084
- TiFlash
  - Initial release

- TiDB Ansible
  - Support deploying multiple Grafana/Prometheus/Alertmanager in one cluster #1143
  - Support deploying the TiFlash component #1148
  - Add monitoring metrics related to the TiFlash component #1152

16.16.5.3 Bug Fixes

- TiKV
  - Raftstore
    * Fix the issue that the read requests cannot be processed because data is not properly read from Hibernate Regions #6450
    * Fix the panic issue caused by the `ReadIndex` requests during the leader transfer process #6613
    * Fix the issue that Hibernate Regions are not correctly awakened in some special conditions #6730 #6737 #6972
  - Backup
    * Fix the inconsistent data index during the restoration caused by the backup of the extra data #6659
    * Fix the panic caused by incorrectly processing the deleted values during the backup #6726
- PD
  - Fix the panic occurred because the rule checker fails to assign stores to Regions #2161
- Tools
  - TiDB Lightning
    * Fix the bug that the web interface does not work outside the Server mode #259
  - BR (Backup and Restore)
    * Fix the issue that BR cannot exit in time due to an unrecoverable error it encounters when restoring data #152
- TiDB Ansible
  - Fix the issue that the rolling update command fails because the PD Leader cannot be obtained in some scenarios #1122

16.16.6 TiDB 3.1 Beta.1 Release Notes

Release date: January 10, 2020

TiDB version: 3.1.0-beta.1

TiDB Ansible version: 3.1.0-beta.1

16.16.6.1 TiKV

- backup
  - Change the name of the backup file from `start_key` to the hash value of `start_key` to reduce the file name's length for easy reading #6198
  - Disable RocksDB's `force_consistency_checks` check to avoid false positives in the consistency check #6249
  - Add the incremental backup feature #6286
- sst_importer
  - Fix the issue that the SST file does not have MVCC properties during restoring #6378
  - Add the monitoring items such as `tikv_import_download_duration`, `tikv_import_download_`
    ↪ , `tikv_import_ingest_duration`, `tikv_import_ingest_bytes`, and `tikv_import_error_counter` to observe the overheads of downloading and ingesting SST files #6404
- raftstore
  - Fix the issue of Follower Read that the follower reads stale data when the leader changes, thus breaking transaction isolation #6343

16.16.6.2 Tools

- BR (Backup and Restore)
  - Fix the inaccurate backup progress information #127
  - Improve the performance of splitting Regions #122
  - Add the backup and restore feature for partitioned tables #137
  - Add the feature of automatically scheduling PD schedulers #123
  - Fix the issue that data is overwritten after non `PKIsHandle` tables are restored #139

16.16.6.3 TiDB Ansible

- Add the feature of automatically disabling Transparent Huge Pages (THP) in the operating system during the initialization phase #1086
- Add the Grafana monitoring for BR components #1093
- Optimize the deployment of TiDB Lightning by automatically creating related directories #1104

16.16.7 TiDB 3.1 Beta Release Notes

Release date: December 20, 2019

TiDB version: 3.1.0-beta

TiDB Ansible version: 3.1.0-beta

16.16.7.1 TiDB

- SQL Optimizer
  - Enrich SQL hints #12192
- New feature
  - Support the Follower Read feature #12535

16.16.7.2 TiKV

- Support the distributed backup and restore feature #5532
- Support the Follower Read feature #5562

16.16.7.3 PD

- Support the distributed backup and restore feature #1896

16.17 v3.0

16.17.1 TiDB 3.0.20 Release Notes

Release date: December 25, 2020

TiDB version: 3.0.20

16.17.1.1 Compatibility Change

- TiDB
  - Deprecate the `enable-streaming` configuration item #21054

16.17.1.2 Improvements

- TiDB
  - Raise an error when preparing the `LOAD DATA` statement #21222
- TiKV
  - Add the `end_point_slow_log_threshold` configuration item #9145

16.17.1.3 Bug Fixes

- TiDB
  - Fix the incorrect cache of the transaction status for pessimistic transactions #21706
  - Fix the issue of inaccurate statistics that occurs when querying `INFORMATION_SCHEMA.TIDB_HOT_REGIONS` #21319
  - Fix the issue that `DELETE` might not delete data correctly when the database name is not in a pure lower representation #21205
  - Fix the issue of stack overflow that occurs when building the recursive view #21000
  - Fix the issue of goroutine leak in TiKV client #20863
  - Fix the wrong default zero value for the `year` type #20828
  - Fix the issue of goroutine leak in index lookup join #20791
  - Fix the issue that executing `INSERT SELECT FOR UPDATE` returns the malformed packet in the pessimistic transaction #20681
  - Fix the unknown time zone `'posixrules'` #20605
  - Fix the issue that occurs when converting the unsigned integer type to the bit type #20362
  - Fix the corrupted default value of the bit type column #20339
  - Fix the potentially incorrect results when one of the equal condition is the `Enum` or `Set` type #20296
  - Fix a wrong behavior of `!= any()` #20061
  - Fix the issue that type conversion in `BETWEEN...AND...` returns invalid results #21503
  - Fix a compatibility issue with the `ADDDATE` function #21008
  - Set the correct default value for newly added `Enum` column #20999
  - Fix the result of SQL statements like `SELECT DATE_ADD('2007-03-28 22:08:28',INTERVAL "-2.-2" SECOND)` to be compatible with MySQL #20627
  - Fix the incorrect default value when modifying the column type #20532
  - Fix the issue that the `timestamp` function gets wrong result when the input argument is the `float` or `decimal` type #20469
  - Fix a potential deadlock issue in statistics #20424
  - Fix the issue that the overflown float type data is inserted #20251
- TiKV
  - Fix the issue that an error is returned indicating that a key exists when this key is locked and deleted in a committed transaction #8931
- PD
  - Fix the issue that too many logs are printed when starting PD and when there are too many stale Regions #3064

16.17.2 TiDB 3.0.19 Release Notes

Release date: September 25, 2020

TiDB version: 3.0.19

16.17.2.1 Compatibility Changes

- PD
  - Change the import path from `pingcap/pd` to `tikv/pd` #2779
  - Change the copyright information from `PingCAP, Inc` to `TiKV Project Authors` #2777

16.17.2.2 Improvements

- TiDB
  - Mitigate the impact of failure recovery on QPS performance #19764
  - Support adjusting the concurrency of the `union` operator #19885
- TiKV
  - Set `sync-log` to `true` as a nonadjustable value #8636
- PD
  - Add an alert rule for PD restart #2789

16.17.2.3 Bug Fixes

- TiDB
  - Fix the query error that occurs when the `slow-log` file does not exist #20050
  - Add the privilege check for `SHOW STATS_META` and `SHOW STATS_BUCKET` #19759
  - Forbid changing the decimal type to the integer type #19681
  - Fix the issue that the constraint is not checked when altering the `ENUM`/`SET` type column #20045
  - Fix the bug that tidb-server does not release table locks after a panic #20021
  - Fix the bug that the `OR` operator is not handled correctly in the `WHERE` clause #19901
- TiKV

  - Fix the bug that TiKV panics when parsing responses with missing reason phrases #8540

- Tools
  - TiDB Lightning
    * Fix the issue that the TiDB Lightning process does not exit in time when encountering illegal UTF characters in CSV in the strict mode #378

16.17.3 TiDB 3.0.18 Release Notes

Release date: August 21, 2020

TiDB version: 3.0.18

16.17.3.1 Improvements

- Tools
  - TiDB Binlog
    * Support the time duration format of Go for the Pump GC configuration #996

16.17.3.2 Bug Fixes

- TiDB
  - Fix the issue that the wrong handling of the `decimal` type by the `Hash` function causes the wrong HashJoin result #19185
  - Fix the issue that the wrong handling of the `set` and `enum` types by the `Hash` function causes the wrong HashJoin result #19175
  - Fix the issue that the check for duplicate keys fails in the pessimistic locking mode #19236
  - Fix the issue that the `Apply` and `Union Scan` operators cause the wrong execution result #19297
  - Fix the issue that some cached execution plans are incorrectly executed in transaction #19274

- TiKV
  - Change the GC failure log from `error` to the `warning` level #8444

- Tools
  - TiDB Lightning
    * Fix the issue that the `--log-file` argument does not take effect #345
    * Fix the syntax error on empty binary/hex literals when using TiDB-backend #357
    * Fix the unexpected `switch-mode` call when using TiDB-backend #368

16.17.4 TiDB 3.0.17 Release Notes

Release date: Aug 3, 2020

TiDB version: 3.0.17

16.17.4.1 Improvements

- TiDB
  - Decrease the default value of the `query-feedback-limit` configuration item from 1024 to 512, and improve the statistics feedback mechanism to ease its impact on the cluster #18770
  - Limit batch split count for one request #18694
  - Accelerate `/tiflash/replica` HTTP API when there are many history DDL jobs in the TiDB cluster #18386
  - Improve row count estimation for index equal condition #17609
  - Speed up the execution of `kill tidb conn_id` #18506
- TiKV
  - Add the `hibernate-timeout` configuration that delays region hibernation to improve rolling update performance #8207
- Tools
  - TiDB Lightning
    * `[black-white-list]` has been deprecated with a newer, easier-to-understand filter format #332

16.17.4.2 Bug Fixes

- TiDB
  - Return the actual error message instead of an empty set when a query which contains `IndexHashJoin` or `IndexMergeJoin` encounters a panic #18498
  - Fix the unknown column error for SQL statements like `SELECT a FROM t HAVING t.a` #18432
  - Forbid adding a primary key for a table when the table has no primary key or when the table already has an integer primary key #18342
  - Return an empty set when executing `EXPLAIN FORMAT="dot" FOR CONNECTION` #17157
  - Fix `STR_TO_DATE`'s handling for format token'%r', '%h' #18725
- TiKV

  - Fix a bug that might read stale data during region merging #8111
  - Fix the issue of memory leak during the scheduling process #8355

- Tools

  - TiDB Lightning

    * Fix the issue that the `log-file` flag is ignored #345

16.17.5 TiDB 3.0.16 Release Notes

Release date: July 03, 2020

TiDB version: 3.0.16

16.17.5.1 Improvements

- TiDB

  - Support the `is null` filter condition in hash partition pruning #17308
  - Assign different `Backoffer`s to each Region to avoid the SQL timeout issue when multiple Region requests fail at the same time #17583
  - Split separate Regions for the newly added partition #17668
  - Discard feedbacks generated from the `delete` or `update` statement #17841
  - Correct the usage of `json.Unmarshal` in `job.DecodeArgs` to be compatible with future Go versions #17887
  - Remove sensitive information in the slow query log and the statement summary table #18128
  - Match the MySQL behavior with `DateTime` delimiters #17499
  - Handle `%h` in date formats in the range that is consistent with MySQL #17496

- TiKV

  - Avoid sending store heartbeats to PD after snapshots are received #8145
  - Improve the PD client log #8091

16.17.5.2 Bug Fixes

- TiDB

  - Fix the data inconsistency issue occurred because the lock of a written and deleted primary key in one transaction is resolved by another transaction #18248
  - Fix the `Got too many pings` gRPC error log in the PD server-side followers #17944
  - Fix the panic issue that might occur when the child of HashJoin returns the `TypeNull` column #17935

  - Fix the error message when access is denied #17722
  - Fix JSON comparison issue for the `int` and `float` types #17715
  - Update the failpoint which causes data race #17710
  - Fix the issue that the timeout pre-split Regions might not work when creating tables #17617
  - Fix the panic caused by ambiguous error messages after the sending failure #17378
  - Fix the issue that `FLASHBACK TABLE` might fail in some special cases #17165
  - Fix the issue of inaccurate range calculation results when statements only have string columns #16658
  - Fix the query error occurred when the `only_full_group_by` SQL mode is set #16620
  - Fix the issue that the field length of results returned from the `case when` function is inaccurate #16562
  - Fix the type inference for the decimal property in the `count` aggregate function #17702

- TiKV

  - Fix the potential wrong result read from ingested files #8039
  - Fix the issue that a peer cannot be removed when its store is isolated during multiple merge processes #8005

- PD

  - Fix the `404` error when querying Region keys in PD Control #2577

16.17.6 TiDB 3.0.15 Release Notes

Release date: June 5, 2020

TiDB version: 3.0.15

16.17.6.1 New Features

- TiDB

  - Forbid the query in partitioned tables to use the plan cache feature #16759
  - Support the `admin recover index` and `admin check index` statements on partitioned tables #17315 #17390
  - Support partition pruning of the `in` condition for Range partitioned tables #17318
  - Optimize the output of `SHOW CREATE TABLE`, and add quotation marks to the partition name #16315
  - Support the `ORDER BY` clause in the `GROUP_CONCAT` function #16988
  - Optimize the memory allocation mechanism of `CMSketch` statistics to reduce the impact of garbage collection (GC) on performance #17543

- PD
  - Add a policy in which PD performs scheduling in terms of the number of Leaders #2479

16.17.6.2 Bug Fixes

- TiDB
  - Use deep copy to copy the `enum` and `set` type data in the `Hash` aggregate function; fix an issue of correctness #16890
  - Fix the issue that `PointGet` returns incorrect results because of the wrong processing logic of integer overflow #16753
  - Fix the issue of incorrect results caused by incorrect processing logic when the `CHAR()` function is used in the query predicate #16557
  - Fix the issue of inconsistent results in the storage layer and calculation layer of the `IsTrue` and `IsFalse` functions #16627
  - Fix the incorrect `NotNull` flags in some expressions, such as `case when` #16993
  - Fix the issue that the optimizer cannot find a physical plan for `TableDual` in some scenarios #17014
  - Fix the issue that the syntax for partition selection does not take effect correctly in the Hash partitioned table #17051
  - Fix the inconsistent results between TiDB and MySQL when XOR operates on a floating-point number #16976
  - Fix the error that occurs when executing DDL statement in the prepared manner #17415
  - Fix the incorrect processing logic of computing the batch size in the ID allocator #17548
  - Fix the issue that the `MAX_EXEC_TIME` SQL hint does not take effect when the time exceeds the expensive threshold #17534
- TiKV
  - Fix the issue that memory defragmentation is not effective after running for a long time #7790
  - Fix the panic issue caused by incorrectly removing snapshot files after TiKV is restarted accidentally #7925
  - Fix the gRPC disconnection caused by too large message packages #7822

16.17.7 TiDB 3.0.14 Release Notes

Release date: May 9, 2020

TiDB version: 3.0.14

16.17.7.1 Compatibility Changes

- TiDB
  - Adjust the user privilege in `performance_schema` and `metrics_schema` from read-write to read-only #15417

16.17.7.2 Important Bug Fixes

- TiDB
  - Fix the issue that the query result of `index join` is incorrect when the `join` ↪ condition has multiple equivalent conditions on the column with the `handle` attribute #15734
  - Fix the panic that occurs when performing the `fast analyze` operation on the column with the `handle` attribute #16079
  - Fix the issue that the `query` field in the DDL job structure is incorrect when the DDL statement is executed in a way of `prepare`. This issue might cause data inconsistency between the upstream and the downstream when Binlog is used for data replication. #15443
- TiKV
  - Fix the issue that repeated requests on the cleanup of lock might destroy the atomicity of the transaction #7388

16.17.7.3 New Features

- TiDB
  - Add the schema name column and the table name column to the query results of the `admin show ddl jobs` statement #16428
  - Enhance the `RECOVER TABLE` syntax to support recovering truncated tables #15458
  - Support the privilege check for the `SHOW GRANTS` statement #16168
  - Support the privilege check for the `LOAD DATA` statement #16736
  - Improve the performance of partition pruning when functions related to time and date are used as partition keys #15618
  - Adjust the log level of `dispatch error` from `WARN` to `ERROR` #16232
  - Support the `require-secure-transport` startup option to force clients to use TLS #15415
  - Support HTTP communication between TiDB components when TLS is configured #15419

  - Add the `start_ts` information of the current transaction to the `information_schema` ↪ `.processlist` table #16160
  - Support automatically reloading the TLS certificate information used for communication among clusters #15162
  - Improve the read performance of the partitioned tables by restructuring the partition pruning #15628
  - Support the partition pruning feature when `floor(unix_timestamp(a))` is used as the partition expression of the `range` partition table #16521
  - Allow executing the `update` statement that contains a `view` and does not update the `view` #16787
  - Prohibit creating nested `views` #15424
  - Prohibit truncating `view` #16420
  - Prohibit using the `update` statement to explicitly update the values of a column when this column is not in the `public` state #15576
  - Prohibit starting TiDB when the `status` port is occupied #15466
  - Change the character set of the `current_role` function from `binary` to `utf8mb4` #16083
  - Improve `max-execution-time` usability by checking the interrupt signal when the data of a new Region is read #15615
  - Add the `ALTER TABLE ... AUTO_ID_CACHE` syntax for explicitly setting the cache step of `auto_id` #16287

- TiKV

  - Improve the performance when many conflicts and the `BatchRollback` condition exist in optimistic transactions #7605
  - Fix the issue of decreased performance that occurs because the pessimistic lock `waiter` is frequently awakened when many conflicts exist in pessimistic transactions #7584

- Tools

  - TiDB Lightning

    * Support printing the TiKV cluster mode using the `fetch-mode` sub-command of tidb-lightning-ctl #287

16.17.7.4 Bug Fixes

- TiDB

  - Fix the issue that `WEEKEND` function is not compatible with MySQL when the SQL mode is `ALLOW_INVALID_DATES` #16170
  - Fix the issue that the `DROP INDEX` statement fails to execute when the index column contains the auto-increment primary key #16008

- Fix the issue of incorrect values of the `TABLE_NAMES` column in the Statement Summary #15231
- Fix the issue that some expressions have incorrect results when the plan cache is enabled #16184
- Fix the issue that the result of the `not`/`istrue`/`isfalse` function is incorrect #15916
- Fix the panic caused by the `MergeJoin` operation on tables with redundant indexes #15919
- Fix the issue caused by incorrectly simplifying the link when the predicate only refers to the outer table #16492
- Fix the issue that the `CURRENT_ROLE` function reports an error caused by the `SET ROLE` statement #15569
- Fix the issue that the result of the `LOAD DATA` statement is incompatible with MySQL when this statement encounters `\` #16633
- Fix the issue that the database visibility is incompatible with MySQL #14939
- Fix the issue of incorrect privilege check for the `SET DEFAULT ROLE ALL` statement #15585
- Fix the issue of partition pruning failure caused by the plan cache #15818
- Fix the issue that `schema change` is reported during the transaction commit when concurrent DDL operations are performed on a table and blocking exists, because the transaction does not lock the related table #15707
- Fix the incorrect behavior of `IF(not_int, *, *)` #15356
- Fix the incorrect behavior of `CASE WHEN (not_int)` #15359
- Fix the issue that the `Unknown column` error message is returned when using a `view` that is not in the current schema #15866
- Fix the issue that the result of parsing time strings is incompatible with MySQL #16242
- Fix the possible panic of the collation operator in `left join` when a `null` column exists in the right child node #16528
- Fix the issue that no error message is returned even though the SQL execution is blocked when TiKV keeps returning the `StaleCommand` error message #16528
- Fix the possible panic caused by the port probing when the audit plugin is enabled #15967
- Fix the panic caused when `fast analyze` works on indices only #15967
- Fix the possible panic of the `SELECT * FROM INFORMATION_SCHEMA.PROCESSLIST` statement execution in some cases #16309
- Fix the issue of TiDB OOM caused by specifying a large number of partitions (for example, `9999999999999`) when the hash partition table is created without checking the number of partitions before allocating memory #16218
- Fix the issue of incorrect information of partitioned tables in `information_schema` ↪ `.tidb_hot_table` #16726
- Fix the issue that the partition selection algorithm does not take effect on the hash partitioned table #16070
- Fix the issue that the HTTP API of the MVCC series does not support partitioned tables #16191

- Keep the error handling of the `UNION` statement consistent with that of the `SELECT` statement #16137
- Fix the issue of incorrect behavior when the parameter type of the `VALUES` function is `bit(n)` #15486
- Fix the issue that the processing logic of TiDB is inconsistent with MySQL when the `view` column name is too long. In this case, the system automatically generates a short column name. #14873
- Fix the issue that `(not not col)` is incorrectly optimized as `col` #16094
- Fix the issue of incorrect `range` of the inner table built by `IndexLookupJoin` plans #15753
- Fix the issue that `only_full_group_by` fails to correctly check expressions with brackets #16012
- Fix the issue that an error is returned when the `select view_name.col_name from view_name` statement is executed #15572

- TiKV

  - Fix the issue that the node cannot be deleted correctly after the isolation recovery in some cases #7703
  - Fix the issue of data loss during network isolation caused by the Region Merge operation #7679
  - Fix the issue that learner cannot be removed correctly in some cases #7598
  - Fix the issue that the scanning result of raw key-value pairs might be out of order #7597
  - Fix the issue of reconnection when the batch of Raft messages is too large #7542
  - Fix the issue of gRPC thread deadlock caused by the empty request #7538
  - Fix the issue that the processing logic of restarting the learner is incorrect during the merge process #7457
  - Fix the issue that repeated requests on the cleanup of lock might destroy the atomicity of the transaction #7388

16.17.8 TiDB 3.0.13 Release Notes

Release date: April 22, 2020

TiDB version: 3.0.13

16.17.8.1 Bug Fixes

- TiDB

  - Fix the issue caused by unchecked `MemBuffer` that the `INSERT ... ON DUPLICATE KEY UPDATE` statement might be executed incorrectly within a transaction when users need to insert multiple rows of duplicate data #16690

- TiKV
  - Fix the issue that the system might get stuck and the service is unavailable if `Region Merge` is executed repeatedly #7612

16.17.9 TiDB 3.0.12 Release Notes

Release date: March 16, 2020

TiDB version: 3.0.12

TiDB Ansible version: 3.0.12

> **Warning:**
>
> Some known issues are found in this version, and these issues are fixed in new versions. It is recommended that you use the latest 3.0.x version.

16.17.9.1 Compatibility Changes

- TiDB
  - Fix the issue of inaccurate timing of prewrite binlog in slow query log. The original timing field was called `Binlog_prewrite_time`. After this fix, the name is changed to `Wait_prewrite_binlog_time`. #15276

16.17.9.2 New Features

- TiDB
  - Support dynamic loading of the replaced certificate file by using the `alter instance` statement #15080 #15292
  - Add the `cluster-verify-cn` configuration item. After configuration, the status service can only be used when with the corresponding CN certificate. #15164
  - Add a flow limiting feature for DDL requests in each TiDB server to reduce the error reporting frequency of DDL request conflicts #15148
  - Support exiting of the TiDB server when binlog write fails #15339
- Tools
  - TiDB Binlog
    - Add the `kafka-client-id` configuration item in Drainer, which supports connecting to Kafka clients to configure the client ID #929

16.17.9.3 Bug Fixes

- TiDB
  - Make `GRANT`, `REVOKE` guarantee atomicity when modifying multiple users #15092
  - Fix the issue that the locking of pessimistic lock on the partition table failed to lock the correct row #15114
  - Make the error message display according to the value of `max-index-length` in the configuration when the index length exceeds the limit #15130
  - Fix the incorrect decimal point issue of the `FROM_UNIXTIME` function #15270
  - Fix the issue of conflict detection failure or data index inconsistency caused by deleting records written by oneself in a transaction #15176
- TiKV
  - Fix the issue of conflict detection failure or data index inconsistency caused by inserting an existing key into a transaction and then deleting it immediately when disabling the consistency check parameter #7054
  - Introduce a flow control mechanism in Raftstore to solve the problem that without flow control, it might lead to too slow tracking and cause the cluster to be stuck, and the transaction size might cause frequent reconnection of TiKV connections #7072 #6993
- PD
  - Fix the issue of incorrect Region information caused by data race when PD processes Region heartbeats #2233
- TiDB Ansible
  - Support deploying multiple Grafana/Prometheus/Alertmanager in a cluster #1198

16.17.10 TiDB 3.0.11 Release Notes

Release date: March 4, 2020

TiDB version: 3.0.11

TiDB Ansible version: 3.0.11

> **Warning:**
>
> Some known issues are found in this version, and these issues are fixed in new versions. It is recommended that you use the latest 3.0.x version.

16.17.10.1 Compatibility Changes

- TiDB
  - Add the `max-index-length` configuration item to control the maximum index length, which is compatible with the behavior of TiDB versions before 3.0.7 or of MySQL #15057

16.17.10.2 New Features

- TiDB
  - Support showing the meta information of partitioned tables in the `information_schema.PARTITIONS` table #14849
- TiDB Binlog
  - Support the bidirectional data replication between TiDB clusters #884 #909
- TiDB Lightning
  - Support the TLS configuration #44 #270
- TiDB Ansible
  - Modify the logic of `create_users.yml` so that users of the control machine do not have to be consistent with `ansible_user` #1184

16.17.10.3 Bug Fixes

- TiDB
  - Fix the issue of Goroutine leaks when retrying an optimistic transaction because queries using `Union` are not marked read-only #15076
  - Fix the issue that `SHOW TABLE STATUS` fails to correctly output the table status at the snapshot time because the value of the `tidb_snapshot` parameter is not correctly used when executing the `SET SESSION tidb_snapshot = 'xxx';` statement #14391
  - Fix the incorrect result caused by a SQL statement that contains `Sort Merge Join` and `ORDER BY DESC` at the same time #14664
  - Fix the panic of TiDB server when creating partition tables using the unsupported expression. The error information `This partition function is not allowed` is returned after fixing this panic. #14769
  - Fix the incorrect result occurred when executing the `select max()from subquery` statement with the subquery containing `Union` #14944
  - Fix the issue that an error message is returned when executing the `SHOW BINDINGS` statement after executing `DROP BINDING` that drops the execution binding #14865

  - Fix the issue that the connection is broken because the maximum length of an alias in a query is 256 characters in the MySQL protocol, but TiDB does not cut the alias in the query results according to this protocol #14940
  - Fix the incorrect query result that might occur when using the string type in `DIV`. For instance, now you can correctly execute the `select 1 / '2007' div 1` statement #14098

- TiKV

  - Optimize the log output by removing unnecessary logs #6657
  - Fix the panic that might occur when the peer is removed under high loads #6704
  - Fix the issue that Hibernate Regions are not waken up in some cases #6732 #6738

- TiDB Ansible

  - Update outdated document links in `tidb-ansible` #1169
  - Fix the issue that undefined variables might occur in the `wait for region replication complete` task #1173

16.17.11 TiDB 3.0.10 Release Notes

Release date: February 20, 2020

TiDB version: 3.0.10

TiDB Ansible version: 3.0.10

> **Warning:**
>
> Some known issues are found in this version, and these issues are fixed in new versions. It is recommended that you use the latest 3.0.x version.

16.17.11.1 TiDB

- Fix wrong `Join` results when `IndexLookUpJoin` uses `OtherCondition` to construct `InnerRange` #14599
- Delete the `tidb_pprof_sql_cpu` configuration item and add the `tidb_pprof_sql_cpu` variable #14416
- Fix the issue that users can query all databases only when they have global privileges #14386
- Fix the issue that data visibility does not meet expectations due to transaction timeout when executing `PointGet` operations #14480
- Change the timing of pessimistic transaction activation to delayed activation, consistent with the optimistic transaction mode #14474

- Fix the incorrect time zone results when the `unixtimestamp` expression calculates the time zone of the table partitions #14476
- Add the `tidb_session_statement_deadlock_detect_duration_seconds` monitoring item to monitor deadlock detection duration #14484
- Fix the system panic issue caused by some logic errors of GC workers #14439
- Correct the expression name of the `IsTrue` function #14516
- Fix the issue that some memory usage is counted inaccurately #14533
- Fix the system panic issue caused by incorrect processing logic during CM-Sketch statistics initialization #14470
- Fix the issue of inaccurate partition pruning when querying partitioned tables #14546
- Fix the issue that the default database name of the SQL statement in SQL bindings is set incorrectly #14548
- Fix the issue that `json_key` is not compatible with MySQL #14561
- Add the feature of automatically updating the statistics of partitioned tables #14566
- Fix the issue that the plan ID changes when the `PointGet` operation is executed (the plan ID is expected to be `1` always) #14595
- Fix the system panic issue caused by incorrect processing logic when SQL bindings do not match exactly #14263
- Add the `tidb_session_statement_pessimistic_retry_count` monitoring item to monitor the number of retries after the failure to lock pessimistic transactions #14619
- Fix the incorrect privilege check for `show binding` statements #14618
- Fix the issue that the query cannot be killed because the `backoff` logic does not include checking the `killed` tag #14614
- Improve the performance of statement summary by reducing the time to hold internal locks #14627
- Fix the issue that TiDB's result of parsing strings to time is incompatible with MySQL #14570
- Record the user login failures in audit logs #14620
- Add the `tidb_session_ statement_lock_keys_count` monitoring item to monitor the number of lock keys for pessimistic transactions #14634
- Fix the issue that characters in JSON such as `&`, `<`, and `>` are incorrectly escaped #14637
- Fix the system panic issue caused by excessive memory usage when the `HashJoin` operation is building a hash table #14642
- Fix the panic issue caused by incorrect processing logic when an SQL binding processes illegal records #14645
- ix a MySQL incompatibility issue by adding Truncated error detection to decimal division calculation #14673
- Fix the issue of successfully granting users privileges on a table that does not exist #14611

16.17.11.2 TiKV

- Raftstore

  - Fix the system panic issue #6460 or data loss issue #598 caused by Region merge failure #6481
  - Support `yield` to optimize scheduling fairness, and support pre-transfering the leader to improve leader scheduling stability #6563

16.17.11.3 PD

- Fix the invalid cache issue by supporting automatically updating the Region cache information when the system traffic changes #2103
- Use leader lease time to determine TSO service validity #2117

16.17.11.4 Tools

- TiDB Binlog
  - Support relay log in Drainer #893
- TiDB Lightning
  - Make some configuration items use default values when a config file is missing #255
  - Fix the issue that the web interface cannot be opened in the non-server mode #259

16.17.11.5 TiDB Ansible

- Fix the issue that the command execution fails due to the failure to obtain PD leader in some scenarios #1121
- Add the `Deadlock Detect Duration` monitoring item in the TiDB dashboard #1127
- Add the `Statement Lock Keys Count` monitoring item in the TiDB dashboard #1132
- Add the `Statement Pessimistic Retry Count` monitoring item in the TiDB dashboard #1133

16.17.12 TiDB 3.0.9 Release Notes

Release date: January 14, 2020

TiDB version: 3.0.9

TiDB Ansible version: 3.0.9

> **Warning:**
>
> Some known issues are found in this version, and these issues are fixed in new versions. It is recommended that you use the latest 3.0.x version.

16.17.12.1 TiDB

- Executor
  - Fix the incorrect result when the aggregate function is applied to the `ENUM` column and the collection column #14364
- Server
  - Support the `auto_increment_increment` and `auto_increment_offset` system variables #14396
  - Add the `tidb_tikvclient_ttl_lifetime_reach_total` monitoring metric to monitor the number of pessimistic transactions with a TTL of 10 minutes #14300
  - Output the SQL information in the log when the SQL query causes a panic during its execution #14322
  - Add the `plan` and `plan_digest` fields in the statement summary table to record the `plan` that is being executed and the `plan` signature #14285
  - Adjust the default value of the `stmt-summary.max-stmt-count` configuration item from `100` to `200` #14285
  - Add the `plan_digest` field in the slow query table to record the `plan` signature #14292
- DDL
  - Fix the issue that the results of anonymous indexes created using `alter table ... add index` on the `primary` column is inconsistent with MySQL #14310
  - Fix the issue that `VIEW`s are mistakenly dropped by the `drop table` syntax #14052
- Planner
  - Optimize the performance of statements such as `select max(a), min(a) from t`. If an index exists in the `a` column, the statement is optimized to `select * from (select a from t order by a desc limit 1)as t1, (select a from t order by a limit 1)as t2` to avoid full table scan #14410

16.17.12.2 TiKV

- Raftstore
  - Speed up the configuration change to speed up the Region scattering #6421
- Transaction
  - Add the `tikv_lock_manager_waiter_lifetime_duration`, `tikv_lock_manager_detect_dura` , and `tikv_lock_manager_detect_duration` monitoring metrics to monitor `waiter`s' lifetime, the time cost of detecting deadlocks, and the status of `Wait` table #6392

  - Optimize the following configuration items to reduce transaction execution latency caused by changing Region leader or the leader of deadlock detector in extreme situations #6429
    * Change the default value of `wait-for-lock-time` from `3s` to `1s`
    * Change the default value of `wake-up-delay-duration` from `100ms` to `20ms`
  - Fix the issue that the leader of the deadlock detector might be incorrect during the Region Merge process #6431

16.17.12.3 PD

- Support using backlash `/` in the location label name #2083
- Fix the incorrect statistics because the tombstone store is mistakenly included by the label counter #2067

16.17.12.4 Tools

- TiDB Binlog
  - Add the unique key information in the binlog protocol output by Drainer #862
  - Support using the encrypted password for database connection for Drainer #868

16.17.12.5 TiDB Ansible

- Support automatically creating directories to optimize the deployment of TiDB Lightning #1105

16.17.13 TiDB 3.0.8 Release Notes

Release date: December 31, 2019

TiDB version: 3.0.8

TiDB Ansible version: 3.0.8

16.17.13.1 TiDB

- SQL Optimizer
  - Fix the wrong SQL binding plan caused by untimely cache updates #13891
  - Fix the issue that the SQL binding might be invalid when an SQL statement contains a symbol list #14004
  - Fix the issue that an SQL binding cannot be created or deleted because an SQL statement ends with `;` #14113

  - Fix the issue that a wrong SQL query plan might be selected because the `PhysicalUnionScan` operator sets wrong statistics #14133
  - Remove the `minAutoAnalyzeRatio` restriction to make `autoAnalyze` more timely #14015

- SQL Execution Engine

  - Fix issues that the `INSERT/REPLACE/UPDATE ... SET ... = DEFAULT` syntax might report an error and combining the usage of the `DEFAULT` expression with a virtual generated column might report an error #13682
  - Fix the issue that the `INSERT` statement might report an error when converting a string to a float #14011
  - Fix the issue that sometimes the aggregate operation is low effective because the concurrency value of the `HashAgg` executor is incorrectly initialized #13811
  - Fix the issue that an error is reported in the execution of`group by item` when the clause is in the parentheses #13658
  - Fix the issue that the execution of `OUTER JOIN` might report an error because TiDB incorrectly calculates `group by item` #14014
  - Fix the issue that the error message is inaccurate when Range-exceeding data is written into Range partitioned tables #14107
  - Revert PR #10124 and cancel the `PadCharToFullLength` effect to avoid unexpected query results in special cases, considering that MySQL 8 will discard `PadCharToFullLength` soon #14157
  - Fix the goroutine leak issue when executing the `EXPLAIN ANALYZE` statement caused by unguaranteed `close()` calling in `ExplainExec` #14226

- DDL

  - Optimize the error message output of `change column`/`modify column` to make it easier to understand #13796
  - Add the `SPLIT PARTITION TABLE` syntax to support splitting Regions for partitioned tables #13929
  - Fix the issue that the index length exceeds 3072 bytes and no error is reported because the index length is incorrectly checked when an index is created #13779
  - Fix the issue that the `GC life time is shorter than transaction duration` error message might be reported because it takes too much time to add an index in partitioned tables #14132
  - Fix the panic when `SELECT * FROM information_schema.KEY_COLUMN_USAGE` is executed because the foreign key is not checked when `DROP COLUMN`/`MODIFY COLUMN`/`CHANGE COLUMN` is executed #14105

- Server

  - Statement Summary improvements:
    * Add a large number of SQL metric fields to facilitate analyzing SQL statements in more detail #14151, #14168

    * Add the `stmt-summary.refresh-interval` parameter to control whether to move the stale data from the `events_statements_summary_by_digest` table to the `events_statements_summary_by_digest_history` table (the default interval: 30 minutes) #14161
    * Add the `events_statements_summary_by_digest_history` table to save the stale data in `events_statements_summary_by_digest` #14166
- Fix the issue that the binlog is incorrectly output when RBAC-related internal SQL statements are executed #13890
- Add the `server-version` configuration item to control the feature of modifying the TiDB server version #13906
- Add the feature of using the HTTP interface to recover writing the TiDB binlog #13892
- Update the privilege required by `GRANT roles TO user` from `GrantPriv` to `ROLE_ADMIN` or `SUPER`, to keep consistency with the MySQL behavior #13932
- Modify the TiDB behavior from using the current database to reporting the `No database selected` error when the `GRANT` statement does not specify a database name, to keep compatibility with the MySQL behavior #13784
- Modify the execution privilege for the `REVOKE` statement from `SuperPriv` to `REVOKE` being executable only if the user has the privilege for the corresponding schema, to keep consistency with the MySQL behavior #13306
- Fix the issue that `GrantPriv` is mistakenly granted to the target user when the `GRANT ALL` syntax does not contain `WITH GRANT OPTION` #13943
- Fix the issue that the error message does not contain the cause for the `LOAD DATA` statement's wrong behavior when `LoadDataInfo` fails to call `addRecord` #13980
- Fix the issue that wrong slow query information is output because multiple SQL statements in a query share the same `StartTime` #13898
- Fix the issue that the memory might leak when `batchClient` processes a large transaction #14032
- Fix the issue that `system_time_zone` is always displayed as `CST` and now TiDB's `system_time_zone` is obtained from `systemTZ` in the `mysql.tidb` table #14086
- Fix the issue that the `GRANT ALL` syntax does not grant all privileges to the user #14092
- Fix the issue that the `Priv_create_user` privilege is invalid for `CREATE ROLE` and `DROP ROLE` #14088
- Modify the error code of `ErrInvalidFieldSize` from `1105(Unknow Error)` to `3013` #13737
- Add the `SHUTDOWN` command to stop a TiDB server and add the `ShutdownPriv` privilege #14104
- Fix the atomicity issue for the `DROP ROLE` statement to avoid some roles being deleted unexpectedly when TiDB fails to execute a statement #14130
- Fix the issue that the `tidb_enable_window_function` in the `SHOW VARIABLE` result incorrectly outputs `1` when a TiDB version is upgraded to 3.0, and replace the wrong result with `0` #14131
- Fix the issue that the goroutine might leak because `gcworker` continuously retries

when the TiKV node is offline #14106
  - Record the binlog `Prewrite` time in the slow query log to improve the usability for issue tracking #14138
  - Make the `tidb_enable_table_partition` variable support `GLOBAL SCOPE` #14091
  - Fix the issue that the user privilege might be missing or mistakenly added because the newly added privilege is not correctly granted to the corresponding user when a new privilege is added #14178
  - Fix the issue that the `CheckStreamTimeoutLoop` goroutine might leak because `rpcClient` does not close when the TiKV server is disconnected #14227
  - Support certificate-based authentication (User document) #13955

- Transaction
  - Update the default value of the `tidb_txn_mode` variable from `""` to `"pessimistic ↪ "` when a new cluster is created #14171
  - Fix the issue that the lock waiting time is too long for a pessimistic transaction because the lock waiting time for a single statement is not reset when a transaction is retried #13990
  - Fix the issue that wrong data might be read because unmodified data is unlocked for the pessimistic transaction mode #14050
  - Fix repeated insert value restriction checks because transaction types are not distinguished when prewrite is performed in mocktikv #14175
  - Fix the panic because transactions are not correctly handled when `session. ↪ TxnState` is `Invalid` #13988
  - Fix the issue that the `ErrConfclit` structure in mocktikv does not contain `ConflictCommitTS` #14080
  - Fix the issue that the transaction is blocked because TiDB does not correctly check lock timeout after resolving the lock #14083

- Monitor
  - Add the `pessimistic_lock_keys_duration` monitoring item in `LockKeys` #14194

16.17.13.2 TiKV

- Coprocessor
  - Modify the level of the output log from `error` to `warn` when an error occurs in Coprocessor #6051
  - Modify the update behavior of statistics sampling data from directly updating the row to deleting before inserting, to keep consistency with the update behavior of tidb-server #6069

- Raftstore

  - Fix the panic caused by repeatedly sending the `destroy` message to `peerfsm` and `peerfsm` being destroyed multiple times #6297
  - Update the default value of `split-region-on-table` from `true` to `false` to disable splitting Regions by table by default #6253

- Engine

  - Fix the issue that empty data might be returned because RocksDB iterator errors are not correctly processed in extreme conditions #6326

- Transaction

  - Fix the issue that TiKV fails to write data into keys and GC is blocked because the pessimistic locks are incorrectly cleaned up #6354
  - Optimize the pessimistic lock waiting mechanism to improve the performance in scenarios where the lock conflict is severe #6296

- Update the default value of `tikv_alloc` from `tikv_alloc/default` to `jemalloc` #6206

16.17.13.3 PD

- Client

  - Support using `context` to create a client and setting the timeout duration when creating a new client #1994
  - Support creating the `KeepAlive` connection #2035

- Optimize the performance for the `/api/v1/regions` API #1986
- Fix the issue that deleting stores in a `tombstone` state might cause a panic #2038
- Fix the issue that overlapped Regions are mistakenly deleted when loading the Region information from disks #2011, #2040
- Upgrade etcd from v3.4.0 to v3.4.3 (note that after upgrading you can only degrade etcd using pd-recover) #2058

16.17.13.4 Tools

- TiDB Binlog

  - Fix the issue that the binlog is ignored because Pump does not receive the DDL committed binlog #853

16.17.13.5 TiDB Ansible

- Revert the simplified configuration item #1053
- Optimize the logic for checking the TiDB version when performing a rolling update #1056

- Upgrade TiSpark to v2.1.8 #1061
- Fix the issue that the PD role monitoring item is wrongly displayed on Grafana #1065
- Optimize `Thread Voluntary Context Switches` and `Thread Nonvoluntary Context Switches` monitoring items on the TiKV Detail page on Grafana #1071

16.17.14 TiDB 3.0.7 Release Notes

Release date: December 4, 2019

TiDB version: 3.0.7

TiDB Ansible version: 3.0.7

16.17.14.1 TiDB

- Fix the issue that the lock TTL's value is too large because the TiDB server's local time is behind PD's timestamp #13868
- Fix the issue that the timezone is incorrect after parsing the date from strings using `gotime.Local` #13793
- Fix the issue that the result might be incorrect because the `binSearch` function does not return an error in the implementation of `builtinIntervalRealSig` #13767
- Fix the issue that data is incorrect because the precision is lost when an integer is converted to an unsigned floating point or decimal type #13755
- Fix the issue that the result is incorrect because the `not null` flag is not properly reset when the `USING` clause is used in Natural Outer Join and Outer Join #13739
- Fix the issue that the statistics are not accurate because a data race occurs when statistics are updated #13687

16.17.14.2 TiKV

- Make the deadlock detector only observe valid Regions to make sure the deadlock manager is in a valid Region #6110
- Fix a potential memory leak issue #6128

16.17.15 TiDB 3.0.6 Release Notes

Release date: November 28, 2019

TiDB version: 3.0.6

TiDB Ansible version: 3.0.6

16.17.15.1 TiDB

- SQL Optimizer
  - Fix the issue that the result is incorrect after the window function AST restores SQL text, for example, `over w` being mistakenly restored to `over (w)` #12933
  - Fix the issue of pushing down `STREAM AGG()` to `doubleRead` #12690
  - Fix the issue that quotes are incorrectly handled for SQL binding #13117
  - Optimize the `select max(_tidb_rowid)from t` scenario to avoid full table scans #13095
  - Fix the issue that the query result is incorrect when the query statement contains a variable assignment expression #13231
  - Fix the issue that the result is incorrect when the `UPDATE` statement contains both a sub-query and a generated column; fix the `UPDATE` statement execution error when this statement contains two same-named tables from different source databases #13350
  - Support `_tidb_rowid` for point queries #13416
  - Fix the issue that the generated query execution plan is incorrect, caused by incorrect usage of partitioned table statistics #13628
- SQL Execution Engine
  - Fix the issue that TiDB is incompatible with MySQL when handling invalid values of the year type #12745
  - Reuse `Chunk` in the `INSERT ON DUPLICATE UPDATE` statement to reduce the memory overhead #12998
  - Add the support for the `JSON_VALID` built-in function #13133
  - Support executing `ADMIN CHECK TABLE` on partitioned tables #13140
  - Fix the panic issue when `FAST ANALYZE` is executed on empty tables #13343
  - Fix the panic issue when executing `FAST ANALYZE` on an empty table that contains multi-column indexes #13394
  - Fix the issue that the estimated number of rows is greater than 1 when the `WHERE` clause contains an equal condition on the unique key #13382
  - Fix the issue that the returned data might be duplicated when `Streaming` is enabled in TiDB #13254
  - Extract the top N values from the count-min sketch to improve the estimation accuracy #13429
- Server
  - Make requests sent to TiKV fail quickly when the gRPC dial times out #12926
  - Add the following virtual tables: #13009
    * `performance_schema.tidb_profile_allocs`
    * `performance_schema.tidb_profile_block`
    * `performance_schema.tidb_profile_cpu`
    * `performance_schema.tidb_profile_goroutines`

  - Fix the issue that the `kill` command does not work when the query is waiting for pessimistic locking #12989
  - Do not do asynchronous rollback when acquiring pessimistic locking fails and the transaction only involves modifying a single key #12707
  - Fix the panic issue when the response for the request of splitting Regions is empty #13092
  - Avoid unnecessary backoff when `PessimisticLock` returns a locking error #13116
  - Modify the TiDB behavior for checking configurations by printing a warning log for unrecognized configuration option #13272
  - Support obtaining the binlog status of all TiDB nodes via the `/info/all` interface #13187
  - Fix the issue that goroutine might leak when TiDB kills connections #13251
  - Make the `innodb_lock_wait_timeout` parameter work in pessimistic transactions to control the lock wait timeout for pessimistic locking #13165
  - Stop updating pessimistic transaction TTL when pessimistic transactional queries are killed to prevent other transactions from waiting unnecessarily #13046

- DDL

  - Fix the issue that the execution result of `SHOW CREATE VIEW` in TiDB is inconsistent with that in MySQL #12912
  - Support creating `View` based on `union`, for example, `create view v as select * from t1 union select * from t2` #12955
  - Add more transaction-related fields for the `slow_query` table: #13072
    * `Prewrite_time`
    * `Commit_time`
    * `Get_commit_ts_time`
    * `Commit_backoff_time`
    * `Backoff_types`
    * `Resolve_lock_time`
    * `Local_latch_wait_time`
    * `Write_key`
    * `Write_size`
    * `Prewrite_region`
    * `Txn_retry`
  - Use the table's `COLLATE` instead of the system's default charset in the column when a table is created and the table contains `COLLATE` #13174
  - Limit the length of the index name when creating a table #13310
  - Fix the issue that the table name length is not checked when a table is renamed #13346
  - Add the `alter-primary-key` configuration (disabled by default) to support adding/dropping the primary key in TiDB #13522

16.17.15.2 TiKV

- Fix the issue that the `acquire_pessimistic_lock` interface returns a wrong `txn_size` #5740
- Limit the writes for GC worker per second to reduce the impact on the performance #5735
- Make `lock_manager` accurate #5845
- Support `innodb_lock_wait_timeout` for pessimistic locking #5848
- Add the configuration check for Titan #5720
- Support using tikv-ctl to dynamically modify the GC I/O limit: `tikv-ctl --host=ip:port modify-tikv-config -m server -n gc.max_write_bytes_per_sec -v 10MB` #5957
- Reduce useless `clean up` requests to decrease the pressure on the deadlock detector #5965
- Avoid reducing TTL in pessimistic locking prewrite requests #6056
- Fix the issue that a missing blob file might occur in Titan #5968
- Fix the issue that `RocksDBOptions` might not take effect in Titan #6009

16.17.15.3 PD

- Add an `ActOn` dimension for each filter to indicate that each scheduler and checker is affected by the filter, and delete two unused filters: `disconnectFilter` and `rejectLeaderFilter` #1911
- Print a warning log when it takes more than 5 milliseconds to generate a timestamp in PD #1867
- Lower the client log level when passing unavailable endpoint to the client #1856
- Fix the issue that the gRPC message package might exceed the maximum size in the `region_syncer` replication process #1952

16.17.15.4 Tools

- TiDB Binlog
  - Obtain the initial replication timestamp from PD when `initial-commit-ts` is set to "-1" in Drainer #788
  - Decouple Drainer's `Checkpoint` storage from the downstream and support saving `Checkpoint` in MySQL or local files #790
  - Fix the Drainer panic issue caused by using empty values when configuring replication database/table filtering #801
  - Fix the issue that processes get into the deadlock status instead of exiting after a panic occurs because Drainer fails to apply binlog files to the downstream #807
  - Fix the issue that Pump blocks when it exits because of gRPC's `GracefulStop` #817
  - Fix the issue that Drainer fails when it receives a binlog which misses a column during the execution of a `DROP COLUMN` statement in TiDB (v3.0.6 or later) #827
- TiDB Lightning

- Add the `max-allowed-packet` configuration (64 M by default) for the TiDB backend #248

16.17.16 TiDB 3.0.5 Release Notes

Release date: October 25, 2019

TiDB version: 3.0.5

TiDB Ansible version: 3.0.5

16.17.16.1 TiDB

- SQL Optimizer
  - Support boundary checking on Window Functions #12404
  - Fix the issue that `IndexJoin` on the partition table returns incorrect results #12712
  - Fix the issue that the `ifnull` function on the top of the outer join `Apply` operator returns incorrect results #12694
  - Fix the issue of update failure when a subquery was included in the `where` condition of `UPDATE` #12597
  - Fix the issue that outer join was incorrectly converted to inner join when the `cast` function was included in the query conditions #12790
  - Fix incorrect expression passing in the join condition of `AntiSemiJoin` #12799
  - Fix the statistics error caused by shallow copy when initializing statistics #12817
  - Fix the issue that the `str_to_date` function in TiDB returns a different result from MySQL when the date string and the format string do not match #12725
- SQL Execution Engine
  - Fix the panic issue when the `from_unixtime` function handles null #12551
  - Fix the `invalid list index` error reported when canceling DDL jobs #12671
  - Fix the issue that arrays were out of bounds when Window Functions are used #12660
  - Improve the behavior of the `AutoIncrement` column when it is implicitly allocated, to keep it consistent with the default mode of MySQL auto-increment locking ("consecutive" lock mode): for the implicit allocation of multiple `AutoIncrement` IDs in a single-line `Insert` statement, TiDB guarantees the continuity of the allocated values. This improvement ensures that the JDBC `getGeneratedKeys()` method will get the correct results in any scenario. #12602
  - Fix the issue that the query is hanged when `HashAgg` serves as a child node of `Apply` #12766
  - Fix the issue that the `AND` and `OR` logical expressions return incorrect results when it comes to type conversion #12811
- Server

  - Implement the interface function that modifies transaction TTL to help support large transactions later #12397
  - Support extending the transaction TTL as needed (up to 10 minutes) to support pessimistic transactions #12579
  - Adjust the number of times that TiDB caches schema changes and corresponding changed table information from 100 to 1024, and support modification by using the `tidb_max_delta_schema_count` system variable #12502
  - Update the behavior of the `kvrpc.Cleanup` protocol to no longer clean locks of transactions that are not overtime #12417
  - Support logging Partition table information to the `information_schema.tables` table #12631
  - Support modifying the TTL of Region Cache by configuring `region-cache-ttl` #12683
  - Support printing the execution plan compression-encoded information in the slow log. This feature is enabled by default and can be controlled by using the `slow-log-plan` configuration or the `tidb_record_plan_in_slow_log` variable. In addition, the `tidb_decode_plan` function can decode the execution plan column encoded information in the slow log into execution plan information. #12808
  - Support displaying memory usage information in the `information_schema.processlist` table #12801
  - Fix the issue that an error and an unexpected alarm might occur when the TiKV Client judges an idle connection #12846
  - Fix the issue that the `INSERT IGNORE` statement performance is decreased because `tikvSnapshot` does not properly cache the KV results of `BatchGet()` #12872
  - Fix the issue that the TiDB response speed was relatively low because of slow connection to some KV services #12814

- DDL

  - Fix the issue that the `Create Table` operation does not correctly set the Int type default value for the Set column #12267
  - Support multiple `uniques` when creating a unique index in the `Create Table` statement #12463
  - Fix the issue that populating the default value of this column for existing rows might cause an error when adding a Bit type column using `Alter Table` #12489
  - Fix the failure of adding a partition when the Range partitioned table uses a Date or Datetime type column as the partitioning key #12815
  - Support checking the consistency of the partition type and the partition key type when creating a table or adding a partition, for the Range partitioned table with the Date or Datetime type column as the partition key #12792
  - Add a check that the Unique Key column set needs to be greater than or equal to the partitioned column set when creating a Range partitioned table #12718

- Monitor

  - Add the monitoring metrics of Commit and Rollback operations to the `Transaction OPS` dashboard #12505

- Add the monitoring metrics of `Add Index` operation progress #12390

16.17.16.2 TiKV

- Storage
  - Add a new feature of pessimistic transactions: the transaction cleanup interface supports only cleaning up locks whose TTL is outdated #5589
  - Fix the issue that Rollback of the transaction Primary key is collapsed #5646, #5671
  - Fix the issue that under pessimistic locks, point queries might return the previous version data #5634
- Raftstore
  - Reduce message flush operations in Raftstore to improve performance and reduce CPU usage #5617
  - Optimize the cost of obtaining the Region size and estimated number of keys, to reduce heartbeat overhead and CPU usage #5620
  - Fix the issue that Raftstore prints an error log and encounters a panic when getting invalid data #5643
- Engine
  - Enable RocksDB `force_consistency_checks` to improve data safety #5662
  - Fix the issue that concurrent flush operations in Titan might cause data loss #5672
  - Update the rust-rocksdb version to avoid the issue of TiKV crash and restart caused by intra-L0 compaction #5710

16.17.16.3 PD

- Improve the precision of storage occupied by Regions #1782
- Improve the output of the `--help` command #1763
- Fix the issue that the HTTP request fails to redirect after TLS is enabled #1777
- Fix the panic issue occurred when pd-ctl uses the `store shows limit` command #1808
- Improve readability of label monitoring metrics and reset the original leader's monitoring data when the leader switches, to avoid false reports #1815

16.17.16.4 Tools

- TiDB Binlog
  - Fix the issue that `ALTER DATABASE` related DDL operations cause Drainer to exit abnormally #769

  - Support querying the transaction status information for Commit binlog to improve replication efficiency #757
  - Fix the issue that a Pump panic might occur when Drainer's `start_ts` is greater than Pump's largest `commit_ts` #758

- TiDB Lightning

  - Integrate the full logic import feature of Loader and support configuring the backend mode #221

16.17.16.5 TiDB Ansible

- Add the monitoring metrics of adding index speed #986
- Simplify the configuration file content and remove parameters that users do not need to configure #1043c, #998
- Fix the monitoring expression error of performance read and performance write #e90e7
- Update the monitoring display method and the alarm rules of Raftstore CPU usage #992
- Update the TiKV CPU monitoring item in the Overview monitoring dashboard to filter out the excess monitoring content #1001

16.17.17 TiDB 3.0.4 Release Notes

Release date: October 8, 2019

TiDB version: 3.0.4

TiDB Ansible version: 3.0.4

- New features

  - Add the `performance_schema.events_statements_summary_by_digest` system table to troubleshoot performance issues at the SQL level
  - Add the `WHERE` clause in TiDB's `SHOW TABLE REGIONS` syntax
  - Add the `worker-count` and `txn-batch` configuration items in Reparo to control the recovery speed

- Improvements

  - Support batch Region split command and empty split command in TiKV to improve split performance
  - Support double linked list for RocksDB in TiKV to improve performance of reverse scan
  - Add two perf tools `iosnoop` and `funcslower` in TiDB Ansible to better diagnose the cluster state
  - Optimize the output of slow query logs in TiDB by deleting redundant fields

- Changed behaviors

  - Update the default value of `txn-local-latches.enable` to `false` to disable the default behavior of checking conflicts of local transactions in TiDB
  - Add the `tidb_txn_mode` system variable of global scope in TiDB and allow using the pessimistic lock; note that TiDB still adopts the optimistic lock by default
  - Replace the `Index_ids` field in TiDB slow query logs with `Index_names` to improve the usability of slow query logs
  - Add the `split-region-max-num` parameter in the TiDB configuration file to modify the maximum number of Regions allowed in the `SPLIT TABLE` syntax
  - Return the `Out Of Memory Quota` error instead of disconnecting the link when a SQL execution exceeds the memory limit
  - Disallow dropping the `AUTO_INCREMENT` attribute of columns in TiDB to avoid misoperations. To drop this attribute, change the `tidb_allow_remove_auto_inc` system variable

- Fixed issues

  - Fix the issue that the uncommented TiDB-specific syntax `PRE_SPLIT_REGIONS` might cause errors in the downstream database during data replication
  - Fix the issue in TiDB that the slow query logs are incorrect when getting the result of `PREPARE` + `EXECUTE` by using the cursor
  - Fix the issue in PD that adjacent small Regions cannot be merged
  - Fix the issue in TiKV that file descriptor leak in idle clusters might cause TiKV processes to exit abnormally when the processes run for a long time

- Contributors

  Our thanks go to the following contributors from the community for helping this release:

  - sduzh
  - lizhenda

16.17.17.1 TiDB

- SQL Optimizer

  - Fix the issue that invalid query ranges might be resulted when splitted by feedback #12170
  - Display the returned error of the `SHOW STATS_BUCKETS` statement in hexadecimal rather than return errors when the result contains invalid Keys #12094
  - Fix the issue that when a query contains the `SLEEP` function (for example, `select 1 from (select sleep(1))t;`), column pruning causes invalid `sleep(1)` during query #11953
  - Use index scan to lower IO when a query only concerns the number of columns rather than the table data #12112

  - Do not use any index when no index is specified in `use index()` to be compatible with MySQL #12100
  - Strictly limit the number of `TopN` records in the `CMSketch` statistics to fix the issue that the `ANALYZE` statement fails because the statement count exceeds TiDB's limit on the size of a transaction #11914
  - Fix the error occurred when converting the subqueries contained in the `Update` statement #12483
  - Optimize execution performance of the `select ... limit ... offset ...` statement by pushing the Limit operator down to the `IndexLookUpReader` execution logic #12378

- SQL Execution Engine

  - Print the SQL statement in the log when the `PREPARED` statement is incorrectly executed #12191
  - Support partition pruning when the `UNIX_TIMESTAMP` function is used to implement partitioning #12169
  - Fix the issue that no error is reported when `AUTO_INCREMENT` incorrectly allocates `MAX int64` and `MAX uint64` #12162
  - Add the `WHERE` clause in the `SHOW TABLE ⋯ REGIONS` and `SHOW TABLE .. INDEX ⋯ REGIONS` syntaxes #12123
  - Return the `Out Of Memory Quota` error instead of disconnecting the link when a SQL execution exceeds the memory limit #12127
  - Fix the issue that incorrect result is returned when `JSON_UNQUOTE` function handles JSON text #11955
  - Fix the issue that `LAST INSERT ID` is incorrect when assigning values to the `AUTO_INCREMENT` column in the first row (for example, `insert into t (pk, c)values (1, 2), (NULL, 3)`) #12002
  - Fix the issue that the `GROUPBY` parsing rule is incorrect in the `PREPARE` statement #12351
  - Fix the issue that the privilege check is incorrect in the point queries #12340
  - Fix the issue that the duration by `sql_type` for the `PREPARE` statement is not shown in the monitoring record #12331
  - Support using aliases for tables in the point queries (for example, `select * from t tmp where a = "aa"`) #12282
  - Fix the error occurred when not handling negative values as unsigned when inserting negative numbers into BIT type columns #12423
  - Fix the incorrectly rounding of time (for example, `2019-09-11 11:17:47.999999666` should be rounded to `2019-09-11 11:17:48`.) #12258
  - Refine the usage of expression blocklist (for example, `<` is equivalent to `lt`.) #11975
  - Add the database prefix to the message of non-existing function error (for example, `[expression:1305]FUNCTION test.std_samp does not exist`) #12111

- Server

  - Add the `Prev_stmt` field in slow query logs to output the previous statement

when the last statement is `COMMIT` #12180
  - Optimize the output of slow query logs by deleting redundant fields #12144
  - Update the default value of `txn-local-latches.enable` to `false` to disable the default behavior of checking conflicts of local transactions in TiDB #12095
  - Replace the `Index_ids` field in TiDB slow query logs with `Index_names` to improve the usability of slow query logs #12061
  - Add the `tidb_txn_mode` system variable of global scope in TiDB and allow using pessimistic lock #12049
  - Add the `Backoff` field in the slow query logs to record the Backoff information in the commit phase of 2PC #12335
  - Fix the issue that the slow query logs are incorrect when getting the result of `PREPARE` + `EXECUTE` by using the cursor (for example, `PREPARE stmt1FROM ↪ SELECT * FROM t WHERE a > ?; EXECUTE stmt1 USING @variable`) #12392
  - Support `tidb_enable_stmt_summary`. When this feature is enabled, TiDB counts the SQL statements and the result can be queried by using the system table `performance_schema.events_statements_summary_by_digest` #12308
  - Adjust the level of some logs in tikv-client (for example, change the log level of `batchRecvLoop fails` from `ERROR` to `INFO`) #12383

- DDL
  - Add the `tidb_allow_remove_auto_inc` variable. Dropping the `AUTO INCREMENT` attribute of the column is disabled by default #12145
  - Fix the issue that the uncommented TiDB-specific syntax `PRE_SPLIT_REGIONS` might cause errors in the downstream database during data replication #12120
  - Add the `split-region-max-num` variable in the configuration file so that the maximum allowable number of Regions is adjustable #12097
  - Support splitting a Region into multiple Regions and fix the timeout issue during Region scatterings #12343
  - Fix the issue that the `drop index` statement fails when the index that contains an `AUTO_INCREMENT` column referenced by two indexes #12344

- Monitor
  - Add the `connection_transient_failure_count` monitoring metrics to count the number of gRPC connection errors in `tikvclient` #12093

16.17.17.2 TiKV

- Raftstore
  - Fix the issue that Raftstore inaccurately counts the number of keys in empty Regions #5414
  - Support double linked list for RocksDB to improve the performance of reverse scan #5368

  - Support batch Region split command and empty split command to improve split performance #5470

- Server
  - Fix the issue that the output format of the `-V` command is not consistent with the format of 2.X #5501
  - Upgrade Titan to the latest version in the 3.0 branch #5517
  - Upgrade grpcio to v0.4.5 #5523
  - Fix the issue of gRPC coredump and support shared memory to avoid OOM #5524
  - Fix the issue in TiKV that file descriptor leak in idle clusters might cause TiKV processes to exit abnormally when the processes run for a long time #5567

- Storage
  - Support the `txn_heart_beat` API to make the pessimistic lock in TiDB consistent with that in MySQL as much as possible #5507
  - Fix the issue that the performance of point queries is low in some situations #5495 #5463

16.17.17.3 PD

- Fix the issue that adjacent small Regions cannot be merged #1726
- Fix the issue that the TLS enabling parameter in `pd-ctl` is invalid #1738
- Fix the thread-safety issue that the PD operator is accidentally removed #1734
- Support TLS for Region syncer #1739

16.17.17.4 Tools

- TiDB Binlog
  - Add the `worker-count` and `txn-batch` configuration items in Reparo to control the recovery speed #746
  - Optimize the memory usage of Drainer to enhance the efficiency of simultaneous execution #737

- TiDB Lightning
  - Fix the issue that re-importing data from checkpoint might cause TiDB Lightning to panic #237
  - Optimize the algorithm of `AUTO_INCREMENT` to reduce the risk of overflowing `AUTO_INCREMENT` columns #227

16.17.17.5 TiDB Ansible

- Upgrade TiSpark to v2.2.0 #926
- Update the default value of the TiDB configuration item `pessimistic_txn` to `true` #933
- Add more system-level monitoring metrics to `node_exporter` #938
- Add two perf tools `iosnoop` and `funcslower` in TiDB Ansible to better diagnose the cluster state #946
- Replace the raw module to shell module to address the long waiting time in such situations as the password expires #949
- Update the default value of the TiDB configuration item `txn_local_latches` to `false`
- Optimize the monitoring metrics and alert rules of Grafana dashboard #962 #963 #969
- Check the configuration file before the deployment and upgrade #934 #972

16.17.18 TiDB 3.0.3 Release Notes

Release date: August 29, 2019

TiDB version: 3.0.3

TiDB Ansible version: 3.0.3

16.17.18.1 TiDB

- SQL Optimizer
  - Add the `opt_rule_blacklist` table to disable logic optimization rules such as `aggregation_eliminate` and `column_prune` #11658
  - Fix the issue that incorrect results might be returned for `Index Join` when the join key uses a prefix index or an unsigned index column that is equal to a negative value #11759
  - Fix the issue that `"` or `\` in the `SELECT` statements of `create ··· binding ...` might result in parsing errors #11726
- SQL Execution Engine
  - Fix the issue that type errors in the return value might occur when the Quote function handles a null value #11619
  - Fix the issue that incorrect results for `ifnull` might be returned when Max/Min is used for type inferring with `NotNullFlag` retained #11641
  - Fix the potential error that occurs when comparing bit type data in string form #11660
  - Decrease the concurrency for data that requires sequential read to lower the possibility of OOM #11679

  - Fix the issue that incorrect type inferring might be caused when multiple parameters are unsigned for some built-in functions (for example, `if` and `coalesce`) #11621
  - Fix the incompatibility with MySQL when the `Div` function handles unsigned decimal types #11813
  - Fix the issue that panic might occur when executing SQL statements that modify the status of Pump/Drainer #11827
  - Fix the issue that panic might occur for `select ... for update` when Autocommit = 1 and there is no `begin` statement #11736
  - Fix the permission check error that might occur when the `set default role` statement is executed #11777
  - Fix the permission check error that might occur when `create user` or `drop user` is executed #11814
  - Fix the issue that the `select ... for update` statement might auto retry when it is constructed into the `PointGetExecutor` function #11718
  - Fix the boundary error that might occur when the Window function handles partition #11825
  - Fix the issue that the `time` function hits EOF errors when handling an incorrectly formatted argument #11893
  - Fix the issue that the Window function does not check the passed-in parameters #11705
  - Fix the issue that the plan result viewed via `Explain` is inconsistent with the actually executed plan #11186
  - Fix the issue that duplicate memory referenced by the Window function might result in a crash or incorrect results #11823
  - Update the incorrect information in the `Succ` field in the slow log #11887

- Server
  - Rename the `tidb_back_off_wexight` variable to `tidb_backoff_weight` #11665
  - Update the minimum TiKV version compatible with the current TiDB to v3.0.0 #11618
  - Support `make testSuite` to ensure the suites in the test are correctly used #11685

- DDL
  - Skip the execution of unsupported partition-related DDL statements, including statements that modify the partition type while deleting multiple partitions #11373
  - Disallow a Generated Column to be placed before its dependent columns #11686
  - Modify the default values of `tidb_ddl_reorg_worker_cnt` and `tidb_ddl_reorg_batch_size` ↪ #11874

- Monitor
  - Add new backoff monitoring types to record duration for each backoff type; add more backoff metrics to cover previously uncounted types such as commit backoff

#11728

16.17.18.2 TiKV

- Fix the issue that ReadIndex might fail to respond to requests because of duplicate context #5256
- Fix potential scheduling jitters caused by premature `PutStore` #5277
- Fix incorrect timestamps reported from Region heartbeats #5296
- Reduce the size of core dump by excluding the shared block cache from it #5322
- Fix potential TiKV panics during region merge #5291
- Speed up leader change check for the dead lock detector #5317
- Support using `grpc env` to create deadlock clients #5346
- Add `config-check` to check whether the configuration is correct #5349
- Fix the issue that ReadIndex does not return anything when there is no leader #5351

16.17.18.3 PD

- Return success message for `pdctl` #1685

16.17.18.4 Tools

- TiDB Binlog
  - Modify the default value of `defaultBinlogItemCount` in Drainer from 65536 to 512 to reduce the chance of OOM on Drainer startup #721
  - Optimize the offline logic for pump server to avoid potential offline congestions #701
- TiDB Lightning:
  - Skip the system databases `mysql`, `information_schema`, `performance_schema`, and `sys` by default when importing #225

16.17.18.5 TiDB Ansible

- Optimize PD operations for rolling update to improve stability #894
- Remove the Grafana Collector components that are not supported by the current Grafana version #892
- Update TiKV alerting rules #898
- Fix the issue that the generated TiKV configuration misses the `pessimistic-txn` parameter #911
- Update Spark to V2.4.3, and update TiSpark to V2.1.4 that is compatible with Spark V2.4.3 #913, #918

16.17.19 TiDB 3.0.2 Release Notes

Release date: August 7, 2019

TiDB version: 3.0.2

TiDB Ansible version: 3.0.2

16.17.19.1 TiDB

- SQL Optimizer
  - Fix the issue that the "Can't find column in schema" message is reported when the same table occurs multiple times in a query and logically the query result is always empty #11247
  - Fix the issue that the query plan does not meet the expectation caused by the `TIDB_INLJ` hint not working correctly in some cases (like `explain select /*+ TIDB_INLJ(t1)*/ t1.b, t2.a from t t1, t t2 where t1.b = t2.a`) #11362
  - Fix the issue that the column name in the query result is wrong in some cases (like `SELECT IF(1,c,c)FROM t`) #11379
  - Fix the issue that some queries like `SELECT 0 LIKE 'a string'` return `TRUE` because the `LIKE` expression is implicitly converted to 0 in some cases #11411
  - Support sub-queries in the `SHOW` statement, like `SHOW COLUMNS FROM tbl WHERE FIELDS IN (SELECT 'a')` #11459
  - Fix the issue that the related column of the aggregate function cannot be found and an error is reported caused by the `outerJoinElimination` optimizing rule not correctly handling the column alias; improve alias parsing in the optimizing process to make optimization cover more query types #11377
  - Fix the issue that no error is reported when the syntax restriction is violated in the Window function (for example, `UNBOUNDED PRECEDING` is not allowed to appear at the end of the Frame definition) #11543
  - Fix the issue that `FUNCTION_NAME` is in uppercase in the `ERROR 3593 (HY000): You cannot use the window function FUNCTION_NAME in this context` error message, which causes incompatibility with MySQL #11535
  - Fix the issue that the unimplemented `IGNORE NULLS` syntax in the Window function is used but no error is reported #11593
  - Fix the issue that the Optimizer does not correctly estimate time equal conditions #11512
  - Support updating the Top-N statistics based on the feedback information #11507
- SQL Execution Engine
  - Fix the issue that the returned value is not `NULL` when the `INSERT` function contains `NULL` in parameters #11248
  - Fix the issue that the computing result might be wrong when the partitioned table is checked by the `ADMIN CHECKSUM` operation #11266

- Fix the issue that the result might be wrong when INDEX JOIN uses the prefix index #11246
- Fix the issue that result might be wrong caused by incorrectly aligning fractions when the `DATE_ADD` function does subtraction on date numbers involving microseconds #11288
- Fix the wrong result caused by the `DATE_ADD` function incorrectly processing the negative numbers in `INTERVAL` #11325
- Fix the issue that the number of fractional digits returned by `Mod(%)`, `Multiple (*)` or `Minus(-)` is different from that in MySQL when `Mod(%)`, `Multiple(*)` or `Minus(-)` returns 0 and the number of fractional digits is large (like `select 0.000 % 0.11234500000000000000`) #11251
- Fix the issue that `NULL` with a warning is incorrectly returned when the length of the result returned by `CONCAT` and `CONCAT_WS` functions exceeds `max_allowed_packet` #11275
- Fix the issue that `NULL` with a warning is incorrectly returned when parameters in the `SUBTIME` and `ADDTIME` functions are invalid #11337
- Fix the issue that `NULL` is incorrectly returned when parameters in the `CONVERT_TZ` function are invalid #11359
- Add the `MEMORY` column to the result returned by `EXPLAIN ANALYZE` to show the memory usage of this query #11418
- Add `CARTESIAN` Join to the result of `EXPLAIN` #11429
- Fix the incorrect data of auto-increment columns of the float and double types #11385
- Fix the panic issue caused by some `nil` information when pseudo statistics are dumped #11460
- Fix the incorrect query result of `SELECT ⋯ CASE WHEN ⋯ ELSE NULL ...` caused by constant folding optimization #11441
- Fix the issue that `floatStrToIntStr` does not correctly parse the input such as `+999.9999e2` #11473
- Fix the issue that `NULL` is not returned in some cases when the result of the `DATE_ADD` and `DATE_SUB` function overflows #11476
- Fix the issue that the conversion result is different from that in MySQL if the string contains an invalid character when a long string is converted to an integer #11469
- Fix the issue that the result of the `REGEXP BINARY` function is incompatible with MySQL caused by case sensitiveness of this function #11504
- Fix the issue that an error is reported when the `GRANT ROLE` statement receives `CURRENT_ROLE`; fix the issue that the `REVOKE ROLE` statement does not correctly revoke the `mysql.default_role` privilege #11356
- Fix the display format issue of the `Incorrect datetime value` warning information when executing statements like `SELECT ADDDATE('2008-01-34', -1)` #11447
- Fix the issue that the error message reports `constant ⋯ overflows float` rather than `constant ⋯ overflows bigint` if the result overflows when a float field of the JSON data is converted to an integer #11534

  - Fix the issue that the result might be wrong caused by incorrect type conversion when the `DATE_ADD` function receives `FLOAT`, `DOUBLE` and `DECIMAL` column parameters #11527
  - Fix the wrong result caused by incorrectly processing the sign of the INTERVAL fraction in the `DATE_ADD` function #11615
  - Fix the incorrect query result when Index Lookup Join contains the prefix index caused by `Ranger` not correctly handling the prefix index #11565
  - Fix the issue that the "Incorrect arguments to NAME_CONST" message is reported if the `NAME_CONST` function is executed when the second parameter of `NAME_CONST` is a negative number #11268
  - Fix the issue that the result is incompatible with MySQL when an SQL statement involves computing the current time and the value is fetched multiple times; use the same value when fetching the current time for the same SQL statement #11394
  - Fix the issue that `Close` is not called for `ChildExecutor` when the `Close` of `baseExecutor` reports an error. This issue might lead to Goroutine leaks when the `KILL` statements do not take effect and `ChildExecutor` is not closed #11576

- Server

  - Fix the issue that the auto-added value is 0 instead of the current timestamp when `LOAD DATA` processes the missing `TIMESTAMP` field in the CSV file #11250
  - Fix issues that the `SHOW CREATE USER` statement does not correctly check related privileges, and `USER` and `HOST` returned by `SHOW CREATE USER CURRENT_USER()` might be wrong #11229
  - Fix the issue that the returned result might be wrong when `executeBatch` is used in JDBC #11290
  - Reduce printing the log information of the streaming client when changing the TiKV server's port #11370
  - Optimize the logic of reconnecting the streaming client to the TiKV server so that the streaming client will not be blocked for a long time #11372
  - Add `REGION_ID` in `INFORMATION_SCHEMA.TIDB_HOT_REGIONS` #11350
  - Cancel the timeout duration of obtaining Region information from the PD API to ensure that obtaining Region information will not end in a failure when TiDB API `http://{TiDBIP}:10080/regions/hot` is called due to PD timeout when the number of Regions is large #11383
  - Fix the issue that Region related requests do not return partitioned table-related Regions in the HTTP API #11466
  - Make the following changes to reduce the probability of locking timeout caused by slow operations when the user manually validates pessimistic locking #11521:
    * Increase the default TTL of pessimistic locking from 30 seconds to 40 seconds
    * Increase the maximum TTL from 60 seconds to 120 seconds
    * Calculate the pessimistic locking duration from the first `LockKeys` request
  - Change the `SendRequest` function logic in the TiKV client: try to immediately connect to another peer instead of keeping waiting when the connect cannot be built #11531

  - Optimize the Region cache: label the removed store as invalid when a store is moved while another store goes online with a same address, to update the store information in the cache as soon as possible #11567
  - Add the Region ID to the result returned by the `http://{TiDB_ADDRESS:TIDB_IP}/mvcc/key/{db}/{table}/{handle}` API #11557
  - Fix the issue that Scatter Table does not work caused by the Scatter Table API not escaping the Range key #11298
  - Optimize the Region cache: label the store where the Region exists as invalid when the correspondent store is inaccessible, to avoid reduced query performance caused by accessing this store #11498
  - Fix the error that the table schema can still be obtained through the HTTP API after dropping the database with the same name multiple times #11585

- DDL

  - Fix the issue that an error occurs when a non-string column with a zero length is being indexed #11214
  - Disallow modifying the columns with foreign key constraints and full-text indexes (Note: TiDB still supports foreign key constraints and full-text indexes in syntax) #11274
  - Fix the issue that the index offset of the column might be wrong because the position changed by the `ALTER TABLE` statement and the default value of the column are used concurrently #11346
  - Fix two issues that occur when parsing JSON files:
    * `int64` is used as the intermediate parsing result of `uint64` in `ConvertJSONToFloat`, which leads to the precision overflow error #11433
    * `int64` is used as the intermediate parsing result of `uint64` in `ConvertJSONToInt`, which leads to the precision overflow error #11551
  - Disallow dropping indexes on the auto-increment column to avoid that the auto-increment column might get an incorrect result #11399
  - Fix the following issues #11492:
    * The character set and the collation of the column are not consistent when explicitly specifying the collation but not the character set
    * The error is not correctly reported when there is a conflict between the character set and the collation that are specified by `ALTER TABLE ⋯ MODIFY COLUMN`
    * Incompatibility with MySQL when using `ALTER TABLE ⋯ MODIFY COLUMN` to specify character sets and collations multiple times
  - Add the trace details of the subquery to the result of the `TRACE` query #11458
  - Optimize the performance of executing `ADMIN CHECK TABLE` and greatly reduce its execution time #11547
  - Add the result returned by `SPLIT TABLE ⋯ REGIONS/INDEX` and make `TOTAL_SPLIT_REGION` and `SCATTER_FINISH_RATIO` display the number of Regions that have been split successfully before timeout in the result #11484

  - Fix the issue that the precision displayed by statements like `SHOW CREATE TABLE` is incomplete when `ON UPDATE CURRENT_TIMESTAMP` is the column attribute and the float precision is specified #11591
  - Fix the issue that the index result of the column cannot be correctly calculated when the expression of a virtual generated column contains another virtual generated column #11475
  - Fix the issue that the minus sign cannot be added after `VALUE LESS THAN` in the `ALTER TABLE ⋯ ADD PARTITION ⋯` statement #11581

- Monitor
  - Fix the issue that data is not collected and reported because the `TiKVTxnCmdCounter` ↪ monitoring metric is not registered #11316
  - Add the `BindUsageCounter`, `BindTotalGauge` and `BindMemoryUsage` monitoring metrics for the Bind Info #11467

16.17.19.2 TiKV

- Fix the bug that TiKV panics if the Raft log is not written in time #5160
- Fix the bug that the panic information is not written into the log file after TiKV panics #5198
- Fix the bug that the Insert operation might be incorrectly performed in the pessimistic transaction #5203
- Lower the output level of some logs that require no manual intervention to INFO #5193
- Improve the accuracy of monitoring the storage engine size #5200
- Improve the accuracy of the Region size in tikv-ctl #5195
- Improve the performance of the deadlock detector for pessimistic locking #5192
- Improve the performance of GC in the Titan storage engine #5197

16.17.19.3 PD

- Fix the bug that the Scatter Region scheduler cannot work #1642
- Fix the bug that the merge Region operation cannot be performed in pd-ctl #1653
- Fix the bug that the remove-tombstone operation cannot be performed in pd-ctl #1651
- Fix the issue that the Region overlapping with the key scope cannot be found when performing the scan Region operation #1648
- Add the retrying mechanism to make sure that the members are added successfully in PD #1643

16.17.19.4 Tools

TiDB Binlog

- Add the configuration item check feature when starting, which will stop the Binlog service and report an error when an invalid item is found #687

- Add the `node-id` configuration in Drainer to specify a specific logic used by Drainer #684

TiDB Lightning

- Fix the issue that `tikv_gc_life_time` fails to be changed back to its original value when 2 checksums are running at the same time #218
- Add the configuration item check feature when starting, which will stop the Binlog service and report an error when an invalid item is found #217

16.17.19.5 TiDB Ansible

- Fix the unit error that the Disk Performance monitor treats seconds as milliseconds #840
- Add the `log4j` configuration file in Spark #841
- Fix the issue that the Prometheus configuration file is generated in the wrong format when Binlog is enabled and Kafka or ZooKeeper is configured #844
- Fix the issue that the `pessimistic-txn` configuration parameter is left out in the generated TiDB configuration file #850
- Add and optimize metrics on the TiDB Dashboard #853
- Add descriptions for each monitoring item on the TiDB Dashboard #854
- Add the TiDB Summary Dashboard to better view the cluster status and troubleshoot issues #855
- Update the Allocator Stats monitoring item on the TiKV Dashboard #857
- Fix the unit error in the Node Exporter's alerting expression #860
- Upgrade the TiSpark jar package to v2.1.2 #862
- Update the descriptions of the Ansible Task feature #867
- Update the expression of the local reader requests monitoring item on the TiDB Dashboard #874
- Update the expression of the TiKV Memory monitoring item on the Overview Dashboard, and fix the issue of wrongly displayed monitoring #879
- Remove the Binlog support in the Kafka mode #878
- Fix the issue that PD fails to transfer the Leader when executing the `rolling_update` ↪ `.yml` operation #887

16.17.20 TiDB 3.0.1 Release Notes

Release date: July 16, 2019

TiDB version: 3.0.1

TiDB Ansible version: 3.0.1

16.17.20.1 TiDB

- Add support for the `MAX_EXECUTION_TIME` feature #11026
- Add the `tidb_wait_split_region_finish_backoff` session variable to control the backoff time of splitting Regions #11166
- Support automatically adjusting the incremental gap allocated by auto-increment IDs based on the load, and the auto-adjustment scope of the incremental gap is 1000~2000000 #11006
- Add the `ADMIN PLUGINS ENABLE/ADMIN PLUGINS DISABLE` SQL statement to dynamically enable or disable plugins #11157
- Add the session connection information in the Audit plugin #11013
- Change the default behavior during the period of splitting Regions to wait for PD to finish scheduling #11166
- Prohibit Window Functions from being cached in Prepare Plan Cache to avoid incorrect results in some cases #11048
- Prohibit `ALTER` statements from modifying the definition of stored generated columns #11068
- Disallow changing virtual generated columns to stored generated columns #11068
- Disallow changing the generated column expression with indexes #11068
- Support compiling TiDB on the ARM64 architecture #11150
- Support modifying the collation of a database or a table, but the character set of the database/table has to be UTF-8 or utf8mb4 #11086
- Fix the issue that an error is reported when the `SELECT` subquery in the `UPDATE ⋯ SELECT` statement fails to parse the column in the `UPDATE` expression and the column is wrongly pruned #11252
- Fix the panic issue that happens when a column is queried on multiple times and the returned result is NULL during point queries #11226
- Fix the data race issue caused by non-thread safe `rand.Rand` when using the `RAND` function #11169
- Fix the bug that the memory usage of a SQL statement exceeds the threshold but the execution of this statement is not canceled in some cases when `oom-action="cancel"` is configured, and the returned result is incorrect #11004
- Fix the issue that `SHOW PROCESSLIST` shows that the memory usage is not `0` because the memory usage of MemTracker was not correctly cleaned #10970
- Fix the bug that the result of comparing integers and non-integers is not correct in some cases #11194
- Fix the bug that the query result is not correct when the query on table partitions contains a predicate in explicit transactions #11196
- Fix the DDL job panic issue because `infoHandle` might be `NULL` #11022
- Fix the issue that the query result is not correct because the queried column is not referenced in the subquery and is then wrongly pruned when running a nested aggregation query #11020
- Fix the issue that the `Sleep` function does not respond to the `KILL` statement in time #11028

- Fix the issue that the `DB` and `INFO` columns shown by the `SHOW PROCESSLIST` command are incompatible with MySQL #11003
- Fix the system panic issue caused by the `FLUSH PRIVILEGES` statement when `skip-grant-table=true` is configured #11027
- Fix the issue that the primary key statistics collected by `FAST ANALYZE` are not correct when the table primary key is an `UNSIGNED` integer #11099
- Fix the issue that the "invalid key" error is reported by the `FAST ANALYZE` statement in some cases #11098
- Fix the issue that the precision shown by the `SHOW CREATE TABLE` statement is incomplete when `CURRENT_TIMESTAMP` is used as the default value of the column and the float precision is specified #11088
- Fix the issue that the function name is not in lowercase when window functions report an error to make it compatible with MySQL #11118
- Fix the issue that TiDB fails to connect to TiKV and thus cannot provide service after the background thread of TiKV Client Batch gRPC panics #11101
- Fix the issue that the variable is set incorrectly by `SetVar` because of the shallow copy of the string #11044
- Fix the issue that the execution fails and an error is reported when the `INSERT ⋯ ON DUPLICATE` statement is applied on table partitions #11231
- Pessimistic locking (experimental feature)
  - Fix the issue that an incorrect result is returned because of the invalid lock on the row when point queries are run using the pessimistic locking and the returned data is empty #10976
  - Fix the issue that the query result is not correct because `SELECT ⋯ FOR UPDATE` does not use the correct TSO when using the pessimistic locking in the query #11015
  - Change the detection behavior from immediate conflict detection to waiting when an optimistic transaction meets a pessimistic lock to avoid worsening the lock conflict #11051

16.17.20.2 TiKV

- Add the statistics of the size of blob files in statistics information #5060
- Fix the core dump issue caused by the incorrectly cleaned memory resources when the process exits #5053
- Add all monitoring metrics related to the Titan engine #4772, #4836
- Add the number of open file handles for Titan when counting the number of open file handles to avoid the issue that no file handle is available because of inaccurate statistics of file handles #5026
- Set `blob_run_mode` to decide whether to enable the Titan engine on a specific CF #4991
- Fix the issue that the read operations cannot get the commit information of pessimistic transactions #5067

- Add the `blob-run-mode` configuration parameter to control the running mode of the Titan engine, and its value can be `normal`, `read-only` or `fallback` #4865
- Improve the performance of detecting deadlocks #5089

16.17.20.3 PD

- Fix the issue that the scheduling limit is automatically adjusted to 0 when PD schedules hot Regions #1552
- Add the `enable-grpc-gateway` configuration option to enable the gRPC gateway feature of etcd #1596
- Add `store-balance-rate`, `hot-region-schedule-limit` and other statistics related to scheduler configuration #1601
- Optimize the hot Region scheduling strategy and skip the Regions that lack replicas during scheduling to prevent multiple replicas from being scheduled to the same IDC #1609
- Optimize the Region merge processing logic and support giving priority to merging the Regions with smaller sizes to speed up Region merging #1613
- Adjust the default limit of hot Region scheduling in a single time to 64 to prevent too many scheduling tasks from occupying system resources and impacting performance #1616
- Optimize the Region scheduling strategy and support giving high priority to scheduling Regions in the `Pending` status #1617
- Fix the issue that `random-merge` and `admin-merge-region` operators cannot be added #1634
- Adjust the format of the Region key in the log to hexadecimal notation to make it easier to view #1639

16.17.20.4 Tools

TiDB Binlog

- Optimize the Pump GC strategy and remove the restriction that the unconsumed binlog cannot be cleaned to make sure that the resources are not occupied for a long time #646

TiDB Lightning

- Fix the import error that happens when the column names specified by the SQL dump are not in lowercase #210

16.17.20.5 TiDB Ansible

- Add the precheck feature for the ansible command and its `jmespath` and `jinja2` dependency packages #803, #813

- Add the `stop-write-at-available-space` parameter (10 GiB by default) in Pump to stop writing binlog files in Pump when the available disk space is less than the parameter value #806
- Update the I/O monitoring items in the TiKV monitoring information and make them compatible with the monitoring components of the new version #820
- Update the PD monitoring information, and fix the anomaly that Disk Latency is empty in the disk performance dashboard #817
- Add monitoring items for Titan in the TiKV details dashboard #824

16.17.21 TiDB 3.0 GA Release Notes

Release date: June 28, 2019

TiDB version: 3.0.0

TiDB Ansible version: 3.0.0

16.17.21.1 Overview

On June 28, 2019, TiDB 3.0 GA is released. The corresponding TiDB Ansible version is 3.0.0. Compared with TiDB 2.1, this release has greatly improved in the following aspects:

- Stability. TiDB 3.0 has demonstrated long-term stability for large-scale clusters with up to 150+ nodes and 300+ TB of storage.
- Usability. TiDB 3.0 has multi-facet improvements in usability, including standardized slow query logs, well-developed log file specification, and new features such as `EXPLAIN ANALYZE` and SQL Trace to save operation costs for users.
- Performance. The performance of TiDB 3.0 is 4.5 times greater than TiDB 2.1 in TPC-C benchmarks, and over 1.5 times in Sysbench benchmarks. Thanks to the support for Views, TPC-H 50G Q15 can now run normally.
- New features including Window Functions, Views (**Experimental**), partitioned tables, the plugin framework, pessimistic locking (**Experimental**), and `SQL Plan Management`.

16.17.21.2 TiDB

- New Features
  - Support Window Functions; compatible with all window functions in MySQL 8.0, including `NTILE`, `LEAD`, `LAG`, `PERCENT_RANK`, `NTH_VALUE`, `CUME_DIST`, `FIRST_VALUE`, `LAST_VALUE`, `RANK`, `DENSE_RANK`, and `ROW_NUMBER`
  - Support Views (**Experimental**)
  - Improve Table Partition
    * Support Range Partition
    * Support Hash Partition

  - Add the plug-in framework, supporting plugins such as IP Whitelist (**Enterprise**) and Audit Log (**Enterprise**).
  - Support the SQL Plan Management function to create SQL execution plan binding to ensure query stability (**Experimental**)

- SQL Optimizer
  - Optimize the `NOT EXISTS` subquery and convert it to `Anti Semi Join` to improve performance
  - Optimize the constant propagation on the `Outer Join`, and add the optimization rule of `Outer Join` elimination to reduce non-effective computations and improve performance
  - Optimize the `IN` subquery to execute `Inner Join` after aggregation to improve performance
  - Optimize `Index Join` to adapt to more scenarios
  - Improve the Partition Pruning optimization rule of Range Partition
  - Optimize the query logic for `_tidb_rowid`to avoid full table scan and improve performance
  - Match more prefix columns of the indexes when extracting access conditions of composite indexes if there are relevant columns in the filter to improve performance
  - Improve the accuracy of cost estimates by using order correlation between columns
  - Optimize `Join Order` based on the greedy strategy and the dynamic programming algorithm to speed up the join operation of multiple tables
  - Support Skyline Pruning, with some rules to prevent the execution plan from relying too heavily on statistics to improve query stability
  - Improve the accuracy of row count estimation for single-column indexes with NULL values
  - Support `FAST ANALYZE` that randomly samples in each Region to avoid full table scan and improve performance with statistics collection
  - Support the incremental Analyze operation on monotonically increasing index columns to improve performance with statistics collection
  - Support using subqueries in the `DO` statement
  - Support using `Index Join` in transactions
  - Optimize `prepare`/`execute` to support DDL statements with no parameters
  - Modify the system behavior to auto load statistics when the `stats-lease` variable value is 0
  - Support exporting historical statistics
  - Support the `dump`/`load` correlation of histograms

- SQL Execution Engine
  - Optimize log output: `EXECUTE` outputs user variables and `COMMIT` outputs slow query logs to facilitate troubleshooting
  - Support the `EXPLAIN ANALYZE` function to improve SQL tuning usability
  - Support the `admin show next_row_id` command to get the ID of the next row

  - Add six built-in functions: `JSON_QUOTE`, `JSON_ARRAY_APPEND`, `JSON_MERGE_PRESERVE` ↪ , `BENCHMARK` ,`COALESCE`, and `NAME_CONST`
  - Optimize control logics on the chunk size to dynamically adjust based on the query context, to reduce the SQL execution time and resource consumption
  - Support tracking and controlling memory usage in three operators - `TableReader`, `IndexReader` and `IndexLookupReader`
  - Optimize the Merge Join operator to support an empty `ON` condition
  - Optimize write performance for single tables that contains too many columns
  - Improve the performance of `admin show ddl jobs` by supporting scanning data in reverse order
  - Add the `split table region` statement to manually split the table Region to alleviate hotspot issues
  - Add the `split index region` statement to manually split the index Region to alleviate hotspot issues
  - Add a blocklist to prohibit pushing down expressions to Coprocessor
  - Optimize the `Expensive Query` log to print the SQL query in the log when it exceeds the configured limit of execution time or memory

- DDL
  - Support migrating from character set `utf8` to `utf8mb4`
  - Change the default character set from`utf8` to `utf8mb4`
  - Add the `alter schema` statement to modify the character set and the collation of the database
  - Support ALTER algorithm `INPLACE`/`INSTANT`
  - Support `SHOW CREATE VIEW`
  - Support `SHOW CREATE USER`
  - Support fast recovery of mistakenly deleted tables
  - Support adjusting the number of concurrencies of ADD INDEX dynamically
  - Add the `pre_split_regions` option that pre-allocates Regions when creating the table using the `CREATE TABLE` statement, to relieve write hot Regions caused by lots of writes after the table creation
  - Support splitting Regions by the index and range of the table specified using SQL statements to relieve hotspot issues
  - Add the `ddl_error_count_limit` global variable to limit the number of DDL task retries
  - Add a feature to use `SHARD_ROW_ID_BITS` to scatter row IDs when the column contains an AUTO_INCREMENT attribute to relieve hotspot issues
  - Optimize the lifetime of invalid DDL metadata to speed up recovering the normal execution of DDL operations after upgrading the TiDB cluster

- Transactions
  - Support the pessimistic transaction mode (**Experimental**)
  - Optimize transaction processing logics to adapt to more scenarios:
    * Change the default value `tidb_disable_txn_auto_retry` to `on`, which means non-auto committed transactions will not be retried

    * Add the `tidb_batch_commit` system variable to split a transaction into multiple ones to be executed concurrently
    * Add the `tidb_low_resolution_tso` system variable to control the number of TSOs to obtain in batches and reduce the number of times that transactions request for TSOs, to improve performance in scenarios with relatively low requirement of consistency
    * Add the `tidb_skip_isolation_level_check` variable to control whether to report errors when the isolation level is set to SERIALIZABLE
    * Modify the `tidb_disable_txn_auto_retry` system variable to make it work on all retryable errors

- Permission Management
  - Perform permission check on the `ANALYZE`, `USE`, `SET GLOBAL`, and `SHOW PROCESSLIST` statements
  - Support Role Based Access Control (RBAC) (**Experimental**)
- Server
  - Optimize slow query logs:
    * Restructure the log format
    * Optimize the log content
    * Optimize the log query method to support using the `INFORMATION_SCHEMA.SLOW_QUERY` and `ADMIN SHOW SLOW` statements of the memory table to query slow query logs
  - Develop a unified log format specification with restructured log system to facilitate collection and analysis by tools
  - Support using SQL statements to manage TiDB Binlog services, including querying status, enabling TiDB Binlog, maintaining and sending TiDB Binlog strategies.
  - Support using `unix_socket` to connect to the database
  - Support `Trace` for SQL statements
  - Support getting information for a TiDB instance via the `/debug/zip` HTTP interface to facilitate troubleshooting.
  - Optimize monitoring items to facilitate troubleshooting:
    * Add the `high_error_rate_feedback_total` monitoring item to monitor the difference between the actual data volume and the estimated data volume based on statistics
    * Add a QPS monitoring item in the database dimension
  - Optimize the system initialization process to only allow the DDL owner to perform the initialization. This reduces the startup time for initialization or upgrading.
  - Optimize the execution logic of `kill query` to improve performance and ensure resource is release properly
  - Add a startup option `config-check` to check the validity of the configuration file
  - Add the `tidb_back_off_weight` system variable to control the backoff time of internal error retries

  - Add the `wait_timeout`and `interactive_timeout` system variables to control the maximum idle connections allowed
  - Add the connection pool for TiKV to shorten the connection establishing time

- Compatibility

  - Support the `ALLOW_INVALID_DATES` SQL mode
  - Support the MySQL 320 Handshake protocol
  - Support manifesting unsigned BIGINT columns as auto-increment columns
  - Support the `SHOW CREATE DATABASE IF NOT EXISTS` syntax
  - Optimize the fault tolerance of `load data` for CSV files
  - Abandon the predicate pushdown operation when the filtering condition contains a user variable to improve the compatibility with MySQL's behavior of using user variables to simulate Window Functions

16.17.21.3 PD

- Support re-creating a cluster from a single node
- Migrate Region metadata from etcd to the go-leveldb storage engine to solve the storage bottleneck in etcd for large-scale clusters
- API

  - Add the `remove-tombstone` API to clear Tombstone stores
  - Add the `ScanRegions` API to batch query Region information
  - Add the `GetOperator` API to query running operators
  - Optimize the performance of the `GetStores` API

- Configurations

  - Optimize configuration check logic to avoid configuration item errors
  - Add `enable-two-way-merge` to control the direction of Region merge
  - Add `hot-region-schedule-limit` to control the scheduling rate for hot Regions
  - Add `hot-region-cache-hits-threshold` to identify hotspot when hitting multiple thresholds consecutively
  - Add the `store-balance-rate` configuration item to control the maximum numbers of balance Region operators allowed per minute

- Scheduler Optimizations

  - Add the store limit mechanism for separately controlling the speed of operators for each store
  - Support the `waitingOperator` queue to optimize the resource race among different schedulers
  - Support scheduling rate limit to actively send scheduling operations to TiKV. This improves the scheduling rate by limiting the number of concurrent scheduling tasks on a single node.
  - Optimize the `Region Scatter` scheduling to be not restrained by the limit mechanism

  - Add the `shuffle-hot-region` scheduler to facilitate TiKV stability test in scenarios of poor hotspot scheduling

- Simulator
  - Add simulator for data import scenarios
  - Support setting different heartbeats intervals for the Store

- Others
  - Upgrade etcd to solve the issues of inconsistent log output formats, Leader selection failure in prevote, and lease deadlocking
  - Develop a unified log format specification with restructured log system to facilitate collection and analysis by tools
  - Add monitoring metrics including scheduling parameters, cluster label information, and time consumed by PD to process TSO requests, Store ID, and address information.

16.17.21.4 TiKV

- Support distributed GC and concurrent lock resolving for improved GC performance
- Support reversed `raw_scan` and `raw_batch_scan`
- Support Multi-thread Raftstore and Multi-thread Apply to improve scalabilities, concurrency capacity, and resource usage within a single node. Performance improves by 70% under the same level of pressure
- Support batch receiving and sending Raft messages, improving TPS by 7% for write intensive scenarios
- Support checking RocksDB Level 0 files before applying snapshots to avoid write stall
- Introduce Titan, a key-value plugin that improves write performance for scenarios with value sizes greater than 1KiB, and relieves write amplification in certain degrees
- Support the pessimistic transaction mode (**Experimental**)
- Support getting monitoring information via HTTP
- Modify the semantics of `Insert` to allow Prewrite to succeed only when there is no Key
- Develop a unified log format specification with restructured log system to facilitate collection and analysis by tools
- Add performance metrics related to configuration information and key bound crossing
- Support Local Reader in RawKV to improve performance
- Engine
  - Optimize memory management to reduce memory allocation and copying for `Iterator Key Bound Option`
  - Support `block cache` sharing among different column families

- Server
  - Reduce context switch overhead from `batch commands`

  - Remove `txn scheduler`
  - Add monitoring items related to `read index` and `GC worker`

- RaftStore
  - Support Hibernate Regions to optimize CPU consumption from RaftStore (**Experimental**)
  - Remove the local reader thread

- Coprocessor
  - Refactor the computation framework to implement vector operators, computation using vector expressions, and vector aggregations to improve performance
  - Support providing operator execution status for the `EXPLAIN ANALYZE` statement in TiDB
  - Switch to the `work-stealing` thread pool model to reduce context switch cost

16.17.21.5 Tools

- TiDB Lightning
  - Support redirected replication of data tables
  - Support importing CSV files
  - Improve performance for conversion from SQL to KV pairs
  - Support batch import of single tables to improve performance
  - Support separately importing data and indexes for big tables to improve the performance of TiKV-importer
  - Support filling the missing column using the `row_id` or the default column value when column data is missing in the new file
  - Support setting a speed limit in `TIKV-importer` when uploading SST files to TiKV

- TiDB Binlog
  - Add the `advertise-addr` configuration in Drainer to support the bridge mode in the container environment
  - Add the `GetMvccByEncodeKey` function in Pump to speed up querying the transaction status
  - Support compressing communication data among components to reduce network resource consumption
  - Add the Arbiter tool that supports reading binlog from Kafka and replicate the data into MySQL
  - Support filtering out files that don't require replication via Reparo
  - Support replicating generated columns
  - Add the `syncer.sql-mode` configuration item to support using different sql-modes to parse DDL queries
  - Add the `syncer.ignore-table` configuration item to support filtering tables not to be replicated

- sync-diff-inspector
  - Support checkpoint to record verification status and continue the verification from last saved point after restarting
  - Add the `only-use-checksum` configuration item to check data consistency by calculating checksum
  - Support using TiDB statistics and multiple columns to split chunks for comparison to adapt to more scenarios

16.17.21.6 TiDB Ansible

- Upgrade the following monitoring components to a stable version:
  - Prometheus from V2.2.1 to V2.8.1
  - Pushgateway from V0.4.0 to V0.7.0
  - Node_exporter from V0.15.2 to V0.17.0
  - Alertmanager from V0.14.0 to V0.17.0
  - Grafana from V4.6.3 to V6.1.6
  - Ansible from V2.5.14 to V2.7.11
- Add the TiKV summary monitoring dashboard to view cluster status conveniently
- Add the TiKV trouble_shooting monitoring dashboard to remove duplicate items and facilitate troubleshooting
- Add the TiKV details monitoring dashboard to facilitate debugging and troubleshooting
- Add concurrent check for version consistency during rolling updates to improve the update performance
- Support deployment and operations for TiDB Lightning
- Optimize the `table-regions.py` script to support displaying Leader distribution by tables
- Optimize TiDB monitoring and add latency related monitoring items by SQL categories
- Modify the operating system version limit to only support the CentOS 7.0+ and Red Hat 7.0+ operating systems
- Add the monitoring item to predict the maximum QPS of the cluster (hidden by default)

16.17.22 TiDB 3.0.0-rc.3 Release Notes

Release date: June 21, 2019

TiDB version: 3.0.0-rc.3

TiDB Ansible version: 3.0.0-rc.3

16.17.22.1 Overview

On June 21, 2019, TiDB 3.0.0-rc.3 is released. The corresponding TiDB Ansible version is 3.0.0-rc.3. Compared with TiDB 3.0.0-rc.2, this release has greatly improved the stability, usability, features, the SQL optimizer, statistics, and the execution engine.

16.17.22.2 TiDB

- SQL Optimizer
  - Remove the feature of collecting virtual generated column statistics #10629
  - Fix the issue that the primary key constant overflows during point queries #10699
  - Fix the issue that using uninitialized information in `fast analyze` causes panic #10691
  - Fix the issue that executing the `create view` statement using `prepare` causes panic because of wrong column information #10713
  - Fix the issue that the column information is not cloned when handling window functions #10720
  - Fix the wrong estimation for the selectivity rate of the inner table selection in index join #10854
  - Support automatic loading statistics when the `stats-lease` variable value is 0 #10811
- Execution Engine
  - Fix the issue that resources are not correctly released when calling the `Close` function in `StreamAggExec` #10636
  - Fix the issue that the order of `table_option` and `partition_options` is incorrect in the result of executing the `show create table` statement for partitioned tables #10689
  - Improve the performance of `admin show ddl jobs` by supporting scanning data in reverse order #10687
  - Fix the issue that the result of the `show grants` statement in RBAC is incompatible with that of MySQL when this statement has the `current_user` field #10684
  - Fix the issue that UUIDs might generate duplicate values on multiple nodes #10712
  - Fix the issue that the `show view` privilege is not considered in `explain` #10635
  - Add the `split table region` statement to manually split the table Region to alleviate the hotspot issue #10765
  - Add the `split index region` statement to manually split the index Region to alleviate the hotspot issue #10764
  - Fix the incorrect execution issue when you execute multiple statements such as `create user`, `grant`, or `revoke` consecutively #10737
  - Add a blocklist to prohibit pushing down expressions to Coprocessor #10791
  - Add the feature of printing the `expensive query` log when a query exceeds the memory configuration limit #10849

  - Add the `bind-info-lease` configuration item to control the update time of the modified binding execution plan #10727
  - Fix the OOM issue in high concurrent scenarios caused by the failure to quickly release Coprocessor resources, resulted from the `execdetails.ExecDetails` pointer #10832
  - Fix the panic issue caused by the `kill` statement in some cases #10876

- Server

  - Fix the issue that goroutine might leak when repairing GC #10683
  - Support displaying the `host` information in slow queries #10693
  - Support reusing idle links that interact with TiKV #10632
  - Fix the support for enabling the `skip-grant-table` option in RBAC #10738
  - Fix the issue that `pessimistic-txn` configuration goes invalid #10825
  - Fix the issue that the actively canceled ticlient requests are still retried #10850
  - Improve performance in the case where pessimistic transactions conflict with optimistic transactions #10881

- DDL

  - Fix the issue that modifying charset using `alter table` causes the `blob` type change #10698
  - Add a feature to use `SHARD_ROW_ID_BITS` to scatter row IDs when the column contains an `AUTO_INCREMENT` attribute to alleviate the hotspot issue #10794
  - Prohibit adding stored generated columns by using the `alter table` statement #10808
  - Optimize the invalid survival time of DDL metadata to shorten the period during which the DDL operation is slower after cluster upgrade #10795

16.17.22.3 PD

- Add the `enable-two-way-merge` configuration item to allow only one-way merging #1583
- Add scheduling operations for `AddLightLearner` and `AddLightPeer` to make Region Scatter scheduling unrestricted by the limit mechanism #1563
- Fix the issue of insufficient reliability because the data might only have one replica replication when the system is started #1581
- Optimize configuration check logic to avoid configuration item errors #1585
- Adjust the definition of the `store-balance-rate` configuration to the upper limit of the number of balance operators generated per minute #1591
- Fix the issue that the store might have been unable to generate scheduled operations #1590

16.17.22.4 TiKV

- Engine

  - Fix the issue that incomplete snapshots are generated in the system caused by the iterator not checking the status #4936
  - Fix the data loss issue caused by a delay of flushing data to the disk when receiving snapshots after a power failure in abnormal conditions #4850

- Server
  - Add a feature to check the validity of the `block-size` configuration #4928
  - Add `READ_INDEX`-related monitoring metrics #4830
  - Add GC worker-related monitoring metrics #4922

- Raftstore
  - Fix the issue that the cache of the local reader is not cleared correctly #4778
  - Fix the issue that the request delay might be increased when transferring the leader and changing `conf` #4734
  - Fix the issue that a stale command is wrongly reported #4682
  - Fix the issue that the command might be pending for a long time #4810
  - Fix the issue that files are damaged after a power failure, which is caused by a delay of synchronizing the snapshot file to the disk #4807, #4850

- Coprocessor
  - Support Top-N in vector calculation #4827
  - Support `Stream` aggregation in vector calculation #4786
  - Support the `AVG` aggregate function in vector calculation #4777
  - Support the `First` aggregate function in vector calculation #4771
  - Support the `SUM` aggregate function in vector calculation #4797
  - Support the `MAX/MIN` aggregate function in vector calculation #4837
  - Support the `Like` expression in vector calculation #4747
  - Support the `MultiplyDecimal` expression in vector calculation #4849
  - Support the `BitAnd/BitOr/BitXor` expression in vector calculation #4724
  - Support the `UnaryNot` expression in vector calculation #4808

- Transaction
  - Fix the issue that an error occurs caused by non-pessimistic locking conflicts in pessimistic transactions #4801, #4883
  - Reduce unnecessary calculation for optimistic transactions after enabling pessimistic transactions to improve the performance #4813
  - Add a feature of single statement rollback to ensure that the whole transaction does not need a rollback operation in a deadlock situation #4848
  - Add pessimistic transaction-related monitoring items #4852
  - Support using the `ResolveLockLite` command to resolve lightweight locks to improve the performance when severe conflicts exist #4882

- tikv-ctl
  - Add the `bad-regions` command to support checking more abnormal conditions #4862

  - Add a feature of forcibly executing the `tombstone` command #4862

- Misc
  - Add the `dist_release` compiling command #4841

16.17.22.5 Tools

- TiDB Binlog
  - Fix the wrong offset issue caused by Pump not checking the returned value when it fails to write data #640
  - Add the `advertise-addr` configuration in Drainer to support the bridge mode in the container environment #634
  - Add the `GetMvccByEncodeKey` function in Pump to speed up querying the transaction status #632

16.17.22.6 TiDB Ansible

- Add a monitoring item to predict the maximum QPS value of the cluster ("hide" by default) #f5cfa4d

16.17.23 TiDB 3.0.0-rc.2 Release Notes

Release date: May 28, 2019

TiDB version: 3.0.0-rc.2

TiDB Ansible version: 3.0.0-rc.2

16.17.23.1 Overview

On May 28, 2019, TiDB 3.0.0-rc.2 is released. The corresponding TiDB Ansible version is 3.0.0-rc.2. Compared with TiDB 3.0.0-rc.1, this release has greatly improved the stability, usability, features, the SQL optimizer, statistics, and the execution engine.

16.17.23.2 TiDB

- SQL Optimizer
  - Support Index Join in more scenarios #10540
  - Support exporting historical statistics #10291
  - Support the incremental `Analyze` operation on monotonically increasing index columns #10355
  - Neglect the NULL value in the `Order By` clause #10488

  - Fix the wrong schema information calculation of the `UnionAll` logical operator when simplifying the column information #10384
  - Avoid modifying the original expression when pushing down the `Not` operator #10363
  - Support the `dump/load` correlation of histograms #10573

- Execution Engine

  - Handle virtual columns with a unique index properly when fetching duplicate rows in `batchChecker` #10370
  - Fix the scanning range calculation issue for the `CHAR` column #10124
  - Fix the issue of `PointGet` incorrectly processing negative numbers #10113
  - Merge `Window` functions with the same name to improve execution efficiency #9866
  - Allow the `RANGE` frame in a `Window` function to contain no `OrderBy` clause #10496

- Server

  - Fix the issue that TiDB continuously creates a new connection to TiKV when a fault occurs in TiKV #10301
  - Make `tidb_disable_txn_auto_retry` affect all retryable errors instead of only write conflict errors #10339
  - Allow DDL statements without parameters to be executed using `prepare` ↪ `/execute` #10144
  - Add the `tidb_back_off_weight` variable to control the backoff time #10266
  - Prohibit TiDB retrying non-automatically committed transactions in default conditions by setting the default value of `tidb_disable_txn_auto_retry` to `on` #10266
  - Fix the database privilege judgment of `role` in `RBAC` #10261
  - Support the pessimistic transaction mode (experimental) #10297
  - Reduce the wait time for handling lock conflicts in some cases #10006
  - Make the Region cache able to visit follower nodes when a fault occurs in the leader node #10256
  - Add the `tidb_low_resolution_tso` variable to control the number of TSOs obtained in batches and reduce the times of transactions obtaining TSO to adapt for scenarios where data consistency is not so strictly required #10428

- DDL

  - Fix the uppercase issue of the charset name in the storage of the old version of TiDB #10272
  - Support `preSplit` of table partition, which pre-allocates table Regions when creating a table to avoid write hotspots after the table is created #10221
  - Fix the issue that TiDB incorrectly updates the version information in PD in some cases #10324
  - Support modifying the charset and collation using the `ALTER DATABASE` statement #10393

  - Support splitting Regions based on the index and range of the specified table to relieve hotspot issues #10203
  - Prohibit modifying the precision of the decimal column using the `alter table` statement #10433
  - Fix the restriction for expressions and functions in hash partition #10273
  - Fix the issue that adding indexes in a table that contains partitions will in some cases cause TiDB panic #10475
  - Validate table information before executing the DDL to avoid invalid table schemas #10464
  - Enable hash partition by default; and enable range columns partition when there is only one column in the partition definition #9936

16.17.23.3 PD

- Enable the Region storage by default to store the Region metadata #1524
- Fix the issue that hot Region scheduling is preempted by another scheduler #1522
- Fix the issue that the priority for the leader does not take effect #1533
- Add the gRPC interface for `ScanRegions` #1535
- Push operators actively #1536
- Add the store limit mechanism for separately controlling the speed of operators for each store #1474
- Fix the issue of inconsistent `Config` status #1476

16.17.23.4 TiKV

- Engine
  - Support multiple column families sharing a block cache #4563
- Server
  - Remove `TxnScheduler` #4098
  - Support pessimistic lock transactions #4698
- Raftstore
  - Support hibernate Regions to reduce the consumption of the raftstore CPU #4591
  - Fix the issue that the leader does not reply to the `ReadIndex` requests for the learner #4653
  - Fix transferring leader failures in some cases #4684
  - Fix the dirty read issue in some cases #4688
  - Fix the issue that a snapshot may lose applied data in some cases #4716
- Coprocessor
  - Add more RPN functions
    * `LogicalOr` #4691

    * `LTReal` #4602
    * `LEReal` #4602
    * `GTReal` #4602
    * `GEReal` #4602
    * `NEReal` #4602
    * `EQReal` #4602
    * `IsNull` #4720
    * `IsTrue` #4720
    * `IsFalse` #4720
    * Support comparison arithmetic for `Int` #4625
    * Support comparison arithmetic for `Decimal` #4625
    * Support comparison arithmetic for `String` #4625
    * Support comparison arithmetic for `Time` #4625
    * Support comparison arithmetic for `Duration` #4625
    * Support comparison arithmetic for `Json` #4625
    * Support plus arithmetic for `Int` #4733
    * Support plus arithmetic for `Real` #4733
    * Support plus arithmetic for `Decimal` #4733
    * Support MOD functions for `Int` #4727
    * Support MOD functions for `Real` #4727
    * Support MOD functions for `Decimal` #4727
    * Support minus arithmetic for `Int` #4746
    * Support minus arithmetic for `Real` #4746
    * Support minus arithmetic for `Decimal` #4746

16.17.23.5 Tools

- TiDB Binlog
    - Add a metric to track the delay of data replication downstream #594
- TiDB Lightning
    - Support merging sharded databases and tables #95
    - Add the retry mechanism for KV write failure #176
    - Update the default value of `table-concurrency` to 6 #175
    - Reduce required configuration items by automatically discovering `tidb.pd-addr` and `tidb.port` if they are not provided #173

16.17.24 TiDB 3.0.0-rc.1 Release Notes

Release Date: May 10, 2019

TiDB version: 3.0.0-rc.1

TiDB Ansible version: 3.0.0-rc.1

16.17.24.1 Overview

On May 10, 2019, TiDB 3.0.0-rc.1 is released. The corresponding TiDB Ansible version is 3.0.0-rc.1. Compared with TiDB 3.0.0-beta.1, this release has greatly improved the stability, usability, features, the SQL optimizer, statistics, and the execution engine.

16.17.24.2 TiDB

- SQL Optimizer
  - Improve the accuracy of cost estimates by using order correlation between columns; introduce a heuristic parameter `tidb_opt_correlation_exp_factor` to control the preference for index scans for scenarios when correlation cannot be directly used for estimation. #9839
  - Match more prefix columns of the indexes when extracting access conditions of composite indexes if there are relevant columns in the filter #10053
  - Use the dynamic programming algorithm to specify the execution order of join operations when the number of tables participating in the join is less than the value of `tidb_opt_join_reorder_threshold`. #8816
  - Match more prefix columns of the indexes in the inner tables that build the index join when using composite indexes as the access conditions #8471
  - Improve the accuracy of row count estimation for single-column indexes with NULL values #9474
  - Specially handle `GROUP_CONCAT` when eliminating aggregate functions during the logical optimization phase to prevent incorrect executions #9967
  - Properly push the filter down to child nodes of the join operator if the filter is a constant #9848
  - Specially handle some functions such as `RAND()` when pruning columns during the logical optimization phase to prevent incompatibilities with MySQL #10064
  - Support `FAST ANALYZE`, which speeds up statistics collection by sampling the region instead of scanning the entire region. This feature is controlled by the variable `tidb_enable_fast_analyze`. #10258
  - Support SQL Plan Management, which ensures execution stability by performing execution plan binding for SQL statements. This feature is currently in beta and only supports bound execution plans for SELECT statements. It is not recommended to use it in the production environment. #10284
- Execution Engine
  - Support tracking and controlling memory usage in three operators - `TableReader`, `IndexReader` and `IndexLookupReader` #10003
  - Support showing more information about coprocessor tasks in the slow log such as the number of tasks in coprocessor, the average/longest/90% of execution/waiting time and the addresses of the TiKVs which take the longest execution time or waiting time #10165
  - Support the prepared DDL statements with no placeholders #10144

- Server
  - Only allow the DDL owner to execute bootstrap when TiDB is started #10029
  - Add the variable `tidb_skip_isolation_level_check` to prevent TiDB from reporting errors when setting the transaction isolation level to SERIALIZABLE #10065
  - Merge the implicit commit time and the SQL execution time in the slow log #10294
    * Support for SQL Roles (RBAC Privilege Management)
    * Support `SHOW GRANT` #10016
    * Support `SET DEFAULT ROLE` #9949
  - Support `GRANT ROLE` #9721
  - Fix the `ConnectionEvent` error from the `whitelist` plugin that makes TiDB exit #9889
  - Fix the issue of mistakenly adding read-only statements to the transaction history #9723
  - Improve `kill` statements to stop SQL execution and release resources more quickly #9844
  - Add a startup option `config-check` to check the validity of the configuration file #9855
  - Fix the validity check of inserting NULL fields when the strict SQL mode is disabled #10161
- DDL
  - Add the `pre_split_regions` option for `CREATE TABLE` statements; this option supports pre-splitting the Table Region when creating a table to avoid write hot spots caused by lots of writes after the table creation #10138
  - Optimize the execution performance of some DDL statements #10170
  - Add the warning that full-text indexes are not supported for `FULLTEXT KEY` #9821
  - Fix the compatibility issue for the UTF8 and UTF8MB4 charsets in the old versions of TiDB #9820
  - Fix the potential bug in `shard_row_id_bits` of a table #9868
  - Fix the bug that the column charset is not changed after the table charset is changed #9790
  - Fix a potential bug in `SHOW COLUMN` when using `BINARY/BIT` as the column default value #9897
  - Fix the compatibility issue in displaying `CHARSET/COLLATION` descriptions in the `SHOW FULL COLUMNS` statement #10007
  - Fix the issue that the `SHOW COLLATIONS` statement only lists collations supported by TiDB #10186

16.17.24.3 PD

- Upgrade ETCD #1452

  - Unify the log format of etcd and PD server
  - Fix the issue of failing to elect Leader by PreVote
  - Support fast dropping the "propose" and "read" requests that are to fail to avoid blocking the subsequent requests
  - Fix the deadlock issue of Lease

- Fix the issue that a hot store makes incorrect statistics of keys #1487
- Support forcibly rebuilding a PD cluster from a single PD node #1485
- Fix the issue that `regionScatterer` might generate an invalid `OperatorStep` #1482
- Fix the too short timeout issue of the `MergeRegion` operator #1495
- Support giving high priority to hot region scheduling #1492
- Add the metrics for recording the time of handling TSO requests on the PD server side #1502
- Add the corresponding Store ID and Address to the metrics related to the store #1506
- Support the `GetOperator` service #1477
- Fix the issue that the error cannot be sent in the Heartbeat stream because the store cannot be found #1521

16.17.24.4 TiKV

- Engine
  - FIx the issue that may cause incorrect statistics on read traffic #4436
  - Fix the issue that may cause prefix extractor panic when deleting a range #4503
  - Optimize memory management to reduce memory allocation and copying for `Iterator Key Bound Option` #4537
  - Fix the issue that failing to consider learner log gap may in some cases cause panic #4559
  - Support `block cache` sharing among different `column families` #4612
- Server
  - Reduce context switch overhead of `batch commands` #4473
  - Check the validity of seek iterator status #4470
- RaftStore
  - Support configurable `properties index distance` #4517
- Coprocessor
  - Add batch index scan executor #4419
  - Add vectorized evaluation framework #4322
  - Add execution summary framework for batch executors #4433
  - Check the maximum column when constructing the RPN expression to avoid invalid column offset that may cause evaluation panic #4481
  - Add `BatchLimitExecutor` #4469

  - Replace the original `futures-cpupool` with `tokio-threadpool` in ReadPool to reduce context switch #4486
  - Add batch aggregation framework #4533
  - Add `BatchSelectionExecutor` #4562
  - Add batch aggression function `AVG` #4570
  - Add RPN function `LogicalAnd`#4575

- Misc

  - Support `tcmalloc` as a memory allocator #4370

16.17.24.5 Tools

- TiDB Binlog

  - Fix the replication abortion issue when binlog data for the primary key column of unsigned int type is negative #573
  - Provide no compression option when downstream is `pb`; modify the downstream name from `pb` to `file` #559
  - Add the `storage.sync-log` configuration item in Pump that allows asynchronous flush on local storage #509
  - Support traffic compression for communications between Pump and Drainer #495
  - Add the `syncer.sql-mode` configuration item in Drainer to support parsing DDL queries in different sql-mode #511
  - Add the `syncer.ignore-table` configuration item to support filtering out tables that do not require replication #520

- Lightning

  - Use row IDs or default column values to populate the column data missed in the dump file #170
  - Fix the bug in Importer that import success may still be returned even if part of the SST failed to be imported #4566
  - Support speed limit in Importer when uploading SST to TiKV #4412
  - Support importing tables by size to reduce impacts on the cluster brought by Checksum and Analyze for big tables, and improve the success rate for Checksum and Analyze #156
  - Improve Lightning's SQL encoding performance by 50% by directly parsing data source file as types.Datum of TiDB and saving extra parsing overhead from the KV encoder #145
  - Change log format to Unified Log Format #162
  - Add some command line options for use when the configuration file is missing #157

- sync-diff-inspector

  - Support checkpoint to record verification status and continue the verification from last saved point after restarting #224

  - Add the `only-use-checksum` configuration item to check data consistency by calculating checksum #215

16.17.24.6 TiDB Ansible

- Support more TiKV monitoring panels and update versions for Ansible, Grafana, and Prometheus #727
  - Summary dashboard for viewing cluster status
  - trouble_shooting dashboard for troubleshooting issues
  - Details dashboard for developers to analyze issues
- Fix the bug that causes the downloading failure of TiDB Binlog of Kafka version #730
- Modify version limits on supported operating systems as CentOS 7.0+ and later, and Red Hat 7.0 and later #733
- Change version detection mode during the rolling update to multi-concurrent #736
- Update documentation links in README #740
- Remove redundant TiKV monitoring metrics; add new metrics for troubleshooting #735
- Optimize `table-regions.py` script to display leader distribution by table #739
- Update configuration file for Drainer #745
- Optimize TiDB monitoring with new panels that display latencies by SQL categories #747
- Update the Lightning configuration file and add the `tidb_lightning_ctl` script #1e946f8

16.17.25 TiDB 3.0.0 Beta.1 Release Notes

Release Date: March 26, 2019

TiDB version: 3.0.0-beta.1

TiDB Ansible version: 3.0.0-beta.1

16.17.25.1 Overview

On March 26, 2019, TiDB 3.0.0 Beta.1 is released. The corresponding TiDB Ansible version is 3.0.0 Beta.1. Compared with TiDB 3.0.0 Beta, this release has greatly improved the stability, usability, features, the SQL optimizer, statistics, and the execution engine.

16.17.25.2 TiDB

- SQL Optimizer
  - Support calculating the Cartesian product by using `Sort Merge Join` #9032

  - Support Skyline Pruning, with some rules to prevent the execution plan from relying too heavily on statistics #9337
  - Support Window Functions
    * `NTILE` #9682
    * `LEAD` and `LAG` #9672
    * `PERCENT_RANK` #9671
    * `NTH_VALUE` #9596
    * `CUME_DIST` #9619
    * `FIRST_VALUE` and `LAST_VALUE` #9560
    * `RANK` and `DENSE_RANK` #9500
    * `RANGE FRAMED` #9450
    * `ROW FRAMED` #9358
    * `ROW NUMBER` #9098
  - Add a type of statistic that indicates the order correlation between columns and the handle column #9315

- SQL Execution Engine
  - Add built-in functions
    * `JSON_QUOTE` #7832
    * `JSON_ARRAY_APPEND` #9609
    * `JSON_MERGE_PRESERVE` #8931
    * `BENCHMARK` #9252
    * `COALESCE` #9087
    * `NAME_CONST` #9261
  - Optimize the Chunk size based on the query context, to reduce the execution time of SQL statements and resources consumption of the cluster #6489

- Privilege management
  - Support `SET ROLE` and `CURRENT_ROLE` #9581
  - Support `DROP ROLE` #9616
  - Support `CREATE ROLE` #9461

- Server
  - Add the `/debug/zip` HTTP interface to get information of the current TiDB instance #9651
  - Support the `show pump status` and `show drainer status` SQL statements to check the Pump or Drainer status #9456
  - Support modifying the Pump or Drainer status by using SQL statements #9789
  - Support adding HASH fingerprints to SQL text for easy tracking of slow SQL statements #9662
  - Add the `log_bin` system variable ("0" by default) to control the enabling state of binlog; only support checking the state currently #9343
  - Support managing the sending binlog strategy by using the configuration file #9864

  - Support querying the slow log by using the `INFORMATION_SCHEMA.SLOW_QUERY` memory table #9290
  - Change the MySQL version displayed in TiDB from 5.7.10 to 5.7.25 #9553
  - Unify the log format for easy collection and analysis by tools
  - Add the `high_error_rate_feedback_total` monitoring item to record the difference between the actual data volume and the estimated data volume based on statistics #9209
  - Add the QPS monitoring item in the database dimension, which can be enabled by using a configuration item #9151

- DDL

  - Add the `ddl_error_count_limit` global variable ("512" by default) to limit the number of DDL task retries (If this number exceeds the limit, the DDL task is canceled) #9295
  - Support ALTER ALGORITHM `INPLACE/INSTANT` #8811
  - Support the `SHOW CREATE VIEW` statement #9309
  - Support the `SHOW CREATE USER` statement #9240

16.17.25.3 PD

- Unify the log format for easy collection and analysis by tools
- Simulator

  - Support different heartbeat intervals in different stores #1418
  - Add a case about importing data #1263

- Make hotspot scheduling configurable #1412
- Add the store address as the dimension monitoring item to replace the previous Store ID #1429
- Optimize the `GetStores` overhead to speed up the Region inspection cycle #1410
- Add an interface to delete the Tombstone Store #1472

16.17.25.4 TiKV

- Optimize the Coprocessor calculation execution framework and implement the TableScan section, with the Single TableScan performance improved by 5% ~ 30%

  - Implement the definition of the `BatchRows` row and the `BatchColumn` column #3660
  - Implement `VectorLike` to support accessing encoded and decoded data in the same way #4242
  - Define the `BatchExecutor` to interface and implement the way of converting requests to `BatchExecutor` #4243
  - Implement transforming the expression tree into the RPN format #4329

  - Implement the `BatchTableScanExecutor` vectorization operator to accelerate calculation #4351

- Unify the log format for easy collection and analysis by tools
- Support using the Local Reader to read in the Raw Read interface #4222
- Add metrics about configuration information #4206
- Add metrics about key exceeding bound #4255
- Add an option to control panic or return an error when encountering the key exceeding bound error #4254
- Add support for the `INSERT` operation, make prewrite succeed only when keys do not exist, and eliminate `Batch Get` #4085
- Use more fair batch strategy in the Batch System #4200
- Support Raw scan in tikv-ctl #3825

16.17.25.5 Tools

- TiDB Binlog
  - Add the Arbiter tool that supports reading binlog from Kafka and replicate the data into MySQL
  - Support filtering files that do not need to be replicated
  - Support replicating generated columns
- Lightning
  - Support disabling TiKV periodic Level-1 compaction, and when the TiKV cluster version is 2.1.4 or later, Level-1 compaction is automatically executed in the import mode #119, #4199
  - Add the `table_concurrency` configuration item to limit the number of import engines ("16" by default) and avoid overusing the importer disk space #119
  - Support saving the intermediate state SST to the disk, to reduce memory usage #4369
  - Optimize the import performance of TiKV-Importer and support separate import of data and indexes for large tables #132
  - Support importing CSV files #111
- Data replication comparison tool (sync-diff-inspector)
  - Support using TiDB statistics to split chunks to be compared #197
  - Support using multiple columns to split chunks to be compared #197

16.17.26 TiDB 3.0 Beta Release Notes

On January 19, 2019, TiDB 3.0 Beta is released. The corresponding TiDB Ansible 3.0 Beta is also released. TiDB 3.0 Beta builds on TiDB 2.1 with an added focus in stability, the SQL optimizer, statistics, and the execution engine.

16.17.26.1 TiDB

- New Features
  - Support Views
  - Support Window Functions
  - Support Range Partitioning
  - Support Hash Partitioning
- SQL Optimizer
  - Re-support the optimization rule of `AggregationElimination` #7676
  - Optimize the `NOT EXISTS` subquery and convert it to Anti Semi Join #7842
  - Add the `tidb_enable_cascades_planner` variable to support the new Cascades optimizer. Currently, the Cascades optimizer is not yet fully implemented and is turned off by default #7879
  - Support using Index Join in transactions #7877
  - Optimize the constant propagation on the Outer Join, so that the filtering conditions related to the Outer table in the Join result can be pushed down through the Outer Join to the Outer table, reducing the useless calculation of the Outer Join and improving the execution performance #7794
  - Adjust the optimization rule of Projection Elimination to the position after the Aggregation Elimination, to avoid redundant `Project` operators #7909
  - Optimize the `IFNULL` function and eliminate this function when the input parameter has a non-NULL attribute #7924
  - Support Range for `_tidb_rowid` construction queries, to avoid full table scan and reduce cluster stress #8047
  - Optimize the `IN` subquery to do the Inner Join after the aggregation, and add the `tidb_opt_insubq_to_join_and_agg` variable to control whether to enable this optimization rule and open it by default #7531
  - Support using subqueries in the `DO` statement #8343
  - Add the optimization rule of Outer Join elimination to reduce unnecessary table scan and Join operations and improve execution performance #8021
  - Modify the Hint behavior of the `TIDB_INLJ` optimizer, and the optimizer will use the table specified in Hint as the Inner table of Index Join #8243
  - Use `PointGet` in a wide range so that it can be used when the execution plan cache of the `Prepare` statement takes effect #8108
  - Introduce the greedy `Join Reorder` algorithm to optimize the join order selection when joining multiple tables #8394
  - Support View #8757
  - Support Window Function #8630
  - Return warning to the client when `TIDB_INLJ` is not in effect, to enhance usability #9037
  - Support deducing the statistics for filtered data based on filtering conditions and table statistics #7921
  - Improve the Partition Pruning optimization rule of Range Partition #8885

- SQL Executor
  - Optimize the `Merge Join` operator to support the empty `ON` condition #9037
  - Optimize the log and print the user variables used when executing the `EXECUTE` statement #7684
  - Optimize the log to print slow query information for the `COMMIT` statement #7951
  - Support the `EXPLAIN ANALYZE` feature to make the SQL tuning process easier #7827
  - Optimize the write performance of wide tables with many columns #7935
  - Support `admin show next_row_id` #8242
  - Add the `tidb_init_chunk_size` variable to control the size of the initial Chunk used by the execution engine #8480
  - Improve `shard_row_id_bits` and cross-check the auto-increment ID #8936
- `Prepare` Statement
  - Prohibit adding the `Prepare` statement containing subqueries to the query plan cache to guarantee the query plan is correct when different user variables are input #8064
  - Optimize the query plan cache to guarantee the plan can be cached when the statement contains non-deterministic functions #8105
  - Optimize the query plan cache to guarantee the query plan of `DELETE`/`UPDATE` ↪ `/INSERT` can be cached #8107
  - Optimize the query plan cache to remove the corresponding plan when executing the `DEALLOCATE` statement #8332
  - Optimize the query plan cache to avoid the TiDB OOM issue caused by caching too many plans by limiting the memory usage #8339
  - Optimize the `Prepare` statement to support using the `?` placeholder in the `ORDER` ↪ `BY`/`GROUP BY`/`LIMIT` clause #8206
- Privilege Management
  - Add the privilege check for the `ANALYZE` statement #8486
  - Add the privilege check for the `USE` statement #8414
  - Add the privilege check for the `SET GLOBAL` statement #8837
  - Add the privilege check for the `SHOW PROCESSLIST` statement #7858
- Server
  - Support the `Trace` feature #9029
  - Support the plugin framework #8788
  - Support using `unix_socket` and TCP simultaneously to connect to the database #8836
  - Support the `interactive_timeout` system variable #8573
  - Support the `wait_timeout` system variable #8346
  - Support splitting a transaction into multiple transactions based on the number of statements using the `tidb_batch_commit` variable #8293
  - Support using the `ADMIN SHOW SLOW` statement to check slow logs #7785

- Compatibility
  - Support the `ALLOW_INVALID_DATES` SQL mode #9027
  - Improve `LoadData` fault-tolerance for the CSV file #9005
  - Support the MySQL 320 handshake protocol #8812
  - Support using the unsigned `bigint` column as the auto-increment column #8181
  - Support the `SHOW CREATE DATABASE IF NOT EXISTS` syntax #8926
  - Abandon the predicate pushdown operation when the filtering condition contains a user variable to improve the compatibility with MySQL's behavior of using user variables to mock the Window Function behavior #8412
- DDL
  - Support fast recovery of mistakenly deleted tables #7937
  - Support adjusting the number of concurrencies of `ADD INDEX` dynamically #8295
  - Support changing the character set of tables or columns to `utf8`/`utf8mb4` #8037
  - Change the default character set from `utf8` to `utf8mb4` #7965
  - Support Range Partition #8011

16.17.26.2 Tools

- TiDB Lightning
  - Speed up converting SQL statements to KV pairs remarkably #110
  - Support batch import for a single table to improve import performance and stability #113

16.17.26.3 PD

- Add `RegionStorage` to store Region metadata separately #1237
- Add shuffle hot Region scheduler #1361
- Add scheduling parameter related metrics #1406
- Add cluster label related metrics #1402
- Add the importing data simulator #1263
- Fix the `Watch` issue about leader election #1396

16.17.26.4 TiKV

- Support distributed GC #3179
- Check RocksDB Level 0 files before applying snapshots to avoid Write Stall #3606
- Support reverse `raw_scan` and `raw_batch_scan` #3742
- Support using HTTP to obtain monitoring information #3855
- Support DST better #3786
- Support receiving and sending Raft messages in batch #3931
- Introduce a new storage engine Titan #3985

- Upgrade gRPC to v1.17.2 #4023
- Support receiving the client requests and sending replies in batch #4043
- Support multi-thread Apply #4044
- Support multi-thread Raftstore #4066

16.18 v2.1

16.18.1 TiDB 2.1.19 Release Notes

Release date: December 27, 2019

TiDB version: 2.1.19

TiDB Ansible version: 2.1.19

16.18.1.1 TiDB

- SQL Optimizer
  - Optimize the scenario of `select max(_tidb_rowid)from t` to avoid full table scan #13294
  - Fix the incorrect results caused by the incorrect value assigned to the user variable in the query and the push-down of predicates #13230
  - Fix the issue that the statistics are not accurate because a data race occurs when statistics are updated #13690
  - Fix the issue that the result is incorrect when the `UPDATE` statement contains both a sub-query and a stored generated column; fix the `UPDATE` statement execution error when this statement contains two same-named tables from different databases #13357
  - Fix the issue that the query plan might be incorrectly selected because the `PhysicalUnionScan` operator incorrectly sets the statistics #14134
  - Remove the `minAutoAnalyzeRatio` constraint to make the automatic `ANALYZE` more timely #14013
  - Fix the issue that the estimated number of rows is greater than `1` when the `WHERE` clause contains an equal condition on the unique key #13385
- SQL Execution Engine
  - Fix the precision overflow when using `int64` as the intermediate result of `unit64` in `ConvertJSONToInt` #13036
  - Fix the issue that when the `SLEEP` function is in a query (for example, `select 1 from (select sleep(1))t;`), column pruning causes `sleep(1)` in the query to be invalid #13039
  - Reduce memory overhead by reusing `Chunk` in the `INSERT ON DUPLICATE UPDATE` statement #12999
  - Add more transaction-related fields for the `slow_query` table #13129:

    * `Prewrite_time`
    * `Commit_time`
    * `Get_commit_ts_time`
    * `Commit_backoff_time`
    * `Backoff_types`
    * `Resolve_lock_time`
    * `Local_latch_wait_time`
    * `Write_key`
    * `Write_size`
    * `Prewrite_region`
    * `Txn_retry`
  - Fix the issue that a subquery contained in an `UPDATE` statement is incorrectly converted; fix the `UPDATE` execution failure when the `WHERE` clause contains a subquery #13120
  - Support executing `ADMIN CHECK TABLE` on partitioned tables #13143
  - Fix the issue that the precision of statements such as `SHOW CREATE TABLE` is incomplete when `ON UPDATE CURRENT_TIMESTAMP` is used as a column attribute and floating point precision is specified #12462
  - Fix the panic occurred when executing the `SELECT * FROM information_schema` ↪ `.KEY_COLUMN_USAGE` statement because the foreign key is not checked when dropping, modifying or changing the column #14162
  - Fix the issue that the returned data might be duplicated when `Streaming` is enabled in TiDB #13255
  - Fix the `Invalid time format` error caused by daylight saving time #13624
  - Fix the issue that data is incorrect because the precision is lost when an integer is converted to an unsigned floating point or decimal type #13756
  - Fix the issue that an incorrect type of value is returned when the `Quote` function handles the `NULL` value #13681
  - Fix the issue that the timezone is incorrect after parsing the date from strings using `gotime.Local` #13792
  - Fix the issue that the result might be incorrect because the `binSearch` function does not return an error in the implementation of `builtinIntervalRealSig` #13768
  - Fix the issue that an error might occur when converting the string type to the floating point type in the `INSERT` statement execution #14009
  - Fix the incorrect result returned from the `sum(distinct)` function #13041
  - Fix the issue that `data too long` is returned when `CAST` converting the data in `union` of the same location to the merged type because the returned type length of the `jsonUnquoteFunction` function is given an incorrect value #13645
  - Fix the issue that the password cannot be set because the privilege check is too strict #13805
- Server
  - Fix the issue that `KILL CONNECTION` might cause the goroutine leak #13252

  - Support getting the binlog status of all TiDB nodes via the `info/all` interface of the HTTP API #13188
  - Fix the failure to build the TiDB project on Windows #13650
  - Add the `server-version` configuration item to control and modify the version of TiDB server #13904
  - Fix the issue that the binary `plugin` compiled with Go1.13 does not run normally #13527

- DDL

  - Use the table's `COLLATE` instead of the system's default charset in the column when a table is created and the table contains `COLLATE` #13190
  - Limit the length of the index name when creating a table #13311
  - Fix the issue that the length of the table name is not checked when renaming a table #13345
  - Check the width range of the `BIT` column #13511
  - Make the error information output from `change/modify column` more understandable #13798
  - Fix the issue that when executing the `drop column` operation that has not yet been handled by the downstream Drainer, the downstream might receive DML operations without the affected column #13974

16.18.1.2 TiKV

- Raftstore

  - Fix the panic occurred when restarting TiKV and `is_merging` is given an incorrect value in the process of merging Regions and applying the Compact log #5884

- Importer

  - Remove the limit on the gRPC message length #5809

16.18.1.3 PD

- Improve the performance of the HTTP API for getting all Regions #1988
- Upgrade etcd to fix the issue that etcd PreVote cannot elect a leader (downgrade not supported) #2052

16.18.1.4 Tools

- TiDB Binlog

  - Optimize the node status information output through binlogctl #777

- Fix the panic occurred because of the `nil` value in the Drainer filter configuration #802
- Optimize the `Graceful` exit of Pump #825
- Add more detailed monitoring metrics when Pump writes binlog data #830
- Optimize Drainer's logic to refresh table information after Drainer has executed a DDL operation #836
- Fix the issue that the commit binlog of a DDL operation is ignored when Pump does not receive this binlog #855

16.18.1.5 TiDB Ansible

- Rename the `Uncommon Error OPM` monitoring item of TiDB service to `Write Binlog Error` and add the corresponding alert message #1038
- Upgrade TiSpark to 2.1.8 #1063

16.18.2 TiDB 2.1.18 Release Notes

Release date: November 4, 2019

TiDB version: 2.1.18

TiDB Ansible version: 2.1.18

16.18.2.1 TiDB

- SQL Optimizer
  - Fix the issue that invalid query ranges might appear when split by feedback #12172
  - Fix the issue that the privilege check is incorrect in point get plan #12341
  - Optimize execution performance of the `select ... limit ... offset ⋯` statement by pushing the Limit operator down to the `IndexLookUpReader` execution logic #12380
  - Support using parameters in `ORDER BY`, `GROUP BY` and `LIMIT OFFSET` #12514
  - Fix the issue that `IndexJoin` on the partition table returns incorrect results #12713
  - Fix the issue that the `str_to_date` function in TiDB returns a different result from MySQL when the date string and the format string do not match #12757
  - Fix the issue that outer join is incorrectly converted to inner join when the `cast` function is included in the query conditions #12791
  - Fix incorrect expression passing in the join condition of `AntiSemiJoin` #12800
- SQL Engine
  - Fix the incorrectly rounding of time (for example, `2019-09-11 11:17:47.999999666` should be rounded to `2019-09-11 11:17:48`) #12259

  - Fix the issue that the duration by `sql_type` for the `PREPARE` statement is not shown in the monitoring record #12329
  - Fix the panic issue when the `from_unixtime` function handles null #12572
  - Fix the compatibility issue that when an invalid value is inserted as the `YEAR` type, the result is `NULL` instead of `0000` #12744
  - Improve the behavior of the `AutoIncrement` column when it is implicitly allocated, to keep it consistent with the default mode of MySQL auto-increment locking ("consecutive" lock mode): for the implicit allocation of multiple `AutoIncrement` IDs in a single-line `Insert` statement, TiDB guarantees the continuity of the allocated values. This improvement ensures that the JDBC `getGeneratedKeys()` method will get the correct results in any scenario #12619
  - Fix the issue that the query is hanged when `HashAgg` serves as a child node of `Apply` #12769
  - Fix the issue that the `AND` and `OR` logical expressions return incorrect results when it comes to type conversion #12813

- Server

  - Fix the issue that the `SLEEP()` function is invalid for the `KILL TIDB QUERY` statements #12159
  - Fix the issue that no error is reported when `AUTO_INCREMENT` incorrectly allocates `MAX int64` and `MAX uint64` #12210
  - Fix the issue that the slow query logs are not recorded when the log level is `ERROR` #12373
  - Adjust the number of times that TiDB caches schema changes and corresponding changed table information from 100 to 1024, and support modification by using the `tidb_max_delta_schema_count` system variable #12515
  - Change the query start time from the point of "starting to execute" to "starting to compile" to make SQL statistics more accurate #12638
  - Add the record of `set session autocommit` in TiDB logs #12568
  - Record SQL query start time in `SessionVars` to prevent it from being reset during plan execution #12676
  - Support `?` placeholder in `ORDER BY`, `GROUP BY` and `LIMIT OFFSET` #12514
  - Add the `Prev_stmt` field in slow query logs to output the previous statement when the last statement is `COMMIT` #12724
  - Record the last statement before `COMMIT` into the log when the `COMMIT` fails in an explicitly committed transaction #12747
  - Optimize the saving method of the previous statement when the TiDB server executes a SQL statement to improve performance #12751
  - Fix the panic issue caused by `FLUSH PRIVILEGES` statements under the `skip-grant-table=true` configuration #12816
  - Increase the default minimum step of applying AutoID from `1000` to `30000` to avoid performance bottleneck when there are many write requests in a short time #12891
  - Fix the issue that the failed `Prepared` statement is not print in the error log when TiDB panics #12954

  - Fix the issue that the `COM_STMT_FETCH` time record in slow query logs is inconsistent with that in MySQL #12953
  - Add an error code in the error message for write conflicts to quickly locate the cause #12878

- DDL
  - Disallow dropping the `AUTO INCREMENT` attribute of a column by default. Modify the value of the `tidb_allow_remove_auto_inc` variable if you do need to drop this attribute. See System Variables for more details. #12146
  - Support multiple `uniques` when creating a unique index in the `Create Table` statement #12469
  - Fix a compatibility issue that if the foreign key constraint in `CREATE TABLE` statement has no schema, schema of the created table should be used instead of returning a `No Database selected` error #12678
  - Fix the issue that the `invalid list index` error is reported when executing `ADMIN CANCEL DDL JOBS` #12681

- Monitor
  - Add types for backoff monitoring and supplement the backoff time that is not recorded before, such as the backoff time when committing #12326
  - Add a new metric to monitor `Add Index` operation progress #12389

16.18.2.2 PD

- Improve the `--help` command output of pd-ctl #1772

16.18.2.3 Tools

- TiDB Binlog
  - Fix the issue that `ALTER DATABASE` related DDL operations cause Drainer to exit abnormally #770
  - Support querying the transaction status information for Commit binlog to improve replication efficiency #761
  - Fix the issue that a Pump panic might occur when Drainer's `start_ts` is greater than Pump's largest `commit_ts` #759

16.18.2.4 TiDB Ansible

- Add two monitoring items "queue size" and "query histogram" for TiDB Binlog #952
- Update TiDB alerting rules #961
- Check the configuration file before the deployment and upgrade #973
- Add a new metric to monitor index speed in TiDB #987
- Update TiDB Binlog monitoring dashboard to make it compatible with Grafana v4.6.3 #993

16.18.3 TiDB 2.1.17 Release Notes

Release date: September 11, 2019

TiDB version: 2.1.17

TiDB Ansible version: 2.1.17

- New features
  - Add the `WHERE` clause in TiDB's `SHOW TABLE REGIONS` syntax
  - Add the `config-check` feature in TiKV and PD to check the configuration items
  - Add the `remove-tombstone` command in pd-ctl to clear tombstone store records
  - Add the `worker-count` and `txn-batch` configuration items in Reparo to control the recovery speed
- Improvements
  - Optimize PD's scheduling process by supporting actively pushing operators
  - Optimize TiKV's starting process to reduce jitters caused by restarting nodes
- Changed behaviors
  - Change `start ts` in TiDB slow query logs from the last retry time to the first execution time
  - Replace the `Index_ids` field in TiDB slow query logs with the `Index_names` field to improve the usability of slow query logs
  - Add the `split-region-max-num` parameter in TiDB's configuration files to modify the maximum number of Regions allowed by the `SPLIT TABLE` syntax, which is increased from 1,000 to 10,000 in the default configuration

16.18.3.1 TiDB

- SQL Optimizer
  - Fix the issue that the error message is not returned correctly when an error occurs during `EvalSubquery` building `Executor` #11811
  - Fix the issue that the query result might be incorrect when the number of rows in the outer table is greater than that in a single batch in Index Lookup Join; expand the functional scope of Index Lookup Join; `UnionScan` can be used as a subnode of `IndexJoin` #11843
  - Add the display of invalid keys (like `invalid encoded key flag 252`) in the `SHOW STAT_BUCKETS` syntax, for the situation where invalid keys might occur during the statistics feedback process #12098
- SQL Execution Engine
  - Fix some incorrect results (like `select cast(13835058000000000000 as` ↪ `double)`) caused by the number value that is first converted to `UINT` when the `CAST` function is converting the number value type #11712

  - Fix the issue that the calculation result might be incorrect when the dividend of the `DIV` calculation is a decimal and this calculation contains a negative number #11812
  - Add the `ConvertStrToIntStrict` function to fix the MySQL incompatibility issue caused by some strings being converted to the `INT` type when executing the `SELECT/EXPLAIN` statement #11892
  - Fix the issue that the `Explain` result might be incorrect caused by wrong configuration of `stmtCtx` when `EXPLAIN ... FOR CONNECTION` is used #11978
  - Fix the issue that the result returned by the `unaryMinus` function is incompatible with MySQL, caused by the non-decimal result when the integer result overflows #11990
  - Fix the issue that `last_insert_id()` might be incorrect, caused by the counting order when the `LOAD DATA` statement is being executed #11994
  - Fix the issue that `last_insert_id()` might be incorrect when the user writes auto-increment column data in an explicit-implicit mixed way #12001
  - Fix an over-quoted bug for the `JSON_UNQUOTE` function: only values enclosed by double quote marks (") should be unquoted. For example, the result of "`SELECT JSON_UNQUOTE("\\\\")`" should be "\\" (not changed) #12096

- Server
  - Change `start ts` recorded in slow query logs from the last retry time to the first execution time when retrying TiDB transactions #11878
  - Add the number of keys of a transaction in `LockResolver` to avoid the scan operation on the whole Region and reduce costs of resolving locking when the number of keys is reduced #11889
  - Fix the issue that the `succ` field value might be incorrect in slow query logs #11886
  - Replace the `Index_ids` filed in slow query logs with the `Index_names` field to improve the usability of slow query logs #12063
  - Fix the connection break issue caused by TiDB parsing `-` into EOF Error when `Duration` contains `-` (like `select time( '--' )`) #11910
  - Remove an invalid Region from `RegionCache` more quickly to reduce the number of requests sent to this Region #11931
  - Fix the connection break issue caused by incorrectly handling the OOM panic issue when `oom-action = "cancel"` and OOM occurs in the `Insert Into ⋯ Select` syntax #12126

- DDL
  - Add the reverse scan interface for `tikvSnapshot` to efficiently query DDL history jobs. After using this interface, the execution time of `ADMIN SHOW DDL JOBS` is remarkably decreased #11789
  - Improve the `CREATE TABLE ... PRE_SPLIT_REGION` syntax: change the number of pre-splitting Regions from 2^(N-1) to 2^N when `PRE_SPLIT_REGION = N` #11797

  - Decrease the default parameter value for the background worker thread of the `Add Index` operation to avoid great impacts on online workloads #11875
  - Improve the `SPLIT TABLE` syntax behavior: generate N data Region(s) and one index Region when `SPLIT TABLE ... REGIONS N` is used to divide Regions #11929
  - Add the `split-region-max-num` parameter (`10000` by default) in the configuration file to make the maximum number of Regions allowed by the `SPLIT TABLE` syntax adjustable #12080
  - Fix the issue that the `CREATE TABLE` clause cannot be parsed by the downstream MySQL, caused by uncommented `PRE_SPLIT_REGIONS` in this clause when the system writes the binlog #12121
  - Add the `WHERE` sub-clause in `SHOW TABLE ⋯ REGIONS` and `SHOW TABLE .. ↪ INDEX ⋯ REGIONS` #12124

- Monitor
  - Add the `connection_transient_failure_count` monitoring metric to count gRPC connection errors of `tikvclient` #12092

16.18.3.2 TiKV

- Fix the incorrect result of counting keys in a Region in some cases #5415
- Add the `config-check` option in TiKV to check whether the TiKV configuration item is valid #5391
- Optimize the starting process to reduce jitters caused by restarting nodes #5277
- Optimize the resolving locking process in some cases to speed up resolving locking for transactions #5339
- Optimize the `get_txn_commit_info` process to speed up committing transactions #5062
- Simplify Raft-related logs #5425
- Resolve the issue that TiKV exits abnormally in some cases #5441

16.18.3.3 PD

- Add the `config-check` option in PD to check whether the PD configuration item is valid #1725
- Add the `remove-tombstone` command in pd-ctl to support clearing tombstone store records #1705
- Support actively pushing operators to speed up scheduling #1686

16.18.3.4 Tools

- TiDB Binlog
  - Add `worker-count` and `txn-batch` configuration items in Reparo to control the recovery speed #746

  - Optimize the memory usage of Drainer to improve the parallel execution efficiency #735
  - Fix the bug that Pump cannot quit normally in some cases #739
  - Optimize the processing logic of `LevelDB` in Pump to improve the execution efficiency of GC #720

- TiDB Lightning
  - Fix the bug that tidb-lightning might crash caused by re-importing data from the checkpoint #239

16.18.3.5 TiDB Ansible

- Update the Spark version to 2.4.3, and update the TiSpark version to 2.2.0 that is compatible with Spark 2.4.3 #914, #919
- Fix the issue that there is a long waiting time when the remote machine password has expired #937, #948

16.18.4 TiDB 2.1.16 Release Notes

Release date: August 15, 2019

TiDB version: 2.1.16

TiDB Ansible version: 2.1.16

16.18.4.1 TiDB

- SQL Optimizer
  - Fix the issue that row count is estimated inaccurately for the equal condition on the time column #11526
  - Fix the issue that `TIDB_INLJ` Hint does not take effect or take effect on the specified table #11361
  - Change the implementation of `NOT EXISTS` in a query from OUTER JOIN to ANTI JOIN to find a more optimized execution plan #11291
  - Support subqueries within `SHOW` statements, allowing syntaxes such as `SHOW ↪ COLUMNS FROM tbl WHERE FIELDS IN (SELECT 'a')` #11461
  - Fix the issue that the `SELECT ⋯ CASE WHEN ⋯ ELSE NULL ...` query gets an incorrect result caused by the constant folding optimization #11441

- SQL Execution Engine
  - Fix the issue that the `DATE_ADD` function gets a wrong result when `INTERVAL` is negative #11616
  - Fix the issue that the `DATE_ADD` function might get an incorrect result because it performs type conversion wrongly when it accepts an argument of the `FLOAT`, `DOUBLE`, or `DECIMAL` type #11628

  - Fix the issue that the error message is inaccurate when CAST(JSON AS SIGNED) overflows #11562
  - Fix the issue that other child nodes are not closed when one child node fails to be closed and returns an error during the process of closing Executor #11598
  - Support `SPLIT TABLE` statements that return the number of Regions that are successfully split and a finished percentage rather than an error when the scheduling is not finished for Region scatter before the timeout #11487
  - Make `REGEXP BINARY` function case sensitive to be compatible with MySQL #11505
  - Fix the issue that `NULL` is not returned correctly because the value of `YEAR` in the `DATE_ADD/DATE_SUB` result overflows when it is smaller than 0 or larger than 65535 #11477
  - Add in the slow query table a `Succ` field that indicates whether the execution succeeds #11412
  - Fix the MySQL incompatibility issue caused by fetching the current timestamp multiple times when a SQL statement involves calculations of the current time (such as `CURRENT_TIMESTAMP` or `NOW`) #11392
  - Fix the issue that the AUTO_INCREMENT columns do not handle the FLOAT or DOUBLE type #11389
  - Fix the issue that `NULL` is not returned correctly when the `CONVERT_TZ` function accepts an invalid argument #11357
  - Fix the issue that an error is reported by the `PARTITION BY LIST` statement. (Currently only the syntax is supported; when TiDB executes the statement, a regular table is created and a prompting message is provided) #11236
  - Fix the issue that `Mod(%)`, `Multiple(*)`, and `Minus(-)` operations return an inconsistent `0` result with that in MySQL when there are many decimal digits (such as `select 0.000 % 0.11234500000000000000`) #11353

- Server
  - Fix the issue that the plugin gets a `NULL` domain when `OnInit` is called back #11426
  - Fix the issue that the table information in a schema can still be obtained through the HTTP interface after the schema has been deleted #11586

- DDL
  - Disallow dropping indexes on auto-increment columns to avoid incorrect results of the auto-increment columns caused by this operation #11402
  - Fix the issue that the character set of the column is not correct when creating and modifying the table with different character sets and collations #11423
  - Fix the issue that the column schema might get wrong when `alter table ... ↪ set default...` and another DDL statement that modifies this column are executed in parallel #11374
  - Fix the issue that data fails to be backfilled when Generated Column A depends on Generated Column B and A is used to create an index #11538
  - Speed up `ADMIN CHECK TABLE` operations #11538

16.18.4.2 TiKV

- Support returning an error message when the client accesses a TiKV Region that is being closed #4820
- Support reverse `raw_scan` and `raw_batch_scan` interfaces #5148

16.18.4.3 Tools

- TiDB Binlog
  - Add the `ignore-txn-commit-ts` configuration item in Drainer to skip executing some statements in a transaction #697
  - Add the configuration item check on startup, which stops Pump and Drainer from running and returns an error message when meeting invalid configuration items #708
  - Add the `node-id` configuration in Drainer to specify Drainer's node ID #706
- TiDB Lightning
  - Fix the issue that `tikv_gc_life_time` fails to be changed back to its original value when 2 checksums are running at the same time #224

16.18.4.4 TiDB Ansible

- Add the `log4j` configuration file in Spark #842
- Update the tispark jar package to v2.1.2 #863
- Fix the issue that the Prometheus configuration file is generated in the wrong format when TiDB Binlog uses Kafka or ZooKeeper #845
- Fix the bug that PD fails to switch the Leader when executing the `rolling_update.yml` operation #888
- Optimize the logic of rolling updating PD nodes - upgrade Followers first and then the Leader - to improve stability #895

16.18.5 TiDB 2.1.15 Release Notes

Release date: July 16, 2019

TiDB version: 2.1.15

TiDB Ansible version: 2.1.15

16.18.5.1 TiDB

- Fix the issue that the `DATE_ADD` function returns wrong results due to incorrect alignment when dealing with microseconds #11289
- Fix the issue that an error is reported when the empty value in the string column is compared with `FLOAT` or `INT` #11279
- Fix the issue that the `INSERT` function fails to correctly return the `NULL` value when a parameter is `NULL` #11249
- Fix the issue that an error occurs when indexing the column of the non-string type and `0` length #11215
- Add the `SHOW TABLE REGIONS` statement to query the Region distribution of a table through SQL statements #11238
- Fix the issue that an error is reported when using the `UPDATE ··· SELECT` statement because the projection elimination is used to optimize rules in the `SELECT` subqueries #11254
- Add the `ADMIN PLUGINS ENABLE/ADMIN PLUGINS DISABLE` SQL statement to dynamically enable or disable plugins #11189
- Add the session connection information in the Audit plugin #11189
- Fix the panic issue that happens when a column is queried on multiple times and the returned result is `NULL` during point queries #11227
- Add the `tidb_scatter_region` configuration item to scatter table Regions when creating a table #11213
- Fix the data race issue caused by non-thread safe `rand.Rand` when using the `RAND` function #11170
- Fix the issue that the comparison result of integers and non-integers is incorrect in some cases #11191
- Support modifying the collation of a database or a table, but the character set of the database/table has to be UTF-8 or utf8mb4 #11085
- Fix the issue that the precision shown by the `SHOW CREATE TABLE` statement is incomplete when `CURRENT_TIMESTAMP` is used as the default value of the column and the float precision is specified #11087

16.18.5.2 TiKV

- Unify the log format #5083
- Improve the accuracy of Region's approximate size or keys in extreme cases to improve the accuracy of scheduling #5085

16.18.5.3 PD

- Unify the log format #1625

16.18.5.4 Tools

TiDB Binlog

- Optimize the Pump GC strategy and remove the restriction that the unconsumed binlog cannot be cleaned to make sure that the resources are not occupied for a long time #663

TiDB Lightning

- Fix the import error that happens when the column names specified by the SQL dump are not in lowercase #210

16.18.5.5 TiDB Ansible

- Add the `parse duration` and `compile duration` monitoring items in TiDB Dashboard to monitor the time that it takes to parse SQL statements and execute compilation #815

16.18.6 TiDB 2.1.14 Release Notes

Release date: July 04, 2019

TiDB version: 2.1.14

TiDB Ansible version: 2.1.14

16.18.6.1 TiDB

- Fix wrong query results caused by column pruning in some cases #11019
- Fix the wrongly displayed information in `db` and `info` columns of `show processlist` #11000
- Fix the issue that `MAX_EXECUTION_TIME` as a SQL hint and global variable does not work in some cases #10999
- Support automatically adjust the incremental gap allocated by auto-increment ID based on the load #10997
- Fix the issue that the `Distsql` memory information of `MemTracker` is not correctly cleaned when a query ends #10971
- Add the `MEM` column in the `information_schema.processlist` table to describe the memory usage of a query #10896
- Add the `max_execution_time` global system variable to control the maximum execution time of a query #10940
- Fix the panic caused by using unsupported aggregate functions #10911
- Add an automatic rollback feature for the last transaction when the `load data` statement fails #10862

- Fix the issue that TiDB returns a wrong result in some cases when the `OOMAction` configuration item is set to `Cancel` #11016
- Disable the `TRACE` statement to avoid the TiDB panic issue #11039
- Add the `mysql.expr_pushdown_blacklist` system table that dynamically enables/disables pushing down specific functions to Coprocessor #10998
- Fix the issue that the `ANY_VALUE` function does not work in the `ONLY_FULL_GROUP_BY` mode #10994
- Fix the incorrect evaluation caused by not doing a deep copy when evaluating the user variable of the string type #11043

16.18.6.2 TiKV

- Optimize processing the empty callback when processing the Raftstore message to avoid sending unnecessary message #4682

16.18.6.3 PD

- Adjust the log output level from `Error` to `Warning` when reading an invalid configuration item #1577

16.18.6.4 Tools

TiDB Binlog

- Reparo
  - Add the `safe-mode` configuration item, and support importing duplicated data after this item is enabled #662
- Pump
  - Add the `stop-write-at-available-space` configuration item to limit the available binlog space #659
  - Fix the issue that Garbage Collector does not work sometimes when the number of LevelDB L0 files is 0 #648
  - Optimize the algorithm of deleting log files to speed up releasing the space #648
- Drainer
  - Fix the failure to update `BIT` columns in the downstream #655

16.18.6.5 TiDB Ansible

- Add the precheck feature for the `ansible` command and its `jmespath` and `jinja2` dependency packages #807
- Add the `stop-write-at-available-space` parameter (10 GiB by default) in Pump, and stop writing binlog files in Pump when the available disk space is less than the parameter value #807

16.18.7 TiDB 2.1.13 Release Notes

Release date: June 21, 2019

TiDB version: 2.1.13

TiDB Ansible version: 2.1.13

16.18.7.1 TiDB

- Add a feature to use `SHARD_ROW_ID_BITS` to scatter row IDs when the column contains an `AUTO_INCREMENT` attribute to relieve the hotspot issue #10788
- Optimize the lifetime of invalid DDL metadata to speed up recovering the normal execution of DDL operations after upgrading the TiDB cluster #10789
- Fix the OOM issue in high concurrent scenarios caused by the failure to quickly release Coprocessor resources, resulted from the `execdetails.ExecDetails` pointer #10833
- Add the `update-stats` configuration item to control whether to update statistics #10772
- Add the following TiDB-specific syntax to support Region presplit to solve the hotspot issue:
- Add the `PRE_SPLIT_REGIONS` table option #10863
- Add the `SPLIT TABLE table_name INDEX index_name` syntax #10865
- Add the `SPLIT TABLE [table_name] BETWEEN (min_value...)AND (max_value ...)REGIONS [region_num]` syntax #10882
- Fix the panic issue caused by the `KILL` syntax in some cases #10879
- Improve the compatibility with MySQL for `ADD_DATE` in some cases #10718
- Fix the wrong estimation for the selectivity rate of the inner table selection in index join #10856

16.18.7.2 TiKV

- Fix the issue that incomplete snapshots are generated in the system caused by the iterator not checking the status #4940
- Add a feature to check the validity for the `block-size` configuration #4930

16.18.7.3 Tools

- TiDB Binlog
  - Fix the wrong offset issue caused by Pump not checking the returned value when it fails to write data #640
  - Add the `advertise-addr` configuration in Drainer to support the bridge mode in the container environment #634

16.18.8 TiDB 2.1.12 Release Notes

Release date: June 13, 2019

TiDB version: 2.1.12

TiDB Ansible version: 2.1.12

16.18.8.1 TiDB

- Fix the issue caused by unmatched data types when using the index query feedback #10755
- Fix the issue that the blob column is changed to the text column caused by charset altering in some cases #10745
- Fix the issue that the `GRANT` operation in the transaction mistakenly reports "Duplicate Entry" in some cases #10739
- Improve the compatibility with MySQL of the following features
  - The `DAYNAME` function #10732
  - The `MONTHNAME` function #10733
  - Support the 0 value for the `EXTRACT` function when processing `MONTH` #10702
  - The `DECIMAL` type can be converted to `TIMESTAMP` or `DATETIME` #10734
- Change the column charset while changing the table charset #10714
- Fix the overflow issue when converting a decimal to a float in some cases #10730
- Fix the issue that some extremely large messages report the "grpc: received message larger than max" error caused by inconsistent maximum sizes of messages sent/received by gRPC of TiDB and TiKV #10710
- Fix the panic issue caused by `ORDER BY` not filtering NULL in some cases #10488
- Fix the issue that values returned by the `UUID` function might be duplicate when multiple nodes exist #10711
- Change the value returned by `CAST(-num as datetime)` from `error` to NULL #10703
- Fix the issue that an unsigned histogram meets signed ranges in some cases #10695
- Fix the issue that an error is reported mistakenly for reading data when the statistics feedback meets the bigint unsigned primary key #10307
- Fix the issue that the result of `Show Create Table` for partitioned tables is not correctly displayed in some cases #10690
- Fix the issue that the calculation result of the `GROUP_CONCAT` aggregate function is not correct for some correlated subqueries #10670
- Fix the issue that the result is wrongly displayed when the memory table of slow queries parses the slow query log in some cases #10776

16.18.8.2 PD

- Fix the issue that etcd leader election is blocked in extreme conditions #1576

16.18.8.3 TiKV

- Fix the issue that Regions are not available during the leader transfer process in extreme conditions #4799
- Fix the issue that TiKV loses data when the power of the machine fails abnormally, caused by delayed data flush to the disk when receiving snapshots #4850

16.18.9 TiDB 2.1.11 Release Notes

Release date: June 03, 2019

TiDB version: 2.1.11

TiDB Ansible version: 2.1.11

16.18.9.1 TiDB

- Fix the issue that incorrect schema is used for `delete from join` #10595
- Fix the issue that the built-in `CONVERT()` may return incorrect field type #10263
- Merge non-overlapped feedback when updating bucket count #10569
- Fix calculation errors of `unix_timestamp()-unix_timestamp(now())` #10491
- Fix the incompatibility issue of `period_diff` with MySQL 8.0 #10501
- Skip `Virtual Column` when collecting statistics to avoid exceptions #10628
- Support the `SHOW OPEN TABLES` statement #10374
- Fix the issue that goroutine leak may happen in some cases #10656
- Fix the issue that setting the `tidb_snapshot` variable in some cases may cause incorrect parsing of time format #10637

16.18.9.2 PD

- Fix the issue that hots Region may fail to be scheduled due to `balance-region` #1551
- Set hotspot related scheduling priorities to high #1551
- Add two configuration items #1551
  - `hot-region-schedule-limit` to control the maximum number of concurrent hotspot scheduling tasks
  - `hot-region-cache-hits-threshold` to identify a hot Region

16.18.9.3 TiKV

- Fix the issue that the learner reads an empty index when there is only one leader and one learner #4751
- Process `ScanLock` and `ResolveLock` in the thread pool with a high priority to reduce their impacts on commands with a normal priority #4791
- Sync all files of received snapshots #4811

16.18.9.4 Tools

- TiDB Binlog
  - Limit data deletion speed during GC to avoid QPS degrading caused by `WritePause` #620

16.18.9.5 TiDB Ansible

- Add Drainer parameters #760

16.18.10 TiDB 2.1.10 Release Notes

Release date: May 22, 2019

TiDB version: 2.1.10

TiDB Ansible version: 2.1.10

16.18.10.1 TiDB

- Fix the issue that some abnormalities cause incorrect table schema when using `tidb_snapshot` to read the history data #10359
- Fix the issue that the `NOT` function causes wrong read results in some cases #10363
- Fix the wrong behavior of `Generated Column` in the `Replace` or `Insert on duplicate update` statement #10385
- Fix a bug of the `BETWEEN` function in the `DATE/DATETIME` comparison #10407
- Fix the issue that a single line of a slow log that is too long causes an error report when using the `SLOW_QUERY` table to query a slow log #10412
- Fix the issue that the result of `DATETIME` plus `INTERVAL` is not the same with that of MySQL in some cases #10416, #10418
- Add the check for the invalid time of February in a leap year #10417
- Execute the internal initialization operation limitation only in the DDL owner to avoid a large number of conflict error reports when initializing the cluster #10426
- Fix the issue that `DESC` is incompatible with MySQL when the default value of the output timestamp column is `default current_timestamp on update current_timestamp` #10337
- Fix the issue that an error occurs during the privilege check in the `Update` statement #10439
- Fix the issue that wrong calculation of `RANGE` causes a wrong result in the `CHAR` column in some cases #10455
- Fix the issue that the data might be overwritten after decreasing `SHARD_ROW_ID_BITS` #9868
- Fix the issue that `ORDER BY RAND()` does not return random numbers #10064
- Prohibit the `ALTER` statement modifying the precision of decimals #10458

- Fix the compatibility issue of the `TIME_FORMAT` function with MySQL #10474
- Check the parameter validity of `PERIOD_ADD` #10430
- Fix the issue that the behavior of the invalid `YEAR` string in TiDB is incompatible with that in MySQL #10493
- Support the `ALTER DATABASE` syntax #10503
- Fix the issue that the `SLOW_QUERY` memory engine reports an error when no `;` exists in the slow query statement #10536
- Fix the issue that the `Add index` operation in partitioned tables cannot be canceled in some cases #10533
- Fix the issue that the OOM panic cannot be recovered in some cases #10545
- Improve the security of the DDL operation rewriting the table metadata #10547

16.18.10.2 PD

- Fix the issue that the priority of the leader does not take effect #1533

16.18.10.3 TiKV

- Reject transferring the leader in a Region whose configuration has been changed recently to avoid transfer failure #4684
- Add the priority label for Coprocessor metrics #4643
- Fix the possible dirty read issue during transferring the leader #4724
- Fix the issue that `CommitMerge` causes the restart failure of TiKV in some cases #4615
- Fix unknown logs #4730

16.18.10.4 Tools

- TiDB Lightning
  - Add the retry feature when TiDB Lightning fails to send data to `importer` #176
- TiDB Binlog
  - Optimize the Pump storage log to facilitate troubleshooting #607

16.18.10.5 TiDB Ansible

- Update the configuration file of TiDB Lightning and add the `tidb_lightning_ctl` script #d3a4a368

16.18.11 TiDB 2.1.9 Release Notes

Release date: May 6, 2019

TiDB version: 2.1.9

TiDB Ansible version: 2.1.9

16.18.11.1 TiDB

- Fix compatibility of the `MAKETIME` function when unsigned type overflows #10089
- Fix the stack overflow caused by constant folding in some cases #10189
- Fix the privilege check issue for `Update` when an alias exists in some cases #10157, #10326
- Track and control memory usage in DistSQL #10197
- Support specifying collation as `utf8mb4_0900_ai_ci` #10201
- Fix the wrong result issue of the `MAX` function when the primary key is of the Unsigned type #10209
- Fix the issue that NULL values can be inserted into NOT NULL columns in the non-strict SQL mode #10254
- Fix the wrong result issue of the `COUNT` function when multiple columns exist in `DISTINCT` #10270
- Fix the panic issue occurred when `LOAD DATA` parses irregular CSV files #10269
- Ignore the overflow error when the outer and inner join key types are inconsistent in `Index Lookup Join` #10244
- Fix the issue that a statement is wrongly judged as point-get in some cases #10299
- Fix the wrong result issue when the time type does not convert the time zone in some cases #10345
- Fix the issue that TiDB character set cases are inconsistent in some cases #10354
- Support controlling the number of rows returned by operator #9166
  - Selection & Projection #10110
  - `StreamAgg` & `HashAgg` #10133
  - `TableReader` & `IndexReader` & `IndexLookup` #10169
- Improve the slow query log
  - Add `SQL Digest` to distinguish similar SQL #10093
  - Add version information of statistics used by slow query statements #10220
  - Show memory consumption of a statement in slow query log #10246
  - Adjust the output format of Coprocessor related information so it can be parsed by pt-query-digest #10300
  - Fix the `#` character issue in slow query statements #10275
  - Add some information columns to the memory table of slow query statements #10317
  - Add the transaction commit time to slow query log #10310
  - Fix the issue some time formats cannot be parsed by pt-query-digest #10323

16.18.11.2 PD

- Support the GetOperator service #1514

16.18.11.3 TiKV

- Fix potential quorum changes when transferring leader #4604

16.18.11.4 Tools

- TiDB Binlog
  - Fix the issue that data replication is interrupted because data in the unsigned int type of primary key column are minus numbers #574
  - Remove the compression option when the downstream is `pb` and change the downstream name from `pb` to `file` #597
  - Fix the bug that Reparo introduced in 2.1.7 generates wrong `UPDATE` statements #576
- TiDB Lightning
  - Fix the bug that the bit type of column data is incorrectly parsed by the parser #164
  - Fill the lacking column data in dump files using row id or the default column value #174
  - Fix the Importer bug that some SST files fail to be imported but it still returns successful import result #4566
  - Support setting a speed limit in Importer when uploading SST files to TiKV #4607
  - Change Importer RocksDB SST compression method to `lz4` to reduce CPU consumption #4624
- sync-diff-inspector
  - Support checkpoint #227

16.18.11.5 TiDB Ansible

- Update links in tidb-ansible documentation according to docs refactoring #740, #741
- Remove the `enable_slow_query_log` parameter in the `inventory.ini` file and output the slow query log to a separate log file by default #742

16.18.12 TiDB 2.1.8 Release Notes

Release date: April 12, 2019

TiDB version: 2.1.8

TiDB Ansible version: 2.1.8

16.18.12.1 TiDB

- Fix the issue that the processing logic of `GROUP_CONCAT` function is incompatible with MySQL when there is a NULL-valued parameter #9930
- Fix the equality check issue of decimal values in the `Distinct` mode #9931

- Fix the collation compatibility issue of the date, datetime, and timestamp types for the `SHOW FULL COLUMNS` statement
  - #9938
  - #10114
- Fix the issue that the row count estimation is inaccurate when the filtering condition contains correlated columns #9937
- Fix the compatibility issue between the `DATE_ADD` and `DATE_SUB` functions
  - #9963
  - #9966
- Support the `%H` format for the `STR_TO_DATE` function to improve compatibility #9964
- Fix the issue that the result is wrong when the `GROUP_CONCAT` function groups by a unique index #9969
- Return a warning when the Optimizer Hints contains an unmatched table name #9970
- Unify the log format to facilitate collecting logs using tools for analysis Unified Log Format
- Fix the issue that a lot of NULL values cause inaccurate statistics estimation #9979
- Fix the issue that an error is reported when the default value of the TIMESTAMP type is the boundary value #9987
- Validate the value of `time_zone` #10000
- Support the `2019.01.01` time format #10001
- Fix the issue that the row count estimation is displayed incorrectly in the result returned by the `EXPLAIN` statement in some cases #10044
- Fix the issue that `KILL TIDB [session id]` cannot instantly stop the execution of a statement in some cases #9976
- Fix the predicate pushdown issue of constant filtering conditions in some cases #10049
- Fix the issue that a read-only statement is not processed correctly in some cases #10048

16.18.12.2 PD

- Fix the issue that `regionScatterer` might generate an invalid `OperatorStep` #1482
- Fix the issue that a hot store makes incorrect statistics of keys #1487
- Fix the too short timeout issue of the `MergeRegion` operator #1495
- Add elapsed time metrics of the PD server handling TSO requests #1502

16.18.12.3 TiKV

- Fix the issue of wrong statistics of the read traffic #4441
- Fix the raftstore performance issue when too many Regions exist #4484
- Do not ingest files when the number of level 0 SST files exceeds `level_zero_slowdown_writes_trigg`
  ↪ `/2` #4464

16.18.12.4 Tools

- Optimize the order of importing tables for Lightning to reduce the effects of large tables executing `Checksum` and `Analyze` on the cluster during the importing process and improve the success rate of `Checksum` and `Analyze` #156
- Improve the encoding SQL performance by 50% for Lightning by directly parsing the data source file content to `types.Datum` of TiDB to avoid additional parsing working of the KV encoder #145
- Add the `storage.sync-log` configuration item in TiDB Binlog Pump to support flushing disks of the local storage asynchronously in Pump #529
- Support traffic compression of communication between TiDB Binlog Pump and Drainer #530
- Add the `syncer.sql-mode` configuration item in TiDB Binlog Drainer to support using different `sql-mode`s to parse DDL queries #513
- Add the `syncer.ignore-table` configuration item in TiDB Binlog Drainer to support filtering tables not to be replicated #526

16.18.12.5 TiDB Ansible

- Modify the version limit for the operating system and only support CentOS 7.0 or later and Red Hat 7.0 or later #734
- Add the feature of checking whether `epollexclusive` is supported in every OS #728
- Add the version limit for rolling update to prohibit upgrading a version of 2.0.1 or earlier to a version of 2.1 or later #728

16.18.13 TiDB 2.1.7 Release Notes

Release Date: March 28, 2019

TiDB version: 2.1.7

TiDB Ansible version: 2.1.7

16.18.13.1 TiDB

- Fix the issue of longer startup time when upgrading the program caused by canceling DDL operations #9768
- Fix the issue that the `check-mb4-value-in-utf8` configuration item is in the wrong position in the `config.example.toml` file #9852
- Improve the compatibility of the `str_to_date` built-in function with MySQL #9817
- Fix the compatibility issue of the `last_day` built-in function #9750
- Add the `tidb_table_id` column for `infoschema.tables` to facilitate getting `table_id` ↪ by using SQL statements and add the `tidb_indexes` system table to manage the relationship between Table and Index #9862

- Add a check about the null definition of Table Partition #9663
- Change the privileges required by `Truncate Table` from `Delete` to `Drop` to make it consistent with MySQL #9876
- Support using subqueries in the `DO` statement #9877
- Fix the issue that the `default_week_format` variable does not take effect in the `week` function #9753
- Support the plugin framework #9880, #9888
- Support checking the enabling state of binlog by using the `log_bin` system variable #9634
- Support checking the Pump/Drainer status by using SQL statements #9896
- Fix the compatibility issue about checking mb4 character on utf8 when upgrading TiDB #9887
- Fix the panic issue when the aggregate function calculates JSON data in some cases #9927

16.18.13.2 PD

- Fix the issue that the transferring leader step cannot be created in the balance-region when the number of replicas is one #1462

16.18.13.3 Tools

- Support replicating generated columns by using binlog

16.18.13.4 TiDB Ansible

Change the default retention time of Prometheus monitoring data to 30d

16.18.14 TiDB 2.1.6 Release Notes

On March 15, 2019, TiDB 2.1.6 is released. The corresponding TiDB Ansible 2.1.6 is also released. Compared with TiDB 2.1.5, this release has greatly improved the stability, the SQL optimizer, statistics, and the execution engine.

16.18.14.1 TiDB

- SQL Optimizer/Executor
  - Optimize planner to select the outer table based on cost when both tables are specified in Hint of `TIDB_INLJ` #9615
  - Fix the issue that `IndexScan` cannot be selected correctly in some cases #9587
  - Fix incompatibility with MySQL of check in the `agg` function in subqueries #9551
  - Make `show stats_histograms` only output valid columns to avoid panics #9502

- Server
  - Support the `log_bin` variable to enable/disable Binlog #9634
  - Add a sanity check for transactions to avoid false transaction commit #9559
  - Fix the issue that setting variables may lead to panic #9539
- DDL
  - Fix the issue that the `Create Table Like` statement causes panic in some cases #9652
  - Enable the `AutoSync` feature of etcd clients to avoid connection issues between TiDB and etcd in some cases #9600

16.18.14.2 TiKV

- Fix the issue that a `protobuf` parsing failure would in some cases cause a `StoreNotMatch` error #4303

16.18.14.3 Tools

- Lightning
  - Change the default `region-split-size` of importer to 512 MiB #4369
  - Save the intermediate SST previously cached in memory to the local disk to reduce memory usage #4369
  - Limit the memory usage of RocksDB #4369
  - Fix the issue that Regions are scattered before scheduling is finished #4369
  - Separate importing of data and indexes for large tables to effectively reduce time consumption when importing in batches #132
  - Support CSV #111
  - Fix the error of import failure due to non-alphanumeric characters in schema names #9547

16.18.15 TiDB 2.1.5 Release Notes

On February 28, 2019, TiDB 2.1.5 is released. The corresponding TiDB Ansible 2.1.5 is also released. Compared with TiDB 2.1.4, this release has greatly improved the stability, the SQL optimizer, statistics, and the execution engine.

16.18.15.1 TiDB

- SQL Optimizer/Executor
  - Make `SHOW CREATE TABLE` do not print the column charset information when the charset information of a column is the same with that of a table, to improve the compatibility of `SHOW CREATE TABLE` with MySQL #9306

  - Fix the panic or the wrong result of the `Sort` operator in some cases by extracting `ScalarFunc` from `Sort` to a `Projection` operator for computing to simplify the computing logic of `Sort` #9319
  - Remove the sorting field with constant values in the `Sort` operator #9335, #9440
  - Fix the data overflow issue when inserting data into an unsigned integer column #9339
  - Set `cast_as_binary` to `NULL` when the length of the target binary exceeds `max_allowed_packet` #9349
  - Optimize the constant folding process of `IF` and `IFNULL` #9351
  - Optimize the index selection of TiDB using skyline pruning to improve the stability of simple queries #9356
  - Support computing the selectivity of the `DNF` expression #9405
  - Fix the wrong SQL query result of `!=ANY()` and `=ALL()` in some cases #9403
  - Fix the panic or the wrong result when the Join Key types of two tables on which the `Merge Join` operation is performed are different #9438
  - Fix the issue that the result of the `RAND()` function is not compatible with MySQL #9446
  - Refactor the logic of `Semi Join` processing `NULL` and the empty result set to get the correct result and improve the compatibility with MySQL #9449

- Server

  - Add the `tidb_constraint_check_in_place` system variable to check the data uniqueness constraint when executing the `INSERT` statement #9401
  - Fix the issue that the value of the `tidb_force_priority` system variable is different from that set in the configuration file #9347
  - Add the `current_db` field in general logs to print the name of the currently used database #9346
  - Add an HTTP API of obtaining the table information with the table ID #9408
  - Fix the issue that `LOAD DATA` loads incorrect data in some cases #9414
  - Fix the issue that it takes a long time to build a connection between the MySQL client and TiDB in some cases #9451

- DDL

  - Fix some issues when canceling the `DROP COLUMN` operation #9352
  - Fix some issues when canceling the `DROP` or `ADD` partitioned table operation #9376
  - Fix the issue that `ADMIN CHECK TABLE` mistakenly reports the data index inconsistency in some cases #9399
  - Fix the time zone issue of the `TIMESTAMP` default value #9108

16.18.15.2 PD

- Provide the `exclude_tombstone_stores` option in the `GetAllStores` interface to remove the Tombstone store from the returned result #1444

16.18.15.3 TiKV

- Fix the issue that Importer fails to import data in some cases #4223
- Fix the `KeyNotInRegion` error in some cases #4125
- Fix the panic issue caused by Region merge in some cases #4235
- Add the detailed `StoreNotMatch` error message #3885

16.18.15.4 Tools

- Lightning
  - Do not report an error or exit when a Tombstone store exists in the cluster #4223
- TiDB Binlog
  - Update the DDL binlog replication plan to guarantee the correctness of DDL event replication #9304

16.18.16 TiDB 2.1.4 Release Notes

On February 15, 2019, TiDB 2.1.4 is released. The corresponding TiDB Ansible 2.1.4 is also released. Compared with TiDB 2.1.3, this release has greatly improved the stability, the SQL optimizer, statistics, and the execution engine.

16.18.16.1 TiDB

- SQL Optimizer/Executor
  - Fix the issue that the `VALUES` function does not handle the FLOAT type correctly #9223
  - Fix the wrong result issue when casting Float to String in some cases #9227
  - Fix the wrong result issue of the `FORMAT` function in some cases #9235
  - Fix the panic issue when handling the Join query in some cases #9264
  - Fix the issue that the `VALUES` function does not handle the ENUM type correctly #9280
  - Fix the wrong result issue of `DATE_ADD`/`DATE_SUB` in some cases #9284
- Server
  - Optimize the "reload privilege success" log and change it to the DEBUG level #9274
- DDL
  - Change `tidb_ddl_reorg_worker_cnt` and `tidb_ddl_reorg_batch_size` to global variables #9134
  - Fix the bug caused by adding an index to a generated column in some abnormal conditions #9289

16.18.16.2 TiKV

- Fix the duplicate write issue when closing TiKV #4146
- Fix the abnormal result issue of the event listener in some cases #4132

16.18.16.3 Tools

- Lightning
  - Optimize the memory usage #107, #108
  - Remove the chunk separation of dump files to avoid an extra parsing of dump files #109
  - Limit the I/O concurrency of reading dump files, to avoid performance degradation caused by too many cache misses #110
  - Support importing data in batches for a single table, to improve import stability #110
  - Enable auto compactions in the import mode in TiKV #4199
  - Support disabling the TiKV periodic Level-1 compaction parameter, because the Level-1 compaction is automatically executed in the import mode when the TiKV cluster version is 2.1.4 or later #119
  - Limit the number of import engines to avoid consuming too much importer disk space #119
- Support splitting chunks using the TiDB statistics in sync-diff-inspector #197

16.18.17 TiDB 2.1.3 Release Notes

On January 28, 2019, TiDB 2.1.3 is released. The corresponding TiDB Ansible 2.1.3 is also released. Compared with TiDB 2.1.2, this release has great improvement in system stability, SQL optimizer, statistics information, and execution engine.

16.18.17.1 TiDB

- SQL Optimizer/Executor
  - Fix the panic issue of Prepared Plan Cache in some cases #8826
  - Fix the issue that Range computing is wrong when the index is a prefix index #8851
  - Make `CAST(str AS TIME(N))` return null if the string is in the illegal `TIME` format when `SQL_MODE` is not strict #8966
  - Fix the panic issue of Generated Column during the process of `UPDATE` in some cases #8980
  - Fix the upper bound overflow issue of the statistics histogram in some cases #8989
  - Support Range for `_tidb_rowid` construction queries, to avoid full table scan and reduce cluster stress #9059

  - Return an error when the `CAST(AS TIME)` precision is too big #9058
  - Allow using `Sort Merge Join` in the Cartesian product #9037
  - Fix the issue that the statistics worker cannot resume after the panic in some cases #9085
  - Fix the issue that `Sort Merge Join` returns the wrong result in some cases #9046
  - Support returning the JSON type in the `CASE` clause #8355

- Server

  - Return a warning instead of an error when the non-TiDB hint exists in the comment #8766
  - Verify the validity of the configured TIMEZONE value #8879
  - Optimize the `QueryDurationHistogram` metrics item to display more statement types #8875
  - Fix the lower bound overflow issue of bigint in some cases #8544
  - Support the `ALLOW_INVALID_DATES` SQL mode #9110

- DDL

  - Fix a `RENAME TABLE` compatibility issue to keep the behavior consistent with that of MySQL #8808
  - Support making concurrent changes of `ADD INDEX` take effect immediately #8786
  - Fix the `UPDATE` panic issue during the process of `ADD COLUMN` in some cases #8906
  - Fix the issue of concurrently creating Table Partition in some cases #8902
  - Support converting the `utf8` character set to `utf8mb4` #8951 #9152
  - Fix the issue of Shard Bits overflow #8976
  - Support outputting the column character sets in `SHOW CREATE TABLE` #9053
  - Fix the issue of the maximum length limit of the varchar type column in `utf8mb4` #8818
  - Support `ALTER TABLE TRUNCATE TABLE PARTITION` #9093
  - Resolve the charset when the charset is not provided #9147

16.18.17.2 PD

- Fix the Watch issue related to leader election #1396

16.18.17.3 TiKV

- Support obtaining the monitoring information using the HTTP method #3855
- Fix the NULL issue of `data_format` #4075
- Add verifying the range for scan requests #4124

16.18.17.4 Tools

- TiDB Binlog

- Fix the `no available pump` issue while TiDB is started or restarted #157
- Enable outputting the Pump client log #165
- Fix the data inconsistency issue caused by the unique key containing the NULL value when the table only has the unique key and does not have the primary key

16.18.18 TiDB 2.1.2 Release Notes

On December 22, 2018, TiDB 2.1.2 is released. The corresponding TiDB Ansible 2.1.2 is also released. Compared with TiDB 2.1.1, this release has great improvement in system compatibility and stability.

16.18.18.1 TiDB

- Make TiDB compatible with TiDB Binlog of the Kafka version #8747
- Improve the exit mechanism of TiDB in a rolling update #8707
- Fix the panic issue caused by adding the index for the generated column in some cases #8676
- Fix the issue that the optimizer cannot find the optimal query plan when `TIDB_SMJ` ↪ `Hint` exists in the SQL statement in some cases #8729
- Fix the issue that `AntiSemiJoin` returns an incorrect result in some cases #8730
- Improve the valid character check of the `utf8` character set #8754
- Fix the issue that the field of the time type might return an incorrect result when the write operation is performed before the read operation in a transaction #8746

16.18.18.2 PD

- Fix the Region information update issue about Region merge #1377

16.18.18.3 TiKV

- Support the configuration format in the unit of `DAY` (`d`) and fix the configuration compatibility issue #3931
- Fix the possible panic issue caused by `Approximate Size Split` #3942
- Fix two issues about Region merge #3822, #3873

16.18.18.4 Tools

- TiDB Lightning
  - Make TiDB 2.1.0 the minimum cluster version supported by Lightning
  - Fix the content error of the file involving parsed `JSON` data in Lightning #144
  - Fix the issue that `Too many open engines` occurs after the checkpoint is used to restart Lightning

- TiDB Binlog
  - Eliminate some bottlenecks of Drainer writing data to Kafka
  - Support the Kafka version of TiDB Binlog

16.18.19 TiDB 2.1.1 Release Notes

On December 12, 2018, TiDB 2.1.1 is released. Compared with TiDB 2.1.0, this release has great improvement in stability, SQL optimizer, statistics information, and execution engine.

16.18.19.1 TiDB

- SQL Optimizer/Executor
  - Fix the round error of the negative date #8574
  - Fix the issue that the `uncompress` function does not check the data length #8606
  - Reset bind arguments of the `prepare` statement after the `execute` command is executed #8652
  - Support automatically collecting the statistics information of a partition table #8649
  - Fix the wrongly configured integer type when pushing down the `abs` function #8628
  - Fix the data race on the JSON column #8660
- Server
  - Fix the issue that the transaction obtained TSO is incorrect when PD breaks down #8567
  - Fix the bootstrap failure caused by the statement that does not conform to ANSI standards #8576
  - Fix the issue that incorrect parameters are used in transaction retries #8638
- DDL
  - Change the default character set and collation of tables into `utf8mb4` #8590
  - Add the `ddl_reorg_batch_size` variable to control the speed of adding indexes #8614
  - Make the character set and collation options content in DDL case-insensitive #8611
  - Fix the issue of adding indexes for generated columns #8655

16.18.19.2 PD

- Fix the issue that some configuration items cannot be set to `0` in the configuration file #1334

- Check the undefined configuration when starting PD #1362
- Avoid transferring the leader to a newly created peer, to optimize the possible delay #1339
- Fix the issue that `RaftCluster` cannot stop caused by deadlock #1370

16.18.19.3 TiKV

- Avoid transferring the leader to a newly created peer, to optimize the possible delay #3878

16.18.19.4 Tools

- Lightning
  - Optimize the `analyze` mechanism on imported tables to increase the import speed
  - Support storing the checkpoint information to a local file
- TiDB Binlog
  - Fix the output bug of pb files that a table only with the primary key column cannot generate the pb event

16.18.20 TiDB 2.1 GA Release Notes

On November 30, 2018, TiDB 2.1 GA is released. See the following updates in this release. Compared with TiDB 2.0, this release has great improvements in stability, performance, compatibility, and usability.

16.18.20.1 TiDB

- SQL Optimizer
  - Optimize the selection range of `Index Join` to improve the execution performance
  - Optimize the selection of outer table for `Index Join` and use the table with smaller estimated value of Row Count the as the outer table
  - Optimize Join Hint `TIDB_SMJ` so that Merge Join can be used even without proper index available
  - Optimize Join Hint `TIDB_INLJ` to specify the Inner table to Join
  - Optimize correlated subquery, push down Filter, and extend the index selection range, to improve the efficiency of some queries by orders of magnitude
  - Support using Index Hint and Join Hint in the `UPDATE` and `DELETE` statement
  - Support pushing down more functions: `ABS/CEIL/FLOOR/IS TRUE/IS FALSE`

  - Optimize the constant folding algorithm for the `IF` and `IFNULL` built-in functions
  - Optimize the output of the `EXPLAIN` statement and use hierarchy structure to show the relationship between operators

- SQL executor

  - Refactor all the aggregation functions and improve execution efficiency of the `Stream` and `Hash` aggregation operators
  - Implement the parallel `Hash Aggregate` operators and improve the computing performance by 350% in some scenarios
  - Implement the parallel `Project` operators and improve the performance by 74% in some scenarios
  - Read the data of the Inner table and Outer table of `Hash Join` concurrently to improve the execution performance
  - Optimize the execution speed of the `REPLACE INTO` statement and increase the performance nearly by 10 times
  - Optimize the memory usage of the time data type and decrease the memory usage of the time data type by fifty percent
  - Optimize the point select performance and improve the point select efficiency result of Sysbench by 60%
  - Improve the performance of TiDB on inserting or updating wide tables by 20 times
  - Support configuring the memory upper limit of a single statement in the configuration file
  - Optimize the execution of Hash Join, if the Join type is Inner Join or Semi Join and the inner table is empty, return the result without reading data from the outer table
  - Support using the `EXPLAIN ANALYZE` statement to check the runtime statistics including the execution time and the number of returned rows of each operator

- Statistics

  - Support enabling auto ANALYZE statistics only during certain period of the day
  - Support updating the table statistics automatically according to the feedback of the queries
  - Support configuring the number of buckets in the histogram using the `ANALYZE TABLE WITH BUCKETS` statement
  - Optimize the Row Count estimation algorithm using histogram for mixed queries of equality query and range queries

- Expressions

  - Support following built-in function:
    * `json_contains`
    * `json_contains_path`
    * `encode/decode`

- Server
  - Support queuing the locally conflicted transactions within tidb-server instance to optimize the performance of conflicted transactions
  - Support Server Side Cursor
  - Add the HTTP API
    * Scatter the distribution of table Regions in the TiKV cluster
    * Control whether to open the `general log`
    * Support modifying the log level online
    * Check the TiDB cluster information
  - Add the `auto_analyze_ratio` system variables to contorl the ratio of Analyze
  - Add the `tidb_retry_limit` system variable to control the automatic retry times of transactions
  - Add the `tidb_disable_txn_auto_retry` system variable to control whether the transaction retries automatically
  - Support using`admin show slow` statement to obtain the slow queries
  - Add the `tidb_slow_log_threshold` environment variable to set the threshold of slow log automatically
  - Add the `tidb_query_log_max_len` environment variable to set the length of the SQL statement to be truncated in the log dynamically

- DDL
  - Support the parallel execution of the Add index statement and other statements to avoid the time consuming Add index operation blocking other operations
  - Optimize the execution speed of `ADD INDEX` and improve it greatly in some scenarios
  - Support the `select tidb_is_ddl_owner()` statement to facilitate deciding whether TiDB is `DDL Owner`
  - Support the `ALTER TABLE FORCE` syntax
  - Support the `ALTER TABLE RENAME KEY TO` syntax
  - Add the table name and database name in the output information of `admin show ddl jobs`

  - Support using the `ddl/owner/resign` HTTP interface to release the DDL owner and start electing a new DDL owner

- Compatibility

  - Support more MySQL syntaxes
  - Make the `BIT` aggregate function support the `ALL` parameter
  - Support the `SHOW PRIVILEGES` statement
  - Support the `CHARACTER SET` syntax in the `LOAD DATA` statement
  - Support the `IDENTIFIED WITH` syntax in the `CREATE USER` statement
  - Support the `LOAD DATA IGNORE LINES` statement
  - The `Show ProcessList` statement returns more accurate information

16.18.20.2 Placement Driver (PD)

- Optimize availability

  - Introduce the version control mechanism and support rolling update of the cluster compatibly
  - Enable `Raft PreVote` among PD nodes to avoid leader reelection when network recovers after network isolation
  - Enable `raft learner` by default to lower the risk of unavailable data caused by machine failure during scheduling
  - TSO allocation is no longer affected by the system clock going backwards
  - Support the `Region merge` feature to reduce the overhead brought by metadata

- Optimize the scheduler

  - Optimize the processing of Down Store to speed up making up replicas
  - Optimize the hotspot scheduler to improve its adaptability when traffic statistics information jitters
  - Optimize the start of Coordinator to reduce the unnecessary scheduling caused by restarting PD
  - Optimize the issue that Balance Scheduler schedules small Regions frequently
  - Optimize Region merge to consider the number of rows within the Region
  - Add more commands to control the scheduling policy
  - Improve PD simulator to simulate the scheduling scenarios

- API and operation tools

  - Add the `GetPrevRegion` interface to support the `TiDB reverse scan` feature
  - Add the `BatchSplitRegion` interface to speed up TiKV Region splitting
  - Add the `GCSafePoint` interface to support distributed GC in TiDB
  - Add the `GetAllStores` interface, to support distributed GC in TiDB
  - pd-ctl supports:
    * using statistics for Region split
    * calling `jq` to format the JSON output
    * checking the Region information of the specified store
    * checking topN Region list sorted by versions
    * checking topN Region list sorted by size
    * more precise TSO encoding
  - pd-recover doesn't need to provide the `max-replica` parameter

- Metrics
  - Add related metrics for `Filter`
  - Add metrics about etcd Raft state machine

- Performance
  - Optimize the performance of Region heartbeat to reduce the memory overhead brought by heartbeats
  - Optimize the Region tree performance
  - Optimize the performance of computing hotspot statistics

16.18.20.3 TiKV

- Coprocessor
  - Add more built-in functions
  - Add Coprocessor `ReadPool` to improve the concurrency in processing the requests
  - Fix the time function parsing issue and the time zone related issues
  - Optimize the memory usage for pushdown aggregation computing

- Transaction
  - Optimize the read logic and memory usage of MVCC to improve the performance of the scan operation and the performance of full table scan is 1 time better than that in TiDB 2.0
  - Fold the continuous Rollback records to ensure the read performance

  - Add the `UnsafeDestroyRange` API to support to collecting space for the dropping table/index
  - Separate the GC module to reduce the impact on write
  - Add the `upper bound` support in the `kv_scan` command

- Raftstore

  - Improve the snapshot writing process to avoid RocksDB stall
  - Add the `LocalReader` thread to process read requests and reduce the delay for read requests
  - Support `BatchSplit` to avoid large Region brought by large amounts of write
  - Support `Region Split` according to statistics to reduce the I/O overhead
  - Support `Region Split` according to the number of keys to improve the concurrency of index scan
  - Improve the Raft message process to avoid unnecessary delay brought by `Region Split`
  - Enable the `PreVote` feature by default to reduce the impact of network isolation on services

- Storage Engine

  - Fix the `CompactFiles`bug in RocksDB and reduce the impact on importing data using Lightning
  - Upgrade RocksDB to v5.15 to fix the possible issue of snapshot file corruption
  - Improve `IngestExternalFile` to avoid the issue that flush could block write

- tikv-ctl

  - Add the `ldb` command to diagnose RocksDB related issues
  - The `compact` command supports specifying whether to compact data in the bottommost level

16.18.20.4 Tools

- Fast full import of large amounts of data: TiDB Lightning
- Support new TiDB Binlog

16.18.20.5 Upgrade caveat

- TiDB 2.1 does not support downgrading to v2.0.x or earlier due to the adoption of the new storage engine
- Parallel DDL is enabled in TiDB 2.1, so the clusters with TiDB version earlier than 2.0.1 cannot upgrade to 2.1 using rolling update. You can choose either of the following two options:
  - Stop the cluster and upgrade to 2.1 directly
  - Roll update to 2.0.1 or later 2.0.x versions, and then roll update to the 2.1 version
- If you upgrade from TiDB 2.0.6 or earlier to TiDB 2.1, check if there is any ongoing DDL operation, especially the time consuming `Add Index` operation, because the DDL operations slow down the upgrading process. If there is ongoing DDL operation, wait for the DDL operation finishes and then roll update.

16.18.21 TiDB 2.1 RC5 Release Notes

On November 12, 2018, TiDB 2.1 RC5 is released. Compared with TiDB 2.1 RC4, this release has great improvement in stability, SQL optimizer, statistics information, and execution engine.

16.18.21.1 TiDB

- SQL Optimizer
  - Fix the issue that `IndexReader` reads the wrong handle in some cases #8132
  - Fix the issue occurred while the `IndexScan Prepared` statement uses `Plan Cache` #8055
  - Fix the issue that the result of the `Union` statement is unstable #8165
- SQL Execution Engine
  - Improve the performance of TiDB on inserting or updating wide tables #8024
  - Support the unsigned `int` flag in the `Truncate` built-in function #8068
  - Fix the error occurred while converting JSON data to the decimal type #8109
  - Fix the error occurred when you `Update` the float type #8170
- Statistics
  - Fix the incorrect statistics issue during point queries in some cases #8035
  - Fix the selectivity estimation of statistics for primary key in some cases #8149
  - Fix the issue that the statistics of deleted tables are not cleared up for a long period of time #8182
- Server

  - Improve the readability of logs and make logs better
    * #8063
    * #8053
    * #8224
  - Fix the error occurred when obtaining the table data of `infoschema.profiling` #8096
  - Replace the unix socket with the pumps client to write binlogs #8098
  - Add the threshold value for the `tidb_slow_log_threshold` environment variable, which dynamically sets the slow log #8094
  - Add the original length of a SQL statement truncated while the `tidb_query_log_max_len` environment variable dynamically sets logs #8200
  - Add the `tidb_opt_write_row_id` environment variable to control whether to allow writing `_tidb_rowid` #8218
  - Add an upper bound to the `Scan` command of ticlient, to avoid overbound scan #8081, #8247

- DDL
  - Fix the issue that executing DDL statements in transactions encounters an error in some cases #8056
  - Fix the issue that executing `truncate table` in partition tables does not take effect #8103
  - Fix the issue that the DDL operation does not roll back correctly after being cancelled in some cases #8057
  - Add the `admin show next_row_id` command to return the next available row ID #8268

16.18.21.2 PD

- Fix the issues related to `pd-ctl` reading the Region key
  - #1298
  - #1299
  - #1308
- Fix the issue that the `regions/check` API returns the wrong result #1311
- Fix the issue that PD cannot restart join after a PD join failure #1279
- Fix the issue that `watch leader` might lose events in some cases #1317

16.18.21.3 TiKV

- Improve the error message of `WriteConflict` #3750
- Add the panic mark file #3746
- Downgrade grpcio to avoid the segment fault issue caused by the new version of gRPC #3650
- Add an upper limit to the `kv_scan` interface #3749

16.18.21.4 Tools

- Support the TiDB-Binlog cluster, which is not compatible with the older version of binlog #8093, documentation

16.18.22 TiDB 2.1 RC4 Release Notes

On October 23, 2018, TiDB 2.1 RC4 is released. Compared with TiDB 2.1 RC3, this release has great improvement in stability, SQL optimizer, statistics information, and execution engine.

16.18.22.1 TiDB

- SQL Optimizer
  - Fix the issue that column pruning of `UnionAll` is incorrect in some cases #7941
  - Fix the issue that the result of the `UnionAll` operator is incorrect in some cases #8007
- SQL Execution Engine
  - Fix the precision issue of the `AVG` function #7874
  - Support using the `EXPLAIN ANALYZE` statement to check the runtime statistics including the execution time and the number of returned rows of each operator during the query execution process #7925
  - Fix the panic issue of the `PointGet` operator when a column of a table appears multiple times in the result set #7943
  - Fix the panic issue caused by too large values in the `Limit` subclause #8002
  - Fix the panic issue during the execution process of the `AddDate`/`SubDate` statement in some cases #8009
- Statistics
  - Fix the issue of judging the prefix of the histogram low-bound of the combined index as out of range #7856
  - Fix the memory leak issue caused by statistics collecting #7873
  - Fix the panic issue when the histogram is empty #7928
  - Fix the issue that the histogram bound is out of range when the statistics is being uploaded #7944
  - Limit the maximum length of values in the statistics sampling process #7982
- Server
  - Refactor Latch to avoid misjudgment of transaction conflicts and improve the execution performance of concurrent transactions #7711
  - Fix the panic issue caused by collecting slow queries in some cases #7874

  - Fix the panic issue when `ESCAPED BY` is an empty string in the `LOAD DATA` statement #8005
  - Complete the "coprocessor error" log information #8006

- Compatibility
  - Set the `Command` field of the `SHOW PROCESSLIST` result to `Sleep` when the query is empty #7839

- Expressions
  - Fix the constant folding issue of the `SYSDATE` function #7895
  - Fix the issue that `SUBSTRING_INDEX` panics in some cases #7897

- DDL
  - Fix the stack overflow issue caused by throwing the `invalid ddl job type` error #7958
  - Fix the issue that the result of `ADMIN CHECK TABLE` is incorrect in some cases #7975

16.18.22.2 PD

- Fix the issue that the tombstone TiKV is not removed from Grafana #1261
- Fix the data race issue when grpc-go configures the status #1265
- Fix the issue that the PD server gets stuck caused by etcd startup failure #1267
- Fix the issue that data race might occur during leader switching #1273
- Fix the issue that extra warning logs might be output when TiKV becomes tombstone #1280

16.18.22.3 TiKV

- Optimize the RocksDB Write stall issue caused by applying snapshots #3606
- Add raftstore `tick` metrics #3657
- Upgrade RocksDB and fix the Write block issue and that the source file might be damaged by the Write operation when performing `IngestExternalFile` #3661
- Upgrade grpcio and fix the issue that "too many pings" is wrongly reported #3650

16.18.23 TiDB 2.1 RC3 Release Notes

On September 29, 2018, TiDB 2.1 RC3 is released. Compared with TiDB 2.1 RC2, this release has great improvement in stability, compatibility, SQL optimizer, and execution engine.

16.18.23.1 TiDB

- SQL Optimizer
  - Fix the incorrect result issue when a statement contains embedded `LEFT OUTER JOIN` #7689
  - Enhance the optimization rule of predicate pushdown on the `JOIN` statement #7645
  - Fix the optimization rule of predicate pushdown for the `UnionScan` operator #7695
  - Fix the issue that the unique key property of the `Union` operator is not correctly set #7680
  - Enhance the optimization rule of constant folding #7696
  - Optimize the data source in which the filter is null after propagation to table dual #7756
- SQL Execution Engine
  - Optimize the performance of read requests in a transaction #7717
  - Optimize the cost of allocating Chunk memory in some executors #7540
  - Fix the "index out of range" panic caused by the columns where point queries get all NULL values #7790
- Server
  - Fix the issue that the memory quota in the configuration file does not take effect #7729
  - Add the `tidb_force_priority` system variable to set the execution priority for each statement #7694
  - Support using the `admin show slow` statement to obtain the slow query log #7785
- Compatibility
  - Fix the issue that the result of `charset/collation` is incorrect in `information_schema.schemata` #7751
  - Fix the issue that the value of the `hostname` system variable is empty #7750
- Expressions
  - Support the `init_vecter` argument in the `AES_ENCRYPT/AES_DECRYPT` built-in function #7425
  - Fix the issue that the result of `Format` is incorrect in some expressions #7770
  - Support the `JSON_LENGTH` built-in function #7739
  - Fix the incorrect result issue when casting the unsigned integer type to the decimal type #7792
- DML

  - Fix the issue that the result of the `INSERT ⋯ ON DUPLICATE KEY UPDATE` statement is incorrect while updating the unique key #7675

- DDL
  - Fix the issue that the index value is not converted between time zones when you create a new index on a new column of the timestamp type #7724
  - Support appending new values for the enum type #7767
  - Support creating an etcd session quickly, which improves the cluster availability after network isolation #7774

16.18.23.2 PD

- New feature
  - Add the API to get the Region list by size in reverse order #1254
- Improvement
  - Return more detailed information in the Region API #1252
- Bug fix
  - Fix the issue that `adjacent-region-scheduler` might lead to a crash after PD switches the leader #1250

16.18.23.3 TiKV

- Performance
  - Optimize the concurrency for coprocessor requests #3515
- New features
  - Add the support for Log functions #3603
  - Add the support for the `sha1` function #3612
  - Add the support for the `truncate_int` function #3532
  - Add the support for the `year` function #3622
  - Add the support for the `truncate_real` function #3633
- Bug fixes
  - Fix the reporting error behavior related to time functions #3487, #3615
  - Fix the issue that the time parsed from string is inconsistent with that in TiDB #3589

16.18.24 TiDB 2.1 RC2 Release Notes

On September 14, 2018, TiDB 2.1 RC2 is released. Compared with TiDB 2.1 RC1, this release has great improvement in stability, SQL optimizer, statistics information, and execution engine.

16.18.24.1 TiDB

- SQL Optimizer
  - Put forward a proposal of the next generation Planner #7543
  - Improve the optimization rules of constant propagation #7276
  - Enhance the computing logic of `Range` to enable it to handle multiple `IN` or `EQUAL` conditions simultaneously #7577
  - Fix the issue that the estimation result of `TableScan` is incorrect when `Range` is empty #7583
  - Support the `PointGet` operator for the `UPDATE` statement #7586
  - Fix the panic issue during the process of executing the `FirstRow` aggregate function in some conditions #7624
- SQL Execution Engine
  - Fix the potential `DataRace` issue when the `HashJoin` operator encounters an error #7554
  - Make the `HashJoin` operator read the inner table and build the hash table simultaneously #7544
  - Optimize the performance of Hash aggregate operators #7541
  - Optimize the performance of Join operators #7493, #7433
  - Fix the issue that the result of `UPDATE JOIN` is incorrect when the Join order is changed #7571
  - Improve the performance of Chunk's iterator #7585
- Statistics
  - Fix the issue that the auto Analyze work repeatedly analyzes the statistics #7550
  - Fix the statistics update error that occurs when there is no statistics change #7530
  - Use the RC isolation level and low priority when building `Analyze` requests #7496
  - Support enabling statistics auto-analyze on certain period of a day #7570
  - Fix the panic issue when logging the statistics information #7588
  - Support configuring the number of buckets in the histogram using the `ANALYZE TABLE WITH BUCKETS` statement #7619
  - Fix the panic issue when updating an empty histogram #7640
  - Update `information_schema.tables.data_length` using the statistics information #7657
- Server
  - Add Trace related dependencies #7532
  - Enable the `mutex profile` feature of Golang #7512
  - The `Admin` statement requires the `Super_priv` privilege #7486
  - Forbid users to `Drop` crucial system tables #7471
  - Switch from `juju/errors` to `pkg/errors` #7151
  - Complete the functional prototype of SQL Tracing #7016

  - Remove the goroutine pool #7564
  - Support viewing the goroutine information using the `USER1` signal #7587
  - Set the internal SQL to high priority while TiDB is started #7616
  - Use different labels to filter internal SQL and user SQL in monitoring metrics #7631
  - Store the top 30 slow queries in the last week to the TiDB server #7646
  - Put forward a proposal of setting the global system time zone for the TiDB cluster #7656
  - Enrich the error message of "GC life time is shorter than transaction duration" #7658
  - Set the global system time zone when starting the TiDB cluster #7638

- Compatibility

  - Add the unsigned flag for the `Year` type #7542
  - Fix the issue of configuring the result length of the `Year` type in the `Prepare` ↪ `/Execute` mode #7525
  - Fix the issue of inserting zero timestamp in the `Prepare/Execute` mode #7506
  - Fix the error handling issue of the integer division #7492
  - Fix the compatibility issue when processing `ComStmtSendLongData` #7485
  - Fix the error handling issue during the process of converting string to integer #7483
  - Optimize the accuracy of values in the `information_schema.columns_in_table` table #7463
  - Fix the compatibility issue when writing or updating the string type of data using the MariaDB client #7573
  - Fix the compatibility issue of aliases of the returned value #7600
  - Fix the issue that the `NUMERIC_SCALE` value of the float type is incorrect in the `information_schema.COLUMNS` table #7602
  - Fix the issue that Parser reports an error when the single line comment is empty #7612

- Expressions

  - Check the value of `max_allowed_packet` in the `insert` function #7528
  - Support the built-in function `json_contains` #7443
  - Support the built-in function `json_contains_path` #7596
  - Support the built-in function `encode/decode` #7622
  - Fix the issue that some time related functions are not compatible with the MySQL behaviors in some cases #7636
  - Fix the compatibility issue of parsing the time type of data in string #7654
  - Fix the issue that the time zone is not considered when computing the default value of the `DateTime` data #7655

- DML

  - Set correct `last_insert_id` in the `InsertOnDuplicateUpdate` statement #7534
  - Reduce the cases of updating the `auto_increment_id` counter #7515

  - Optimize the error message of `Duplicate Key` #7495
  - Fix the `insert...select...on duplicate key update` issue #7406
  - Support the `LOAD DATA IGNORE LINES` statement #7576

- DDL
  - Add the DDL job type and the current schema version information in the monitor #7472
  - Complete the design of the `Admin Restore Table` feature #7383
  - Fix the issue that the default value of the `Bit` type exceeds 128 #7249
  - Fix the issue that the default value of the `Bit` type cannot be `NULL` #7604
  - Reduce the interval of checking `CREATE TABLE/DATABASE` in the DDL queue #7608
  - Use the `ddl/owner/resign` HTTP interface ro release the DDL owner and start electing a new owner #7649

- TiKV Go Client
  - Support the issue that the `Seek` operation only obtains `Key` #7419

- Table Partition (Experimental)
  - Fix the issue that the `Bigint` type cannot be used as the partition key #7520
  - Support the rollback operation when an issue occurs during adding an index in the partitioned table #7437

16.18.24.2 PD

- Features
  - Support the `GetAllStores` interface #1228
  - Add the statistics of scheduling estimation in Simulator #1218

- Improvements
  - Optimize the handling process of down stores to make up replicas as soon as possible #1222
  - Optimize the start of Coordinator to reduce the unnecessary scheduling caused by restarting PD #1225
  - Optimize the memory usage to reduce the overhead caused by heartbeats #1195
  - Optimize error handling and improve the log information #1227
  - Support querying the Region information of a specific store in pd-ctl #1231
  - Support querying the topN Region information based on version comparison in pd-ctl #1233
  - Support more accurate TSO decoding in pd-ctl #1242

- Bug fix
  - Fix the issue that pd-ctl uses the `hot store` command to exit wrongly #1244

16.18.24.3 TiKV

- Performance
  - Support splitting Regions based on statistics estimation to reduce the I/O cost #3511
  - Reduce clone in the transaction scheduler #3530
- Improvements
  - Add the pushdown support for a large number of built-in functions
  - Add the `leader-transfer-max-log-lag` configuration to fix the failure issue of leader scheduling in specific scenarios #3507
  - Add the `max-open-engines` configuration to limit the number of engines opened by `tikv-importer` simultaneously #3496
  - Limit the cleanup speed of garbage data to reduce the impact on `snapshot apply` #3547
  - Broadcast the commit message for crucial Raft messages to avoid unnecessary delay #3592
- Bug fixes
  - Fix the leader election issue caused by discarding the `PreVote` message of the newly split Region #3557
  - Fix follower related statistics after merging Regions #3573
  - Fix the issue that the local reader uses obsolete Region information #3565

16.18.25 TiDB 2.1 RC1 Release Notes

On August 24, 2018, TiDB 2.1 RC1 is released! Compared with TiDB 2.1 Beta, this release has great improvement in stability, SQL optimizer, statistics information, and execution engine.

16.18.25.1 TiDB

- SQL Optimizer
  - Fix the issue that a wrong result is returned after the correlated subquery is decorrelated in some cases #6972
  - Optimize the output result of `Explain` #7011#7041
  - Optimize the choosing strategy of the outer table for `IndexJoin` #7019
  - Remove the Plan Cache of the non-`PREPARE` statement #7040
  - Fix the issue that the `INSERT` statement is not parsed and executed correctly in some cases #7068
  - Fix the issue that the `IndexJoin` result is not correct in some cases #7150
  - Fix the issue that the `NULL` value cannot be found using the unique index in some cases #7163

  - Fix the range computing issue of the prefix index in UTF-8 #7194
  - Fix the issue that result is not correct caused by eliminating the `Project` operator in some cases #7257
  - Fix the issue that `USE INDEX(PRIMARY)` cannot be used when the primary key is an integer #7316
  - Fix the issue that the index range cannot be computed using the correlated column in some cases #7357

- SQL Execution Engine

  - Fix the issue that the daylight saving time is not computed correctly in some cases #6823
  - Refactor the aggregation function framework to improve the execution efficiency of the `Stream` and `Hash` aggregation operators #6852
  - Fix the issue that the `Hash` aggregation operator cannot exit normally in some cases #6982
  - Fix the issue that `BIT_AND/BIT_OR/BIT_XOR` does not handle the non-integer data correctly #6994
  - Optimize the execution speed of the `REPLACE INTO` statement and increase the performance nearly 10 times #7027
  - Optimize the memory usage of time type data and decrease the memory usage of the time type data by fifty percent #7043
  - Fix the issue that the returned result is mixed with signed and unsigned integers in the `UNION` statement is not compatible with MySQL #7112
  - Fix the panic issue caused by the too much memory applied by `LPAD/RPAD` ↪ `/TO_BASE64/FROM_BASE64/REPEAT` #7171 #7266 #7409 #7431
  - Fix the incorrect result when `MergeJoin/IndexJoin` handles the `NULL` value #7255
  - Fix the incorrect result of `Outer Join` in some cases #7288
  - Improve the error message of `Data Truncated` to facilitate locating the wrong data and the corresponding field in the table #7401
  - Fix the incorrect result for `decimal` in some cases #7001 #7113 #7202 #7208
  - Optimize the point select performance #6937
  - Prohibit the isolation level of `Read Committed` to avoid the underlying problem #7211
  - Fix the incorrect result of `LTRIM/RTRIM/TRIM` in some cases #7291
  - Fix the issue that the `MaxOneRow` operator cannot guarantee that the returned result does not exceed one row #7375
  - Divide the Coprocessor requests with too many ranges #7454

- Statistics

  - Optimize the mechanism of statistics dynamic collection #6796
  - Fix the issue that `Auto Analyze` does not work when data is updated frequently #7022
  - Decrease the Write conflicts during the statistics dynamic update process #7124
  - Optimize the cost estimation when the statistics is incorrect #7175

  - Optimize the `AccessPath` cost estimation strategy #7233

- Server
  - Fix the bug in loading privilege information #6976
  - Fix the issue that the `Kill` command is too strict with privilege check #6954
  - Fix the issue of removing some binary numeric types #6922
  - Shorten the output log #7029
  - Handle the `mismatchClusterID` issue #7053
  - Add the `advertise-address` configuration item #7078
  - Add the `GrpcKeepAlive` option #7100
  - Add the connection or `Token` time monitor #7110
  - Optimize the data decoding performance #7149
  - Add the `PROCESSLIST` table in `INFORMMATION_SCHEMA` #7236
  - Fix the order issue when multiple rules are hit in verifying the privilege #7211
  - Change some default values of encoding related system variables to UTF-8 #7198
  - Make the slow query log show more detailed information #7302
  - Support registering tidb-server related information in PD and obtaining this information by HTTP API #7082

- Compatibility
  - Support Session variables `warning_count` and `error_count` #6945
  - Add `Scope` check when reading the system variables #6958
  - Support the `MAX_EXECUTION_TIME` syntax #7012
  - Support more statements of the `SET` syntax #7020
  - Add validity check when setting system variables #7117
  - Add the verification of the number of `PlaceHolders` in the `Prepare` statement #7162
  - Support `set character_set_results = null` #7353
  - Support the `flush status` syntax #7369
  - Fix the column size of `SET` and `ENUM` types in `information_schema` #7347
  - Support the `NATIONAL CHARACTER` syntax of statements for creating a table #7378
  - Support the `CHARACTER SET` syntax in the `LOAD DATA` statement #7391
  - Fix the column information of the `SET` and `ENUM` types #7417
  - Support the `IDENTIFIED WITH` syntax in the `CREATE USER` statement #7402
  - Fix the precision losing issue during `TIMESTAMP` computing process #7418
  - Support the validity verification of more `SYSTEM` variables #7196
  - Fix the incorrect result when the `CHAR_LENGTH` function computes the binary string #7410
  - Fix the incorrect `CONCAT` result in a statement involving `GROUP BY` #7448
  - Fix the imprecise type length issue when casting the `DECIMAL` type to the `STRING` type #7451

- DML
  - Fix the stability issue of the `Load Data` statement #6927
  - Fix the memory usage issue when performing some `Batch` operations #7086

  - Improve the performance of the `Replace Into` statement #7027
  - Fix the inconsistent precision issue when writing `CURRENT_TIMESTAMP` #7355

- DDL
  - Improve the method of DDL judging whether `Schema` is replicated to avoid misjudgement in some cases #7319
  - Fix the `SHOW CREATE TABLE` result in adding index process #6993
  - Allow the default value of `text/blob/json` to be NULL in non-restrict `sql-mode` #7230
  - Fix the `ADD INDEX` issue in some cases #7142
  - Increase the speed of adding `UNIQUE-KEY` index operation largely #7132
  - Fix the truncating issue of the prefix index in UTF-8 character set #7109
  - Add the environment variable `tidb_ddl_reorg_priority` to control the priority of the `add-index` operation #7116
  - Fix the display issue of `AUTO-INCREMENT` in `information_schema.tables` #7037
  - Support the `admin show ddl jobs <number>` command and support output specified number of DDL jobs #7028
  - Support parallel DDL job execution #6955

- Table Partition (Experimental)
  - Support top level partition
  - Support `Range Partition`

16.18.25.2 PD

- Features
  - Introduce the version control mechanism and support rolling update of the cluster with compatibility
  - Enable the `region merge` feature
  - Support the `GetPrevRegion` interface
  - Support splitting Regions in batch
  - Support storing the GC safepoint

- Improvements
  - Optimize the issue that TSO allocation is affected by the system clock going backwards
  - Optimize the performance of handling Region heartbeats
  - Optimize the Region tree performance
  - Optimize the performance of computing hotspot statistics
  - Optimize returning the error code of API interface
  - Add options of controlling scheduling strategies
  - Prohibit using special characters in `label`
  - Improve the scheduling simulator

  - Support splitting Regions using statistics in pd-ctl
  - Support formatting JSON output by calling `jq` in pd-ctl
  - Add metrics about etcd Raft state machine

- Bug fixes

  - Fix the issue that the namespace is not reloaded after switching Leader
  - Fix the issue that namespace scheduling exceeds the schedule limit
  - Fix the issue that hotspot scheduling exceeds the schedule limit
  - Fix the issue that wrong logs are output when the PD client closes
  - Fix the wrong statistics of Region heartbeat latency

16.18.25.3 TiKV

- Features

  - Support `batch split` to avoid too large Regions caused by the Write operation on hot Regions
  - Support splitting Regions based on the number of rows to improve the index scan efficiency

- Performance

  - Use `LocalReader` to separate the Read operation from the raftstore thread to lower the Read latency
  - Refactor the MVCC framework, optimize the memory usage and improve the scan Read performance
  - Support splitting Regions based on statistics estimation to reduce the I/O usage
  - Optimize the issue that the Read performance is affected by continuous Write operations on the rollback record
  - Reduce the memory usage of pushdown aggregation computing

- Improvements

  - Add the pushdown support for a large number of built-in functions and better charset support
  - Optimize the GC workflow, improve the GC speed and decrease the impact of GC on the system
  - Enable `prevote` to speed up service recovery when the network is abnormal
  - Add the related configuration items of RocksDB log files
  - Adjust the default configuration of `scheduler_latch`
  - Support setting whether to compact the data in the bottom layer of RocksDB when using tikv-ctl to compact data manually
  - Add the check for environment variables when starting TiKV
  - Support dynamically configuring the `dynamic_level_bytes` parameter based on the existing data
  - Support customizing the log format

  - Integrate tikv-fail in tikv-ctl
  - Add I/O metrics of threads

- Bug fixes

  - Fix decimal related issues
  - Fix the issue that `gRPC max_send_message_len` is set mistakenly
  - Fix the issue caused by misconfiguration of `region_size`

16.18.26 TiDB 2.1 Beta Release Notes

On June 29, 2018, TiDB 2.1 Beta is released! Compared with TiDB 2.0, this release has great improvement in stability, SQL optimizer, statistics information, and execution engine.

16.18.26.1 TiDB

- SQL Optimizer

  - Optimize the selection range of `Index Join` to improve the execution performance
  - Optimize correlated subquery, push down `Filter`, and extend the index range, to improve the efficiency of some queries by orders of magnitude
  - Support `Index Hint` and `Join Hint` in the `UPDATE` and `DELETE` statements
  - Validate Hint `TIDM_SMJ` when no available index exists
  - Support pushdown of the `ABS`, `CEIL`, `FLOOR`, `IS TRUE`, and `IS FALSE` functions
  - Handle the `IF` and `IFNULL` functions especially in the constant folding process

- SQL Execution Engine

  - Implement parallel `Hash Aggregate` operators and improve the computing performance of `Hash Aggregate` by 350% in some scenarios
  - Implement parallel `Project` operators and improve the performance by 74% in some scenarios
  - Read the data of the `Inner` table and `Outer` table of `Hash Join` concurrently to improve the execution performance
  - Fix incorrect results of `INSERT ⋯ ON DUPLICATE KEY UPDATE ⋯` in some scenarios
  - Fix incorrect results of the `CONCAT_WS`, `FLOOR`, `CEIL`, and `DIV` built-in functions

- Server

  - Add the HTTP API to scatter the distribution of table Regions in the TiKV cluster
  - Add the `auto_analyze_ratio` system variable to control the threshold value of automatic `Analyze`
  - Add the HTTP API to control whether to open the general log
  - Add the HTTP API to modify the log level online
  - Add the user information in the general log and the slow query log

  - Support the server side cursor

- Compatibility
  - Support more MySQL syntax
  - Make the `bit` aggregate function support the `ALL` parameter
  - Support the `SHOW PRIVILEGES` statement

- DML
  - Decrease the memory usage of the `INSERT INTO SELECT` statement
  - Fix the performance issue of `PlanCache`
  - Add the `tidb_retry_limit` system variable to control the automatic retry times of transactions
  - Add the `tidb_disable_txn_auto_retry` system variable to control whether the transaction tries automatically
  - Fix the accuracy issue of the written data of the `time` type
  - Support the queue of locally conflicted transactions to optimize the conflicted transaction performance
  - Fix `Affected Rows` of the `UPDATE` statement
  - Optimize the statement performance of `insert ignore on duplicate key update`

- DDL
  - Optimize the execution speed of the `CreateTable` statement
  - Optimize the execution speed of `ADD INDEX` and improve it greatly in some scenarios
  - Fix the issue that the number of added columns by `Alter table add column` exceeds the limit of the number of table columns
  - Fix the issue that DDL job retries lead to an increasing pressure on TiKV in abnormal conditions
  - Fix the issue that TiDB continuously reloads the schema information in abnormal conditions
  - Do not output the `FOREIGN KEY` related information in the result of `SHOW CREATE TABLE`
  - Support the `select tidb_is_ddl_owner()` statement to facilitate judging whether TiDB is `DDL Owner`
  - Fix the issue that the index is deleted in the `Year` type in some scenarios
  - Fix the renaming table issue in the concurrent execution scenario
  - Support the `AlterTableForce` syntax
  - Support the `AlterTableRenameIndex` syntax with `FromKey` and `ToKey`
  - Add the table name and database name in the output information of `admin show ddl jobs`

16.18.26.2 PD

- Enable Raft PreVote between PD nodes to avoid leader reelection when network recovers after network isolation
- Optimize the issue that Balance Scheduler schedules small Regions frequently
- Optimize the hotspot scheduler to improve its adaptability in traffic statistics information jitters
- Skip the Regions with a large number of rows when scheduling `region merge`
- Enable `raft learner` by default to lower the risk of unavailable data caused by machine failure during scheduling
- Remove `max-replica` from `pd-recover`
- Add `Filter` metrics
- Fix the issue that Region information is not updated after tikv-ctl unsafe recovery
- Fix the issue that TiKV disk space is used up caused by replica migration in some scenarios
- Compatibility notes
  - Do not support rolling back to v2.0.x or earlier due to update of the new version storage engine
  - Enable `raft learner` by default in the new version of PD. If the cluster is upgraded from 1.x to 2.1, the machine should be stopped before upgrade or a rolling update should be first applied to TiKV and then PD

16.18.26.3 TiKV

- Upgrade Rust to the `nightly-2018-06-14` version
- Enable `Raft PreVote` to avoid leader reelection generated when network recovers after network isolation
- Add a metric to display the number of files and `ingest` related information in each layer of RocksDB
- Print `key` with too many versions when GC works
- Use `static metric` to optimize multi-label metric performance (YCSB `raw get` is improved by 3%)
- Remove `box` in multiple modules and use patterns to improve the operating performance (YCSB `raw get` is improved by 3%)
- Use `asynchronous log` to improve the performance of writing logs
- Add a metric to collect the thread status
- Decease memory copy times by decreasing `box` used in the application to improve the performance

16.19 v2.0

16.19.1 TiDB 2.0.11 Release Notes

On January 03, 2019, TiDB 2.0.11 is released. The corresponding TiDB Ansible 2.0.11 is also released. Compared with TiDB 2.0.10, this release has great improvement in system compatibility and stability.

16.19.1.1 TiDB

- Fix the issue that the error is not handled properly when PD is in an abnormal condition #8764
- Fix the issue that the `Rename` operation on a table in TiDB is not compatible with that in MySQL #8809
- Fix the issue that the error message is wrongly reported when the `ADMIN CHECK TABLE` operation is performed in the process of executing the `ADD INDEX` statement #8750
- Fix the issue that the prefix index range is incorrect in some cases #8877
- Fix the panic issue of the `UPDATE` statement when columns are added in some cases #8904

16.19.1.2 TiKV

- Fix two issues about Region merge #4003, #4004

16.19.2 TiDB 2.0.10 Release Notes

On December 18, 2018, TiDB 2.0.10 is released. The corresponding TiDB Ansible 2.0.10 is also released. Compared with TiDB 2.0.9, this release has great improvement in system compatibility and stability.

16.19.2.1 TiDB

- Fix the possible issue caused by canceling a DDL job #8513
- Fix the issue that the `ORDER BY` and `UNION` clauses cannot quote the column including a table name #8514
- Fix the issue that the `UNCOMPRESS` function does not judge the incorrect input length #8607
- Fix the issue encountered by `ANSI_QUOTES SQL_MODE` when upgrading TiDB #8575
- Fix the issue that `select` returns the wrong result in some cases #8570
- Fix the possible issue that TiDB cannot exit when it receives the exit signal #8501
- Fix the issue that `IndexLookUpJoin` returns the wrong result in some cases #8508
- Avoid pushing down the filter containing `GetVar` or `SetVar` #8454
- Fix the issue that the result length of the `UNION` clauses is incorrect in some cases #8491
- Fix the issue of `PREPARE FROM @var_name` #8488
- Fix the panic issue when dumping statistics information in some cases #8464
- Fix the statistics estimation issue of point queries in some cases #8493
- Fix the panic issue when the returned default `enum` value is a string #8476
- Fix the issue that too much memory is consumed in the scenario of wide tables #8467
- Fix the issue encountered when Parser incorrectly formats the mod opcode #8431

- Fix the panic issue caused by adding foreign key constraints in some cases #8421, #8410
- Fix the issue that the `YEAR` column type incorrectly converts the zero value #8396
- Fix the panic issue occurred when the argument of the `VALUES` function is not a column #8404
- Disable Plan Cache for statements containing subqueries #8395

16.19.2.2 PD

- Fix the possible issue that RaftCluster cannot stop caused by deadlock #1370

16.19.2.3 TiKV

- Avoid transferring the leader to a newly created peer, to optimize the possible delay #3929
- Fix redundant Region heartbeats #3930

16.19.3 TiDB 2.0.9 Release Notes

On November 19, 2018, TiDB 2.0.9 is released. Compared with TiDB 2.0.8, this release has great improvement in system compatibility and stability.

16.19.3.1 TiDB

- Fix the issue caused by the empty statistics histogram #7927
- Fix the panic issue of the `UNION ALL` statement in some cases #7942
- Fix the stack overflow issue caused by wrong DDL Jobs #7959
- Add the slow log for the `Commit` operation #7983
- Fix the panic issue caused by the too large `Limit` value #8004
- Support specifying the `utf8mb4` character set in the `USING` clause #8048
- Make the `TRUNCATE` built-in function support parameters of unsigned integer type #8069
- Fix the selectivity estimation issue of the primary key for the statistics module in some cases #8150
- Add the `Session` variable to control whether `_tidb_rowid` is allowed to be written in #8126
- Fix the panic issue of `PhysicalProjection` in some cases #8154
- Fix the unstable results of the `Union` statement in some cases #8168
- Fix the issue that `NULL` is not returned by `values` in the non-`Insert` statement #8179
- Fix the issue that the statistics module cannot clear the outdated data in some cases #8184
- Make the maximum allowed running time for a transaction a configurable option #8209
- Fix the wrong comparison algorithm of `expression rewriter` in some cases #8288

- Eliminate the extra columns generated by the `UNION ORDER BY` statement #8307
- Support the `admin show next_row_id` statement #8274
- Fix the escape issue of special characters in the `Show Create Table` statement #8321
- Fix the unexpected errors in the `UNION` statement in some cases #8318
- Fix the issue that canceling a DDL job causes no rollback of a schema in some cases #8312
- Change `tidb_max_chunk_size` to a global variable #8333
- Add an upper bound to the `Scan` command of ticlient, to avoid overbound scan #8309 #8310

16.19.3.2 PD

- Fix the issue that the PD server gets stuck caused by etcd startup failure #1267
- Fix the issues related to `pd-ctl` reading the Region key #1298 #1299 #1308
- Fix the issue that the `regions/check` API returns the wrong result #1311
- Fix the issue that PD cannot restart join after a PD join failure #1279

16.19.3.3 TiKV

- Add the `end-key` limit to the `kv_scan` interface #3749
- Abandon the `max-tasks-xxx` configuration and add `max-tasks-per-worker-xxx` #3093
- Fix the `CompactFiles` issue in RocksDB #3789

16.19.4 TiDB 2.0.8 Release Notes

On October 16, 2018, TiDB 2.0.8 is released. Compared with TiDB 2.0.7, this release has great improvement in system compatibility and stability.

16.19.4.1 TiDB

- Improvement
  - Slow down the AUTO-ID increasing speed when the `Update` statement does not modify the corresponding AUTO-INCREMENT column #7846
- Bug fixes
  - Quickly create a new etcd session to recover the service when the PD leader goes down #7810
  - Fix the issue that the time zone is not considered when the default value of the `DateTime` type is calculated #7672
  - Fix the issue that `duplicate key update` inserts values incorrectly in some conditions #7685

- Fix the issue that the predicate conditions of `UnionScan` are not pushed down #7726
- Fix the issue that the time zone is not correctly handled when you add the `TIMESTAMP` index #7812
- Fix the memory leak issue caused by the statistics module in some conditions #7864
- Fix the issue that the results of `ANALYZE` cannot be obtained in some abnormal conditions #7871
- Do not fold the function `SYSDATE`, to ensure the returned results are correct #7894
- Fix the `substring_index` panic issue in some conditions #7896
- Fix the issue that `OUTER JOIN` is mistakenly converted to `INNER JOIN` in some conditions #7899

16.19.4.2 TiKV

- Bug fix
  - Fix the issue that the memory consumed by Raftstore `EntryCache` keeps increasing when a node goes down #3529

16.19.5 TiDB 2.0.7 Release Notes

On September 7, 2018, TiDB 2.0.7 is released. Compared with TiDB 2.0.6, this release has great improvement in system compatibility and stability.

16.19.5.1 TiDB

- New Feature
  - Add the `PROCESSLIST` table in `information_schema` #7286
- Improvement
  - Collect more details about SQL statement execution and output the information in the `SLOW QUERY` log #7364
  - Drop the partition information in `SHOW CREATE TABLE` #7388
  - Improve the execution efficiency of the `ANALYZE` statement by setting it to the RC isolation level and low priority #7500
  - Speed up adding a unique index #7562
  - Add an option of controlling the DDL concurrency #7563
- Bug Fixes
  - Fix the issue that `USE INDEX(PRIMARY)` cannot be used in a table whose primary key is an integer #7298

- Fix the issue that `Merge Join` and `Index Join` output incorrect results when the inner row is `NULL` #7301
- Fix the issue that `Join` outputs an incorrect result when the chunk size is set too small #7315
- Fix the panic issue caused by a statement of creating a table involving `range column` #7379
- Fix the issue that `admin check table` mistakenly reports an error of a time-type column #7457
- Fix the issue that the data with a default value `current_timestamp` cannot be queried using the `=` condition #7467
- Fix the issue that the zero-length parameter inserted by using the `ComStmtSendLongData` command is mistakenly parsed to NULL #7508
- Fix the issue that `auto analyze` is repeatedly executed in specific scenarios #7556
- Fix the issue that the parser cannot parse a single line comment ended with a newline character #7635

16.19.5.2 TiKV

- Improvement
  - Open the `dynamic-level-bytes` parameter in an empty cluster by default, to reduce space amplification
- Bug Fix
  - Update `approximate size` and `approximate keys count` of a Region after Region merging

16.19.6 TiDB 2.0.6 Release Notes

On August 6, 2018, TiDB 2.0.6 is released. Compared with TiDB 2.0.5, this release has great improvement in system compatibility and stability.

16.19.6.1 TiDB

- Improvements
  - Make "set system variable" log shorter to save disk space #7031
  - Record slow operations during the execution of `ADD INDEX` in the log, to make troubleshooting easier #7083
  - Reduce transaction conflicts when updating statistics #7138
  - Improve the accuracy of row count estimation when the values pending to be estimated exceeds the statistics range #7185
  - Choose the table with a smaller estimated row count as the outer table for `Index Join` to improve its execution efficiency #7277

  - Add the recover mechanism for panics occurred during the execution of `ANALYZE TABLE`, to avoid that the tidb-server is unavailable caused by abnormal behavior in the process of collecting statistics #7228
  - Return `NULL` and the corresponding warning when the results of `RPAD`/`LPAD` exceed the value of the `max_allowed_packet` system variable, compatible with MySQL #7244
  - Set the upper limit of placeholders count in the `PREPARE` statement to 65535, compatible with MySQL #7250

- Bug Fixes
  - Fix the issue that the `DROP USER` statement is incompatible with MySQL behavior in some cases #7014
  - Fix the issue that statements like `INSERT`/`LOAD DATA` meet OOM after opening `tidb_batch_insert` #7092
  - Fix the issue that the statistics fail to automatically update when the data of a table keeps updating #7093
  - Fix the issue that the firewall breaks inactive gPRC connections #7099
  - Fix the issue that prefix index returns a wrong result in some scenarios #7126
  - Fix the panic issue caused by outdated statistics in some scenarios #7155
  - Fix the issue that one piece of index data is missed after the `ADD INDEX` operation in some scenarios #7156
  - Fix the wrong result issue when querying `NULL` values using the unique index in some scenarios #7172
  - Fix the messy code issue of the `DECIMAL` multiplication result in some scenarios #7212
  - Fix the wrong result issue of `DECIMAL` modulo operation in some scenarios #7245
  - Fix the issue that the `UPDATE`/`DELETE` statement in a transaction returns a wrong result under some special sequence of statements #7219
  - Fix the panic issue of the `UNION ALL`/`UPDATE` statement during the process of building the execution plan in some scenarios #7225
  - Fix the issue that the range of prefix index is calculated incorrectly in some scenarios #7231
  - Fix the issue that the `LOAD DATA` statement fails to write the binlog in some scenarios #7242
  - Fix the wrong result issue of `SHOW CREATE TABLE` during the execution process of `ADD INDEX` in some scenarios #7243
  - Fix the issue that panic occurs when `Index Join` does not initialize timestamps in some scenarios #7246
  - Fix the false alarm issue when `ADMIN CHECK TABLE` mistakenly uses the timezone in the session #7258
  - Fix the issue that `ADMIN CLEANUP INDEX` does not clean up the index in some scenarios #7265
  - Disable the Read Committed isolation level #7282

16.19.6.2 TiKV

- Improvements
  - Enlarge scheduler's default slots to reduce false conflicts
  - Reduce continuous records of rollback transactions, to improve the Read performance when conflicts are extremely severe
  - Limit the size and number of RocksDB log files, to reduce unnecessary disk usage in long-running condition
- Bug Fixes
  - Fix the crash issue when converting the data type from string to decimal

16.19.7 TiDB 2.0.5 Release Notes

On July 6, 2018, TiDB 2.0.5 is released. Compared with TiDB 2.0.4, this release has great improvement in system compatibility and stability.

16.19.7.1 TiDB

- New Features
  - Add the `tidb_disable_txn_auto_retry` system variable which is used to disable the automatic retry of transactions #6877
- Improvements
  - Optimize the cost calculation of `Selection` to make the result more accurate #6989
  - Select the query condition that completely matches the unique index or the primary key as the query path directly #6966
  - Execute necessary cleanup when failing to start the service #6964
  - Handle `\N` as NULL in the `Load Data` statement #6962
  - Optimize the code structure of CBO #6953
  - Report the monitoring metrics earlier when starting the service #6931
  - Optimize the format of slow queries by removing the line breaks in SQL statements and adding user information #6920
  - Support multiple asterisks in comments #6858
- Bug Fixes
  - Fix the issue that `KILL QUERY` always requires SUPER privilege #7003
  - Fix the issue that users might fail to login when the number of users exceeds 1024 #6986
  - Fix an issue about inserting unsigned `float/double` data #6940
  - Fix the compatibility of the `COM_FIELD_LIST` command to resolve the panic issue in some MariaDB clients #6929
  - Fix the `CREATE TABLE IF NOT EXISTS LIKE` behavior #6928
  - Fix an issue in the process of TopN pushdown #6923
  - Fix the ID record issue of the currently processing row when an error occurs in executing `Add Index` #6903

16.19.7.2 PD

- Fix the issue that replicas migration uses up TiKV disks space in some scenarios
- Fix the crash issue caused by `AdjacentRegionScheduler`

16.19.7.3 TiKV

- Fix the potential overflow issue in decimal operations
- Fix the dirty read issue that might occur in the process of merging

16.19.8 TiDB 2.0.4 Release Notes

On June 15, 2018, TiDB 2.0.4 is released. Compared with TiDB 2.0.3, this release has great improvement in system compatibility and stability.

16.19.8.1 TiDB

- Support the `ALTER TABLE t DROP COLUMN a CASCADE` syntax
- Support configuring the value of `tidb_snapshot` to TSO
- Refine the display of statement types in monitoring items
- Optimize the accuracy of query cost estimation
- Configure the `backoff max delay` parameter of gRPC
- Support configuring the memory threshold of a single statement in the configuration file
- Refactor the error of Optimizer
- Fix the side effects of the `Cast Decimal` data
- Fix the wrong result issue of the `Merge Join` operator in specific scenarios
- Fix the issue of converting the Null object to String
- Fix the issue of casting the JSON type of data to the JSON type
- Fix the issue that the result order is not consistent with MySQL in the condition of `Union` + `OrderBy`
- Fix the compliance rules issue when the `Union` statement checks the `Limit/OrderBy` clause
- Fix the compatibility issue of the `Union All` result
- Fix a bug in predicate pushdown
- Fix the compatibility issue of the `Union` statement with the `For Update` clause
- Fix the issue that the `concat_ws` function mistakenly truncates the result

16.19.8.2 PD

- Improve the behavior of the unset scheduling argument `max-pending-peer-count` by changing it to no limit for the maximum number of `PendingPeer`s

16.19.8.3 TiKV

- Add the RocksDB `PerfContext` interface for debugging
- Remove the `import-mode` parameter
- Add the `region-properties` command for `tikv-ctl`
- Fix the issue that `reverse-seek` is slow when many RocksDB tombstones exist
- Fix the crash issue caused by `do_sub`
- Make GC record the log when GC encounters many versions of data

16.19.9 TiDB 2.0.3 Release Notes

On June 1, 2018, TiDB 2.0.3 is released. Compared with TiDB 2.0.2, this release has great improvement in system compatibility and stability.

16.19.9.1 TiDB

- Support modifying the log level online
- Support the `COM_CHANGE_USER` command
- Support using the `TIME` type parameters under the binary protocol
- Optimize the cost estimation of query conditions with the `BETWEEN` expression
- Do not display the `FOREIGN KEY` information in the result of `SHOW CREATE TABLE`
- Optimize the cost estimation for queries with the `LIMIT` clause
- Fix the issue about the `YEAR` type as the unique index
- Fix the issue about `ON DUPLICATE KEY UPDATE` in conditions without the unique index
- Fix the compatibility issue of the `CEIL` function
- Fix the accuracy issue of the `DIV` calculation in the `DECIMAL` type
- Fix the false alarm of `ADMIN CHECK TABLE`
- Fix the panic issue of `MAX/MIN` under specific expression parameters
- Fix the issue that the result of `JOIN` is null in special conditions
- Fix the `IN` expression issue when building and querying Range
- Fix a Range calculation issue when using `Prepare` to query and `Plan Cache` is enabled
- Fix the issue that the Schema information is frequently loaded in abnormal conditions

16.19.9.2 PD

- Fix the panic issue when collecting hot-cache metrics in specific conditions
- Fix the issue about scheduling of the obsolete Regions

16.19.9.3 TiKV

- Fix the bug that the learner flag mistakenly reports to PD
- Report an error instead of getting a result if `divisor/dividend` is 0 in `do_div_mod`

16.19.10 TiDB 2.0.2 Release Notes

On May 21, 2018, TiDB 2.0.2 is released. Compared with TiDB 2.0.1, this release has great improvement in system stability.

16.19.10.1 TiDB

- Fix the issue of pushing down the Decimal division expression
- Support using the `USE INDEX` syntax in the `Delete` statement
- Forbid using the `shard_row_id_bits` feature in columns with `Auto-Increment`
- Add the timeout mechanism for writing Binlog

16.19.10.2 PD

- Make the balance leader scheduler filter the disconnected nodes
- Modify the timeout of the transfer leader operator to 10s
- Fix the issue that the label scheduler does not schedule when the cluster Regions are in an unhealthy state
- Fix the improper scheduling issue of `evict leader scheduler`

16.19.10.3 TiKV

- Fix the issue that the Raft log is not printed
- Support configuring more gRPC related parameters
- Support configuring the timeout range of leader election
- Fix the issue that the obsolete learner is not deleted
- Fix the issue that the snapshot intermediate file is mistakenly deleted

16.19.11 TiDB 2.0.1 Release Notes

On May 16, 2018, TiDB 2.0.1 is released. Compared with TiDB 2.0.0 (GA), this release has great improvement in MySQL compatibility and system stability.

16.19.11.1 TiDB

- Update the progress of `Add Index` to the DDL job information in real time
- Add the `tidb_auto_analyze_ratio` session variable to control the threshold value of automatic statistics update
- Fix an issue that not all residual states are cleaned up when the transaction commit fails
- Fix a bug about adding indexes in some conditions

- Fix the correctness related issue when DDL modifies surface operations in some concurrent scenarios
- Fix a bug that the result of `LIMIT` is incorrect in some conditions
- Fix a capitalization issue of the `ADMIN CHECK INDEX` statement to make its index name case insensitive
- Fix a compatibility issue of the `UNION` statement
- Fix a compatibility issue when inserting data of `TIME` type
- Fix a goroutine leak issue caused by `copIteratorTaskSender` in some conditions
- Add an option for TiDB to control the behaviour of Binlog failure
- Refactor the `Coprocessor` slow log to distinguish between the scenario of tasks with long processing time and long waiting time
- Log nothing when meeting MySQL protocol handshake error, to avoid too many logs caused by the load balancer Keep Alive mechanism
- Refine the "Out of range value for column" error message
- Fix a bug when there is a subquery in an `Update` statement
- Change the behaviour of handling `SIGTERM`, and do not wait for all queries to terminate anymore

16.19.11.2 PD

- Add the `Scatter Range` scheduler to balance Regions with the specified key range
- Optimize the scheduling of Merge Region to prevent the newly split Region from being merged
- Add Learner related metrics
- Fix the issue that the scheduler is mistakenly deleted after restart
- Fix the error that occurs when parsing the configuration file
- Fix the issue that the etcd leader and the PD leader are not replicated
- Fix the issue that Learner still appears after it is closed
- Fix the issue that Regions fail to load because the packet size is too large

16.19.11.3 TiKV

- Fix the issue that `SELECT FOR UPDATE` prevents others from reading
- Optimize the slow query log
- Reduce the number of `thread_yield` calls
- Fix the bug that raftstore is accidentally blocked when generating the snapshot
- Fix the issue that Learner cannot be successfully elected in special conditions
- Fix the issue that split might cause dirty read in extreme conditions
- Correct the default value of the read thread pool configuration
- Speed up Delete Range

16.19.12 TiDB 2.0 Release Notes

On April 27, 2018, TiDB 2.0 GA is released! Compared with TiDB 1.0, this release has great improvement in MySQL compatibility, SQL optimizer, executor, and stability.

16.19.12.1 TiDB

- SQL Optimizer
  - Use more compact data structure to reduce the memory usage of statistics information
  - Speed up loading statistics information when starting a tidb-server process
  - Support updating statistics information dynamically experimental
  - Optimize the cost model to provide more accurate query cost evaluation
  - Use `Count-Min Sketch` to estimate the cost of point queries more accurately
  - Support analyzing more complex conditions to make full use of indexes
  - Support manually specifying the `Join` order using the `STRAIGHT_JOIN` syntax
  - Use the Stream Aggregation operator when the `GROUP BY` clause is empty to improve the performance
  - Support using indexes for the `MAX/MIN` function
  - Optimize the processing algorithms for correlated subqueries to support decorrelating more types of correlated subqueries and transform them to `Left Outer Join`
  - Extend `IndexLookupJoin` to be used in matching the index prefix
- SQL Execution Engine
  - Refactor all operators using the Chunk architecture, improve the execution performance of analytical queries, and reduce memory usage. There is a significant improvement in the TPC-H benchmark result.
  - Support the Streaming Aggregation operators pushdown
  - Optimize the `Insert Into Ignore` statement to improve the performance by over 10 times
  - Optimize the `Insert On Duplicate Key Update` statement to improve the performance by over 10 times
  - Optimize `Load Data` to improve the performance by over 10 times
  - Push down more data types and functions to TiKV
  - Support computing the memory usage of physical operators, and specifying the processing behavior in the configuration file and system variables when the memory usage exceeds the threshold
  - Support limiting the memory usage by a single SQL statement to reduce the risk of OOM
  - Support using implicit RowID in CRUD operations
  - Improve the performance of point queries
- Server
  - Support the Proxy Protocol
  - Add more monitoring metrics and refine the log
  - Support validating the configuration files
  - Support obtaining the information of TiDB parameters through HTTP API
  - Resolve Lock in the Batch mode to speed up garbage collection

  - Support multi-threaded garbage collection
  - Support TLS

- Compatibility

  - Support more MySQL syntaxes
  - Support modifying the `lower_case_table_names` system variable in the configuration file to support the OGG data replication tool
  - Improve compatibility with the Navicat management tool
  - Support displaying the table creating time in `Information_Schema`
  - Fix the issue that the return types of some functions/expressions differ from MySQL
  - Improve compatibility with JDBC
  - Support more SQL Modes

- DDL

  - Optimize the `Add Index` operation to greatly improve the execution speed in some scenarios
  - Attach a lower priority to the `Add Index` operation to reduce the impact on online business
  - Output more detailed status information of the DDL jobs in `Admin Show DDL Jobs`
  - Support querying the original statements of currently running DDL jobs using `Admin Show DDL Job Queries JobID`
  - Support recovering the index data using `Admin Recover Index` for disaster recovery
  - Support modifying Table Options using the `Alter` statement

16.19.12.2 PD

- Support `Region Merge`, to merge empty Regions after deleting data experimental
- Support `Raft Learner` experimental
- Optimize the scheduler

  - Make the scheduler to adapt to different Region sizes
  - Improve the priority and speed of restoring data during TiKV outage
  - Speed up data transferring when removing a TiKV node
  - Optimize the scheduling policies to prevent the disks from becoming full when the space of TiKV nodes is insufficient
  - Improve the scheduling efficiency of the balance-leader scheduler
  - Reduce the scheduling overhead of the balance-region scheduler
  - Optimize the execution efficiency of the the hot-region scheduler

- Operations interface and configuration

  - Support TLS

  - Support prioritizing the PD leaders
  - Support configuring the scheduling policies based on labels
  - Support configuring stores with a specific label not to schedule the Raft leader
  - Support splitting Region manually to handle the hotspot in a single Region
  - Support scattering a specified Region to manually adjust Region distribution in some cases
  - Add check rules for configuration parameters and improve validity check of the configuration items

- Debugging interface

  - Add the `Drop Region` debugging interface
  - Add the interfaces to enumerate the health status of each PD

- Statistics

  - Add statistics about abnormal Regions
  - Add statistics about Region isolation level
  - Add scheduling related metrics

- Performance

  - Keep the PD leader and the etcd leader together in the same node to improve write performance
  - Optimize the performance of Region heartbeat

16.19.12.3 TiKV

- Features

  - Protect critical configuration from incorrect modification
  - Support `Region Merge` experimental
  - Add the `Raw DeleteRange` API
  - Add the `GetMetric` API
  - Add `Raw Batch Put`, `Raw Batch Get`, `Raw Batch Delete` and `Raw Batch Scan`
  - Add Column Family options for the RawKV API and support executing operation on a specific Column Family
  - Support Streaming and Streaming Aggregation in Coprocessor
  - Support configuring the request timeout of Coprocessor
  - Carry timestamps with Region heartbeats
  - Support modifying some RocksDB parameters online, such as `block-cache-size`
  - Support configuring the behavior of Coprocessor when it encounters some warnings or errors
  - Support starting in the importing data mode to reduce write amplification during the data importing process
  - Support manually splitting Region in halves
  - Improve the data recovery tool `tikv-ctl`

  - Return more statistics in Coprocessor to guide the behavior of TiDB
  - Support the `ImportSST` API to import SST files experimental
  - Add the TiKV Importer binary to integrate with TiDB Lightning to import data quickly experimental

- Performance
  - Optimize read performance using `ReadPool` and increase the `raw_get/get/batch_get` by 30%
  - Improve metrics performance
  - Inform PD immediately once the Raft snapshot process is completed to speed up balancing
  - Solve performance jitter caused by RocksDB flushing
  - Optimize the space reclaiming mechanism after deleting data
  - Speed up garbage cleaning while starting the server
  - Reduce the I/O overhead during replica migration using `DeleteFilesInRanges`

- Stability
  - Fix the issue that gRPC call does not get returned when the PD leader switches
  - Fix the issue that it is slow to offline nodes caused by snapshots
  - Limit the temporary space usage consumed by migrating replicas
  - Report the Regions that cannot elect a leader for a long time
  - Update the Region size information in time according to compaction events
  - Limit the size of scan lock to avoid request timeout
  - Limit the memory usage when receiving snapshots to avoid OOM
  - Increase the speed of CI test
  - Fix the OOM issue caused by too many snapshots
  - Configure `keepalive` of gRPC
  - Fix the OOM issue caused by an increase of the Region number

16.19.12.4 TiSpark

TiSpark uses a separate version number. The current TiSpark version is 1.0 GA. The components of TiSpark 1.0 provide distributed computing of TiDB data using Apache Spark.

- Provide a gRPC communication framework to read data from TiKV
- Provide encoding and decoding of TiKV component data and communication protocol
- Provide calculation pushdown, which includes:
  - Aggregate pushdown
  - Predicate pushdown
  - TopN pushdown
  - Limit pushdown

- Provide index related support
  - Transform predicate into Region key range or secondary index

  - Optimize `Index Only` queries - Adaptively downgrade index scan to table scan per Region

- Provide cost-based optimization
  - Support statistics
  - Select index
  - Estimate broadcast table cost
- Provide support for multiple Spark interfaces
  - Support Spark Shell
  - Support ThriftServer/JDBC
  - Support Spark-SQL interaction
  - Support PySpark Shell
  - Support SparkR

16.19.13 TiDB 2.0 RC5 Release Notes

On April 17, 2018, TiDB 2.0 RC5 is released. This release has great improvement in MySQL compatibility, SQL optimization and stability.

16.19.13.1 TiDB

- Fix the issue about applying the `Top-N` pushdown rule
- Fix the estimation of the number of rows for the columns that contain NULL values
- Fix the zero value of the Binary type
- Fix the `BatchGet` issue within a transaction
- Clean up the written data while rolling back the `Add Index` operation, to reduce consumed space
- Optimize the `insert on duplicate key update` statement to improve the performance by 10 times
- Fix the issue about the type of the results returned by the `UNIX_TIMESTAMP` function
- Fix the issue that the NULL value is inserted while adding NOT NULL columns
- Support showing memory usage of the executing statements in the `Show Process List` statement
- Fix the issue that `Alter Table Modify Column` reports an error in extreme conditions
- Support setting the table comment using the `Alter` statement

16.19.13.2 PD

- Add support for Raft Learner
- Optimize the Balance Region Scheduler to reduce scheduling overhead
- Adjust the default value of `schedule-limit` configuration
- Fix the issue of allocating ID frequently
- Fix the compatibility issue when adding a new scheduler

16.19.13.3 TiKV

- Support the Region specified by `compact` in `tikv-ctl`
- Support Batch Put, Batch Get, Batch Delete and Batch Scan in the RawKVClient
- Fix the OOM issue caused by too many snapshots
- Return more detailed error information in Coprocessor
- Support dynamically modifying the `block-cache-size` in TiKV through `tikv-ctl`
- Further improve `importer`
- Simplify the `ImportSST::Upload` interface
- Configure the `keepalive` property of gRPC
- Split `tikv-importer` from TiKV as an independent binary
- Provide statistics about the number of rows scanned by each `scan range` in Coprocessor
- Fix the compilation issue on the macOS system
- Fix the issue of misusing a RocksDB metric
- Support the `overflow as warning` option in Coprocessor

16.19.14 TiDB 2.0 RC4 Release Notes

On March 30, 2018, TiDB 2.0 RC4 is released. This release has great improvement in MySQL compatibility, SQL optimization and stability.

16.19.14.1 TiDB

- Support `SHOW GRANTS FOR CURRENT_USER();`
- Fix the issue that the `Expression` in `UnionScan` is not cloned
- Support the `SET TRANSACTION` syntax
- Fix the potential goroutine leak issue in `copIterator`
- Fix the issue that `admin check table` misjudges the unique index including null
- Support displaying floating point numbers using scientific notation
- Fix the type inference issue during binary literal computing
- Fix the issue in parsing the `CREATE VIEW` statement
- Fix the panic issue when one statement contains both `ORDER BY` and `LIMIT 0`
- Improve the execution performance of `DecodeBytes`
- Optimize `LIMIT 0` to `TableDual`, to avoid building useless execution plans

16.19.14.2 PD

- Support splitting Region manually to handle the hot spot in a single Region
- Fix the issue that the label property is not displayed when `pdctl` runs `config show all`
- Optimize metrics and code structure

16.19.14.3 TiKV

- Limit the memory usage during receiving snapshots, to avoid OOM in extreme conditions
- Support configuring the behavior of Coprocessor when it encounters warnings
- Support importing the data pattern in TiKV
- Support splitting Region in the middle
- Increase the speed of CI test
- Use `crossbeam channel`
- Fix the issue that too many logs are output caused by leader missing when TiKV is isolated

16.19.15 TiDB 2.0 RC3 Release Notes

On March 23, 2018, TiDB 2.0 RC3 is released. This release has great improvement in MySQL compatibility, SQL optimization and stability.

16.19.15.1 TiDB

- Fix the wrong result issue of `MAX/MIN` in some scenarios
- Fix the issue that the result of `Sort Merge Join` does not show in order of Join Key in some scenarios
- Fix the error of comparison between `uint` and `int` in boundary conditions
- Optimize checks on length and precision of the floating point type, to improve compatibility with MySQL
- Improve the parsing error log of time type and add more error information
- Improve memory control and add statistics about `IndexLookupExecutor` memory
- Optimize the execution speed of `ADD INDEX` to greatly increase the speed in some scenarios
- Use the Stream Aggregation operator when the `GROUP BY` substatement is empty, to increase the speed
- Support closing the `Join Reorder` optimization in the optimizer using `STRAIGHT_JOIN`
- Output more detailed status information of DDL jobs in `ADMIN SHOW DDL JOBS`
- Support querying the original statements of currently running DDL jobs using `ADMIN SHOW DDL JOB QUERIES`
- Support recovering the index data using `ADMIN RECOVER INDEX` for disaster recovery
- Attach a lower priority to the `ADD INDEX` operation to reduce the impact on online business
- Support aggregation functions with JSON type parameters, such as `SUM/AVG`
- Support modifying the `lower_case_table_names` system variable in the configuration file, to support the OGG data replication tool
- Improve compatibility with the Navicat management tool
- Support using implicit RowID in CRUD operations

16.19.15.2 PD

- Support Region Merge, to merge empty Regions or small Regions after deleting data
- Ignore the nodes that have a lot of pending peers during adding replicas, to improve the speed of restoring replicas or making nodes offline
- Fix the frequent scheduling issue caused by a large number of empty Regions
- Optimize the scheduling speed of leader balance in scenarios of unbalanced resources within different labels
- Add more statistics about abnormal Regions

16.19.15.3 TiKV

- Support Region Merge
- Inform PD immediately once the Raft snapshot process is completed, to speed up balancing
- Add the Raw DeleteRange API
- Add the GetMetric API
- Reduce the I/O fluctuation caused by RocksDB sync files
- Optimize the space reclaiming mechanism after deleting data
- Improve the data recovery tool `tikv-ctl`
- Fix the issue that it is slow to make nodes down caused by snapshot
- Support streaming in Coprocessor
- Support Readpool and increase the `raw_get/get/batch_get` by 30%
- Support configuring the request timeout of Coprocessor
- Support streaming aggregation in Coprocessor
- Carry time information in Region heartbeats
- Limit the space usage of snapshot files to avoid consuming too much disk space
- Record and report the Regions that cannot elect a leader for a long time
- Speed up garbage cleaning when starting the server
- Update the size information about the corresponding Region according to compaction events
- Limit the size of `scan lock` to avoid request timeout
- Use `DeleteRange` to speed up Region deletion
- Support modifying RocksDB parameters online

16.19.16 TiDB 2.0 RC1 Release Notes

On March 9, 2018, TiDB 2.0 RC1 is released. This release has great improvement in MySQL compatibility, SQL optimization and stability.

16.19.16.1 TiDB

- Support limiting the memory usage by a single SQL statement, to reduce the risk of OOM

- Support pushing the Stream Aggregate operator down to TiKV
- Support validating the configuration file
- Support obtaining the information of TiDB configuration through HTTP API
- Compatible with more MySQL syntax in Parser
- Improve the compatibility with Navicat
- Improve the optimizer and extract common expressions with multiple OR conditions, to choose better query plan
- Improve the optimizer and convert subqueries to Join operators in more scenarios, to choose better query plan
- Resolve Lock in the Batch mode to increase the garbage collection speed
- Fix the length of Boolean field to improve compatibility
- Optimize the Add Index operation and give lower priority to all write and read operations, to reduce the impact on online business

16.19.16.2 PD

- Optimize the logic of code used to check the Region status to improve performance
- Optimize the output of log information in abnormal conditions to facilitate debugging
- Fix the monitor statistics that the disk space of TiKV nodes is not enough
- Fix the wrong reporting issue of the health interface when TLS is enabled
- Fix the issue that concurrent addition of replicas might exceed the threshold value of configuration, to improve stability

16.19.16.3 TiKV

- Fix the issue that gRPC call is not cancelled when PD leaders switch
- Protect important configuration which cannot be changed after initial configuration
- Add gRPC APIs used to obtain metrics
- Check whether SSD is used when you start the cluster
- Optimize the read performance using ReadPool, and improve the performance by 30% in the `raw get` test
- Improve metrics and optimize the usage of metrics

16.19.17 TiDB 1.1 Beta Release Notes

On February 24, 2018, TiDB 1.1 Beta is released. This release has great improvement in MySQL compatibility, SQL optimization, stability, and performance.

16.19.17.1 TiDB

- Add more monitoring metrics and refine the log
- Compatible with more MySQL syntax
- Support displaying the table creating time in `information_schema`

- Optimize queries containing the `MaxOneRow` operator
- Configure the size of intermediate result sets generated by Join, to further reduce the memory used by Join
- Add the `tidb_config` session variable to output the current TiDB configuration
- Fix the panic issue in the `Union` and `Index Join` operators
- Fix the wrong result issue of the `Sort Merge Join` operator in some scenarios
- Fix the issue that the `Show Index` statement shows indexes that are in the process of adding
- Fix the failure of the `Drop Stats` statement
- Optimize the query performance of the SQL engine to improve the test result of the Sysbench Select/OLTP by 10%
- Improve the computing speed of subqueries in the optimizer using the new execution engine; compared with TiDB 1.0, TiDB 1.1 Beta has great improvement in tests like TPC-H and TPC-DS

16.19.17.2 PD

- Add the Drop Region debug interface
- Support setting priority of the PD leader
- Support configuring stores with a specific label not to schedule Raft leaders
- Add the interfaces to enumerate the health status of each PD
- Add more metrics
- Keep the PD leader and the etcd leader together as much as possible in the same node
- Improve the priority and speed of restoring data when TiKV goes down
- Enhance the validity check of the `data-dir` configuration item
- Optimize the performance of Region heartbeat
- Fix the issue that hot spot scheduling violates label constraint
- Fix other stability issues

16.19.17.3 TiKV

- Traverse locks using offset + limit to avoid potential GC problems
- Support resolving locks in batches to improve GC speed
- Support GC concurrency to improve GC speed
- Update the Region size using the RocksDB compaction listener for more accurate PD scheduling
- Delete the outdated data in batches using `DeleteFilesInRanges`, to make TiKV start faster
- Configure the Raft snapshot max size to avoid the retained files taking up too much space
- Support more recovery operations in `tikv-ctl`
- Optimize the ordered flow aggregation operation
- Improve metrics and fix bugs

16.19.18 TiDB 1.1 Alpha Release Notes

On January 19, 2018, TiDB 1.1 Alpha is released. This release has great improvement in MySQL compatibility, SQL optimization, stability, and performance.

16.19.18.1 TiDB

- SQL parser
  - Support more syntax
- SQL query optimizer
  - Use more compact structure to reduce statistics info memory usage
  - Speed up loading statistics info when starting tidb-server
  - Provide more accurate query cost evaluation
  - Use `Count-Min Sketch` to estimate the cost of queries using unique index more accurately
  - Support more complex conditions to make full use of index
- SQL executor
  - Refactor all executor operators using Chunk architecture, improve the execution performance of analytical statements and reduce memory usage
  - Optimize performance of the `INSERT IGNORE` statement
  - Push down more types and functions to TiKV
  - Support more `SQL_MODE`
  - Optimize the `Load Data` performance to increase the speed by 10 times
  - Optimize the `Use Database` performance
  - Support statistics on the memory usage of physical operators
- Server
  - Support the PROXY protocol

16.19.18.2 PD

- Add more APIs
- Support TLS
- Add more cases for scheduling Simulator
- Schedule to adapt to different Region sizes
- Fix some bugs about scheduling

16.19.18.3 TiKV

- Support Raft learner
- Optimize Raft Snapshot and reduce the I/O overhead
- Support TLS
- Optimize the RocksDB configuration to improve performance
- Optimize `count (*)` and query performance of unique index in Coprocessor
- Add more failpoints and stability test cases
- Solve the reconnection issue between PD and TiKV
- Enhance the features of the data recovery tool `tikv-ctl`
- Support splitting according to table in Region
- Support the `Delete Range` feature
- Support setting the I/O limit caused by snapshot
- Improve the flow control mechanism

16.20 v1.0

16.20.1 TiDB 1.0.8 Release Notes

On February 11, 2018, TiDB 1.0.8 is released with the following updates:

16.20.1.1 TiDB

- Fix issues in the `Outer Join` result in some scenarios
- Optimize the performance of the `InsertIntoIgnore` statement
- Fix the issue in the `ShardRowID` option
- Add limitation (Configurable, the default value is 5000) to the DML statements number within a transaction
- Fix an issue in the Table/Column aliases returned by the `Prepare` statement
- Fix an issue in updating statistics delta
- Fix a panic error in the `Drop Column` statement
- Fix an DML issue when running the `Add Column After` statement
- Improve the stability of the GC process by ignoring the regions with GC errors
- Run GC concurrently to accelerate the GC process
- Provide syntax support for the `CREATE INDEX` statement

16.20.1.2 PD

- Reduce the lock overheat of the region heartbeats
- Fix the issue that a hot region scheduler selects the wrong Leader

16.20.1.3 TiKV

- Use `DeleteFilesInRanges` to clear stale data and improve the TiKV starting speed
- Using `Decimal` in Coprocessor sum
- Sync the metadata of the received Snapshot compulsorily to ensure its safety

To upgrade from 1.0.7 to 1.0.8, follow the rolling upgrade order of PD -> TiKV -> TiDB.

16.20.2 TiDB 1.0.7 Release Notes

On January 22, 2018, TiDB 1.0.7 is released with the following updates:

16.20.2.1 TiDB

- Optimize the `FIELD_LIST` command
- Fix data race of the information schema
- Avoid adding read-only statements to history
- Add the `session` variable to control the log query
- Fix the resource leak issue in statistics
- Fix the goroutine leak issue
- Add schema info API for the http status server
- Fix an issue about `IndexJoin`
- Update the behavior when `RunWorker` is false in DDL
- Improve the stability of test results in statistics
- Support `PACK_KEYS` syntax for the `CREATE TABLE` statement
- Add `row_id` column for the null pushdown schema to optimize performance

16.20.2.2 PD

- Fix possible scheduling loss issue in abnormal conditions
- Fix the compatibility issue with proto3
- Add the log

16.20.2.3 TiKV

- Support `Table Scan`
- Support the remote mode in tikv-ctl
- Fix the format compatibility issue of tikv-ctl proto
- Fix the loss of scheduling command from PD
- Add timeout in Push metric

To upgrade from 1.0.6 to 1.0.7, follow the rolling upgrade order of PD -> TiKV -> TiDB.

16.20.3 TiDB 1.0.6 Release Notes

On January 08, 2018, TiDB 1.0.6 is released with the following updates:

16.20.3.1 TiDB

- Support the `Alter Table Auto_Increment` syntax
- Fix the bug in Cost Based computation and the `Null Json` issue in statistics
- Support the extension syntax to shard the implicit row ID to avoid write hot spot for a single table
- Fix a potential DDL issue
- Consider the timezone setting in the `curtime`, `sysdate` and `curdate` functions
- Support the `SEPARATOR` syntax in the `GROUP_CONCAT` function
- Fix the wrong return type issue of the `GROUP_CONCAT` function.

16.20.3.2 PD

- Fix store selection problem of hot-region scheduler

16.20.3.3 TiKV

None.

To upgrade from 1.0.5 to 1.0.6, follow the rolling upgrade order of PD -> TiKV -> TiDB.

16.20.4 TiDB 1.0.5 Release Notes

On December 26, 2017, TiDB 1.0.5 is released with the following updates:

16.20.4.1 TiDB

- Add the max value for the current Auto_Increment ID in the `Show Create Table` statement.
- Fix a potential goroutine leak.
- Support outputting slow queries into a separate file.
- Load the `TimeZone` variable from TiKV when creating a new session.
- Support the schema state check so that the `Show Create Table`and `Analyze` statements process the public table/index only.
- The `set transaction read only` should affect the `tx_read_only` variable.
- Clean up incremental statistic data when rolling back.
- Fix the issue of missing index length in the `Show Create Table` statement.

16.20.4.2 PD

- Fix the issue that the leaders stop balancing under some circumstances.
  - 869
  - 874
- Fix potential panic during bootstrapping.

16.20.4.3 TiKV

- Fix the issue that it is slow to get the CPU ID using the `get_cpuid` function.
- Support the `dynamic-level-bytes` parameter to improve the space collection situation.

To upgrade from 1.0.4 to 1.0.5, follow the rolling upgrade order of PD -> TiKV -> TiDB.

16.20.5 TiDB 1.0.4 Release Notes

On December 11, 2017, TiDB 1.0.4 is released with the following updates:

16.20.5.1 TiDB

- Speed up the loading of the statistics when starting the `tidb-server`
- Improve the performance of the `show variables` statement
- Fix a potential issue when using the `Add Index` statement to handle the combined indexes
- Fix a potential issue when using the `Rename Table` statement to move a table to another database
- Accelerate the effectiveness for the `Alter/Drop User` statement

16.20.5.2 TiKV

- Fix a possible performance issue when a snapshot is applied
- Fix the performance issue for reverse scan after removing a lot of data
- Fix the wrong encoded result for the Decimal type under special circumstances

To upgrade from 1.0.3 to 1.0.4, follow the rolling upgrade order of PD -> TiKV -> TiDB.

16.20.6 TiDB 1.0.3 Release Notes

On November 28, 2017, TiDB 1.0.3 is released with the following updates:

16.20.6.1 TiDB

- Optimize the performance in transaction conflicts scenario
- Add the `TokenLimit` option in the config file
- Output the default database in slow query logs
- Remove the DDL statement from query duration metrics
- Optimize the query cost estimation
- Fix the index prefix issue when creating tables
- Support pushing down the expressions for the Float type to TiKV
- Fix the issue that it is slow to add index for tables with discrete integer primary index
- Reduce the unnecessary statistics updates
- Fix a potential issue during the transaction retry

16.20.6.2 PD

- Support adding more types of schedulers using API

16.20.6.3 TiKV

- Fix the deadlock issue with the PD client
- Fix the issue that the wrong leader value is prompted for `NotLeader`
- Fix the issue that the chunk size is too large in the coprocessor

To upgrade from 1.0.2 to 1.0.3, follow the rolling upgrade order of PD -> TiKV -> TiDB.

16.20.7 TiDB 1.0.2 Release Notes

On November 13, 2017, TiDB 1.0.2 is released with the following updates:

16.20.7.1 TiDB

- Optimize the cost estimation of index point query
- Support the `Alter Table Add Column (ColumnDef ColumnPosition)` syntax
- Optimize the queries whose `where` conditions are contradictory
- Optimize the `Add Index` operation to rectify the progress and reduce repetitive operations
- Optimize the `Index Look Join` operator to accelerate the query speed for small data size
- Fix the issue with prefix index judgment

16.20.7.2 Placement Driver (PD)

- Improve the stability of scheduling under exceptional situations

16.20.7.3 TiKV

- Support splitting table to ensure one region does not contain data from multiple tables
- Limit the length of a key to be no more than 4 KB
- More accurate read traffic statistics
- Implement deep protection on the coprocessor stack
- Fix the `LIKE` behavior and the `do_div_mod` bug

16.20.8 TiDB 1.0.1 Release Notes

On November 1, 2017, TiDB 1.0.1 is released with the following updates:

16.20.8.1 TiDB

- Support canceling DDL Job.
- Optimize the `IN` expression.
- Correct the result type of the `Show` statement.
- Support log slow query into a separate log file.
- Fix bugs.

16.20.8.2 TiKV

- Support flow control with write bytes.
- Reduce Raft allocation.
- Increase coprocessor stack size to 10MB.
- Remove the useless log from the coprocessor.

16.20.9 TiDB 1.0 Release Notes

On October 16, 2017, TiDB 1.0 is now released! This release is focused on MySQL compatibility, SQL optimization, stability, and performance.

16.20.9.1 TiDB

- The SQL query optimizer:
  - Adjust the cost model
  - Analyze pushdown
  - Function signature pushdown
- Optimize the internal data format to reduce the interim data size
- Enhance the MySQL compatibility
- Support the `NO_SQL_CACHE` syntax and limit the cache usage in the storage engine
- Refactor the Hash Aggregator operator to reduce the memory usage
- Support the Stream Aggregator operator

16.20.9.2 PD

- Support read flow based balancing
- Support setting the Store weight and weight based balancing

16.20.9.3 TiKV

- Coprocessor now supports more pushdown functions
- Support pushing down the sampling operation
- Support manually triggering data compact to collect space quickly
- Improve the performance and stability
- Add a Debug API for debugging
- TiSpark Beta Release:
- Support configuration framework
- Support ThriftSever/JDBC and Spark SQL

16.20.9.4 Acknowledgement

16.20.9.4.1 Special thanks to the following enterprises and teams

16.20.10 Pre-GA Release Notes

On August 30, 2017, TiDB Pre-GA is released! This release is focused on MySQL compatibility, SQL optimization, stability, and performance.

16.20.10.1 TiDB

- The SQL query optimizer:
  - Adjust the cost model
  - Use index scan to handle the `where` clause with the `compare` expression which has different types on each side
  - Support the Greedy algorithm based Join Reorder
- Many enhancements have been introduced to be more compatible with MySQL
- Support `Natural Join`
- Support the JSON type (Experimental), including the query, update and index of the JSON fields
- Prune the useless data to reduce the consumption of the executor memory
- Support configuring prioritization in the SQL statements and automatically set the prioritization for some of the statements according to the query type
- Completed the expression refactor and the speed is increased by about 30%

16.20.10.2 Placement Driver (PD)

- Support manually changing the leader of the PD cluster

16.20.10.3 TiKV

- Use dedicated Rocksdb instance to store Raft log
- Use `DeleteRange` to speed up the deleting of replicas
- Coprocessor now supports more pushdown operators
- Improve the performance and stability

16.20.10.4 TiDB Connector for Spark Beta Release

- Implement the predicates pushdown
- Implement the aggregation pushdown
- Implement range pruning
- Capable of running full set of TPC+H except for one query that needs view support

16.20.11 TiDB RC4 Release Notes

On August 4, 2017, TiDB RC4 is released! This release is focused on MySQL compatibility, SQL optimization, stability, and performance.

16.20.11.1 Highlight

- For performance, the write performance is improved significantly, and the computing task scheduling supports prioritizing to avoid the impact of OLAP on OLTP.
- The optimizer is revised for a more accurate query cost estimating and for an automatic choice of the `Join` physical operator based on the cost.
- Many enhancements have been introduced to be more compatible with MySQL.
- TiSpark is now released to better support the OLAP business scenarios. You can now use Spark to access the data in TiKV.

16.20.11.2 Detailed updates

16.20.11.2.1 TiDB

- The SQL query optimizer refactoring:
  - Better support for TopN queries
  - Support the automatic choice of the of the `Join` physical operator based on the cost

  - Improved Projection Elimination

- The version check of schema is based on Table to avoid the impact of DDL on the ongoing transactions
- Support `BatchIndexJoin`
- Improve the `Explain` statement
- Improve the `Index Scan` performance
- Many enhancements have been introduced to be more compatible with MySQL
- Support the JSON type and operations
- Support the configuration of query prioritizing and isolation level

16.20.11.2.2 Placement Driver (PD)

- Support using PD to set the TiKV location labels
- Optimize the scheduler
  - PD is now supported to initialize the scheduling commands to TiKV.
  - Accelerate the response speed of the region heartbeat.
  - Optimize the `balance` algorithm
- Optimize data loading to speed up failover

16.20.11.2.3 TiKV

- Support the configuration of query prioritizing
- Support the RC isolation level
- Improve Jepsen test results and the stability
- Support Document Store
- Coprocessor now supports more pushdown functions
- Improve the performance and stability

16.20.11.2.4 TiSpark Beta Release

- Implement the prediction pushdown
- Implement the aggregation pushdown
- Implement range pruning
- Capable of running full set of TPC-H except one query that needs view support

16.20.12 TiDB RC3 Release Notes

On June 16, 2017, TiDB RC3 is released! This release is focused on MySQL compatibility, SQL optimization, stability, and performance.

16.20.12.1 Highlight

- The privilege management is refined to enable users to manage the data access privileges using the same way as in MySQL.
- DDL is accelerated.
- The load balancing policy and process are optimized for performance.
- TiDB Ansible is open sourced. By using TiDB-Ansible, you can deploy, upgrade, start and shutdown a TiDB cluster with one click.

16.20.12.2 Detailed updates

16.20.12.3 TiDB

- The following features are added or improved in the SQL query optimizer:
  - Support incremental statistics
  - Support the `Merge Sort Join` operator
  - Support the `Index Lookup Join` operator
  - Support the `Optimizer Hint` Syntax
  - Optimize the memory consumption of the `Scan`, `Join`, `Aggregation` operators
  - Optimize the Cost Based Optimizer (CBO) framework
  - Refactor `Expression`
- Support more complete privilege management
- DDL acceleration
- Support using HTTP API to get the data distribution information of tables
- Support using system variables to control the query concurrency
- Add more MySQL built-in functions
- Support using system variables to automatically split a big transaction into smaller ones to commit

16.20.12.4 Placement Driver (PD)

- Support gRPC
- Provide the Disaster Recovery Toolkit
- Use Garbage Collection to clear stale data automatically
- Support more efficient data balance
- Support hot Region scheduling to enable load balancing and speed up the data importing
- Performance
  - Accelerate getting Client TSO
  - Improve the efficiency of Region Heartbeat processing
- Improve the `pd-ctl` function

  - Update the Replica configuration dynamically
  - Get the Timestamp Oracle (TSO)
  - Use ID to get the Region information

16.20.12.5 TiKV

- Support gRPC
- Support the Sorted String Table (SST) format snapshot to improve the load balancing speed of a cluster
- Support using the Heap Profile to uncover memory leaks
- Support Streaming SIMD Extensions (SSE) and speed up the CRC32 calculation
- Accelerate transferring leader for faster load balancing
- Use Batch Apply to reduce CPU usage and improve the write performance
- Support parallel Prewrite to improve the transaction write speed
- Optimize the scheduling of the coprocessor thread pool to reduce the impact of big queries on point get
- The new Loader supports data importing at the table level, as well as splitting a big table into smaller logical blocks to import concurrently to improve the data importing speed.

16.20.13 TiDB RC2 Release Notes

On March 1, 2017, TiDB RC2 is released! This release is focused on the compatibility with MySQL, SQL query optimizer, system stability and performance in this version. What's more, a new permission management mechanism is added and users can control data access in the same way as the MySQL privilege management system.

16.20.13.1 TiDB

- Query optimizer
  - Collect column/index statistics and use them in the query optimizer
  - Optimize the correlated subquery
  - Optimize the Cost Based Optimizer (CBO) framework
  - Eliminate aggregation using unique key information
  - Refactor expression evaluation framework
  - Convert Distinct to GroupBy
  - Support the topn operation push-down
- Support basic privilege management
- Add lots of MySQL built-in functions
- Improve the Alter Table statement and support the modification of table name, default value and comment
- Support the Create Table Like statement

- Support the Show Warnings statement
- Support the Rename Table statement
- Restrict the size of a single transaction to avoid the cluster blocking of large transactions
- Automatically split data in the process of Load Data
- Optimize the performance of the AddIndex and Delete statement
- Support "ANSI_QUOTES" sql_mode
- Improve the monitoring system
- Fix Bugs
- Solve the problem of memory leak

16.20.13.2 PD

- Support location aware replica scheduling
- Conduct fast scheduling based on the number of region
- pd-ctl support more features
  - Add or delete PD
  - Obtain Region information with Key
  - Add or delete scheduler and operator
  - Obtain cluster label information

16.20.13.3 TiKV

- Support Async Apply to improve the entire write performance
- Use prefix seek to improve the read performance of Write CF
- Use memory hint prefix to improve the insert performance of Raft CF
- Optimize the single read transaction performance
- Support more push-down expressions
- Improve the monitoring system
- Fix Bugs

16.20.14 TiDB RC1 Release Notes

On December 23, 2016, TiDB RC1 is released. See the following updates in this release:

16.20.14.1 TiKV

- The write speed has been improved.
- The disk space usage is reduced.
- Hundreds of TBs of data can be supported.
- The stability is improved and TiKV can support a cluster with 200 nodes.
- Supports the Raw KV API and the Golang client.

16.20.14.2 Placement Driver (PD)

- The scheduling strategy framework is optimized and now the strategy is more flexible and reasonable.
- The support for `label` is added to support Cross Data Center scheduling.
- PD Controller is provided to operate the PD cluster more easily.

16.20.14.3 TiDB

- The following features are added or improved in the SQL query optimizer:
  - Eager aggregation
  - More detailed `EXPLAIN` information
  - Parallelization of the `UNION` operator
  - Optimization of the subquery performance
  - Optimization of the conditional push-down
  - Optimization of the Cost Based Optimizer (CBO) framework
- The implementation of the time related data types are refactored to improve the compatibility with MySQL.
- More built-in functions in MySQL are supported.
- The speed of the `add index` statement is enhanced.
- The following statements are supported:
  - Use the `CHANGE COLUMN` statement to change the name of a column.
  - Use `MODIFY COLUMN` and `CHANGE COLUMN` of the `ALTER TABLE` statement for some of the column type transfer.

16.20.14.4 New tools

- `Loader` is added to be compatible with the `mydumper` data format in Percona and provides the following functions:
  - Multi-thread import
  - Retry if error occurs
  - Breakpoint resume
  - Targeted optimization for TiDB
- The tool for one-click deployment is added.

17 Glossary

17.1 A

17.1.1 ACID

ACID refers to the four key properties of a transaction: atomicity, consistency, isolation, and durability. Each of these properties is described below.

- **Atomicity** means that either all the changes of an operation are performed, or none of them are. TiDB ensures the atomicity of the Region that stores the Primary Key to achieve the atomicity of transactions.
- **Consistency** means that transactions always bring the database from one consistent state to another. In TiDB, data consistency is ensured before writing data to the memory.
- **Isolation** means that a transaction in process is invisible to other transactions until it completes. This allows concurrent transactions to read and write data without sacrificing consistency. TiDB currently supports the isolation level of `REPEATABLE READ`.
- **Durability** means that once a transaction is committed, it remains committed even in the event of a system failure. TiKV uses persistent storage to ensure durability.

17.2 B

17.2.1 Batch Create Table

Batch Create Table is a feature introduced in TiDB v6.0.0. This feature is enabled default. When restoring data with a large number of tables (nearly 50000) using BR (Backup & Restore), the feature can greatly speed up the restore process by creating tables in batches. For details, see Batch Create Table.

17.2.2 Baseline Capturing

Baseline Capturing captures queries that meet capturing conditions and create bindings for them. It is used for preventing regression of execution plans during an upgrade.

17.2.3 Bucket

A Region is logically divided into several small ranges called bucket. TiKV collects query statistics by buckets and reports the bucket status to PD. For details, see the Bucket design doc.

17.3 C

17.3.1 Cached Table

With the cached table feature, TiDB loads the data of an entire table into the memory of the TiDB server, and TiDB directly gets the table data from the memory without accessing TiKV, which improves the read performance.

17.3.2 Continuous Profiling

Introduced in TiDB 5.3.0, Continuous Profiling is a way to observe resource overhead at the system call level. With the support of Continuous Profiling, TiDB provides performance insight as clear as directly looking into the database source code, and helps R&D and operation and maintenance personnel to locate the root cause of performance problems using a flame graph. For details, see TiDB Dashboard Instance Profiling - Continuous Profiling.

17.4 D

17.4.1 Dynamic Pruning

Dynamic pruning mode is one of the modes that TiDB accesses partitioned tables. In dynamic pruning mode, each operator supports direct access to multiple partitions. Therefore, TiDB no longer uses Union. Omitting the Union operation can improve the execution efficiency and avoid the problem of Union concurrent execution.

17.5 I

17.5.1 Index Merge

Index Merge is a method introduced in TiDB v4.0 to access tables. Using this method, the TiDB optimizer can use multiple indexes per table and merge the results returned by each index. In some scenarios, this method makes the query more efficient by avoiding full table scans. Since v5.4, Index Merge has become a GA feature.

17.5.2 In-Memory Pessimistic Lock

The in-memory pessimistic lock is a new feature introduced in TiDB v6.0.0. When this feature is enabled, pessimistic locks are usually stored in the memory of the Region leader only, and are not persisted to disk or replicated through Raft to other replicas. This feature can greatly reduce the overhead of acquiring pessimistic locks and improve the throughput of pessimistic transactions.

17.6 L

17.6.1 leader/follower/learner

Leader/Follower/Learner each corresponds to a role in a Raft group of peers. The leader services all client requests and replicates data to the followers. If the group leader fails, one of the followers will be elected as the new leader. Learners are non-voting followers that only serves in the process of replica addition.

17.7 O

17.7.1 Old value

The "original value" in the incremental change log output by TiCDC. You can specify whether the incremental change log output by TiCDC contains the "original value".

17.7.2 Operator

An operator is a collection of actions that applies to a Region for scheduling purposes. Operators perform scheduling tasks such as "migrate the leader of Region 2 to Store 5" and "migrate replicas of Region 2 to Store 1, 4, 5".

An operator can be computed and generated by a scheduler, or created by an external API.

17.7.3 Operator step

An operator step is a step in the execution of an operator. An operator normally contains multiple Operator steps.

Currently, available steps generated by PD include:

- `TransferLeader`: Transfers leadership to a specified member
- `AddPeer`: Adds peers to a specified store
- `RemovePeer`: Removes a peer of a Region
- `AddLearner`: Adds learners to a specified store
- `PromoteLearner`: Promotes a specified learner to a voting member
- `SplitRegion`: Splits a specified Region into two

17.8 P

17.8.1 pending/down

"Pending" and "down" are two special states of a peer. Pending indicates that the Raft log of followers or learners is vastly different from that of leader. Followers in pending cannot

be elected as leader. "Down" refers to a state that a peer ceases to respond to leader for a long time, which usually means the corresponding node is down or isolated from the network.

17.8.2 Point Get

Point get means reading a single row of data by a unique index or primary index, the returned resultset is up to one row.

17.8.3 Predicate columns

In most cases, when executing SQL statements, the optimizer only uses statistics of some columns (such as columns in the `WHERE`, `JOIN`, `ORDER BY`, and `GROUP BY` statements). These used columns are called predicate columns. For details, see Collect statistics on some columns.

17.9 Q

17.9.1 Quota Limiter

Quota Limiter is an experimental feature introduced in TiDB v6.0.0. If the machine on which TiKV is deployed has limited resources, for example, with only 4v CPU and 16 G memory, and the foreground of TiKV processes too many read and write requests, the CPU resources used by the background are occupied to help process such requests, which affects the performance stability of TiKV. To avoid this situation, the quota-related configuration items can be set to limit the CPU resources to be used by the foreground.

17.10 R

17.10.1 Raft Engine

Raft Engine is an embedded persistent storage engine with a log-structured design. It is built for TiKV to store multi-Raft logs. Since v5.4, TiDB supports using Raft Engine as the log storage engine. For details, see Raft Engine.

17.10.2 Region/peer/Raft group

Region is the minimal piece of data storage in TiKV, each representing a range of data (96 MiB by default). Each Region has three replicas by default. A replica of a Region is called a peer. Multiple peers of the same Region replicate data via the Raft consensus algorithm, so peers are also members of a Raft instance. TiKV uses Multi-Raft to manage data. That is, for each Region, there is a corresponding, isolated Raft group.

17.10.3 Region split

Regions are generated as data writes increase. The process of splitting is called Region split.

The mechanism of Region split is to use one initial Region to cover the entire key space, and generate new Regions through splitting existing ones every time the size of the Region or the number of keys has reached a threshold.

17.10.4 restore

Restore is the reverse of the backup operation. It is the process of bringing back the system to an earlier state by retrieving data from a prepared backup.

17.11 S

17.11.1 scheduler

Schedulers are components in PD that generate scheduling tasks. Each scheduler in PD runs independently and serves different purposes. The commonly used schedulers are:

- `balance-leader-scheduler`: Balances the distribution of leaders
- `balance-region-scheduler`: Balances the distribution of peers
- `hot-region-scheduler`: Balances the distribution of hot Regions
- `evict-leader-{store-id}`: Evicts all leaders of a node (often used for rolling upgrades)

17.11.2 Store

A store refers to the storage node in the TiKV cluster (an instance of `tikv-server`). Each store has a corresponding TiKV instance.

17.12 T

17.12.1 Top SQL

Top SQL helps locate SQL queries that contribute to a high load of a TiDB or TiKV node in a specified time range. For details, see Top SQL user document.

17.12.2 TSO

Because TiKV is a distributed storage system, it requires a global timing service, Timestamp Oracle (TSO), to assign a monotonically increasing timestamp. In TiKV, such a feature

is provided by PD, and in Google Spanner, this feature is provided by multiple atomic clocks and GPS.
